I participate in rec.radio.cb because I'm a CBer. As far as 11 meter amps, I couldn't help anyone out with those as I've never owned or operated one. I'll tell anyone who is willing to listen to put that money "on the roof/tower." Ham radio is anything but boring. Take it easy.

As far as having Twistedhed as an ally, think of it this way. I have him as an ally as well as many anti-CBers or anti-illegals. ("The Reverend Fletcher...Felcher...WHATEVER!") The two sides are at each other's necks but nobody's really at mine...so who's the winner, me! The trick is to get both sides to meet each other part of the way, then we'll ALL be winners.

That's a pretty old radio. It must not use a PLL freq synthesizer (if it does, email me the chip number).
You might have to do a crystal trick on that rig. Open it up, figure out the mixing scheme, do the math and figure out what crystals you need to get you where you want to go.
For example:
A 14-crystal rig uses a 37.6 MHz oscillator for channels 1 to 4 and 37.65 for 5 to 8. Simple math tells us you would use a 37.55 crystal to gain 26.955, 26.935, 26.925 and 26.915 MHz.

A 12 crystal mixing scheme uses 23.290 oscillator for channels 1 through 4 and 23.340 for 5 to 8.
23.240 should give you the same results as above.

Crystals are available at... http://www.mouser.com I just bought a couple of 6.5536 MHz crystals. It cost me about $1.50.

Last, but not least, the disclaimer:
If you butch your radio and it stops working, I'm in no way responsible. This is basic frequency mixing theory. I've never done this myself.

Information provided here is for educational purposes only. Transmitting outside of the allocated CB freqs is against FCC rules. If you do it and they come to your house and jack you up, don't blame me: You are the one who broke the law.

Scaredy Cat wrote: Check thru the Google/Deja archives and see what this character stands for.
"Please do. And watch the headers."

Anyway, it is our contention that there is SOMETHING DEFINITELY WARPED with hams
who hang around in CB newsgroups discussing the "how to's" of 11 meter amps and channel mods. Regular ham radio must be boring to them. They seek the thrill of the illicit, or whatever.

"And you? You seek the thrill of hiding behind a keyboard hurling unfounded accusations about bers. Whenever cornered, you hiss like a cat, "What about the amps? What about the amps?" Fact is, that is a very small part of the folks on the air. Matter of fact, you and yours have mentioned it so many times and beat it to death when it is clear that is all you can rant about. You direct unfounded accusations at woever disagrees with you. You get no cigar. Your stuff is based on lies."

My name HAS appeared on one in the past loser. I was brought up on charges for doing "illegal" radio work. When they actually took the time to see that I was holding a first class ticket since the age of 17. they backed off. You see, once I got to the second class ticket, I was allowed to do radio work.......LEGALLY!

>
> "Explain the difference in bleed between my clean Tram on 27.405 and
> 27.415. Why would 415 'cause more bleed than 405?"
==========
Well twist lets forget the fact that 27.415 is an illegal freq, It would make not much if any difference but The freebamders are not relugated to just using 27.415, it is .555 and up/down a few kc's when you have a neighbor that is close a splatter box on channel 1-40 will wipe out 10 meters and the 2nd harmonic will cause splatter on 20 meters.

>

==========
Twistie I am far from a pup from Pa, when and where did I imply anything you say I did? If you run no power you are the exception to the rule not the norm. It is full of amps and echos and roger beeps. How do you actually know what you are bleeding unless someone says something, be it a fellow radio operator, ham or cb or a neighbors home. You have no special powers to know what is happening in there home when you transmit. But where did I say you or anyone else is messing up aviation or Ems bands. I said who ever is legal allowed to use there radios mainly 10 meters.

>

> to?"
==========
Better rejection I have tried about 5 different radios in receive mode,
Kenwood 850's, Ranger 2950, Galaxy Saturn, Cobra 29, Cobra 25, yasue101zd,
You name it its not the radio it is the closeness , it is the amp he is
using it is the overmodulated radio, it is the out of band operation. Why is
any of this fair to the "Legal Operator " who does have a license. It is
like getting on a highway and driving the Speed Limit(the Anti's) and the
rest of the pack is trying to run you off the road driving 85 + speeding and
careless driving. (The Keyclowns). Thats why there are rules that are to be
followed. Ok if you drive at night with less people you may get away with it
or at the least you won't be hassled. Try it during the day or rush hour,
you draw attention and will be fined or penalized. This is the same with
radio you don't bother anyone and yes you will get away with it, same with
smoking pot is it illegal hell yeah but people still do it, like it is not.

Hello Concrete Man NJ: I got to head back to DC in a few weeks or so.
Maybe I'll drop on in and see Sean and a few others.

Maybe we can pull a cork, tell lies, and shoot a few rabits. It works
when yours in the desert. Might have a few beers in some Hochie Couchey
place with Rock n Roll, dacin girls, Whooo hoooo! and get not invited
back!

Jay in the Great Mojave Desert, ... just down the road ah ways from
the fillin station.

Same station is down to 1.33 today 143 for super sludge, somewhere between
for mid-grade. We can get midgrade with ethanol at the no lead price. We
use the same gas tax formula as Wisconsin which makes it among the nation's
highest.

Um... no...

harmonics go up in frequency, not down. Since 20 meters is lower in
frequency than 10 meters is, the splatter from a dirty 11M box wouldn't
affect 20 at all..

the first harmonic from 27.555Mhz is 55.11Mhz, which is not in a HAM
band. The 2nd Harmonic is 82.665Mhz.. again not in a HAM band.

Hrm.. I'm not seeing anything in the 14 mhz (20 meter) band here, in the
potential harmonics for 11 meters.

Either your math is off, or you just went the wrong direction. Hope this
clears things up.

happens all the time just not with toll free because he runs his 5kw+ transmitter very cleanly. i also have a problem listening to 3922 because of the high powered and over modulated ham operators that run on 3925 and the same goes for the repeater part of ten meters. its called learning to share resources. only in a perfect world will you have a interference free band.

That's not harmonics, though, Tim.. That's "bleedover"... There's a big
difference. You won't find interference from the stations transmitting
at 3925 if you're listening at 1962...

Sounds familiar. Did you hear me?
"Unit 69 Chesapeake Bay in my small mobile around Maryland."
I would also throw in, "Operator Scott."

3154. Re: Don't operate illegal equipment you will get caught.

Newsgroup: rec.radio.cb
Date: 2001-06-27 23:22:01 UTC
From: twistedhed@webtv.net
Message-ID: <29439-3B3A6A99-94@storefull-124.iap.bryant.webtv.net>
Source record: 87245

"Twistedhed" <twistedhed@webtv.net> wrote in message:
"Explain the difference in bleed between my clean Tram on 27.405 and
27.415. Why would 415 'cause more bleed than 405?"
==========
Well twist lets forget the fact that 27.415 is an illegal freq, It
would make not much if any difference

"But it would. It is the crux of your argument here."

but The freebamders are not relugated to just using 27.415, it is .555
and up/down a few kc's when you have a neighbor that is close a splatter
box

"Now you changed the equation by adding another variable."

on channel 1-40 will wipe out 10 meters and the 2nd harmonic will cause
splatter on 20 meters.
Is that fair to the person who is legally allowed to use the freqs
assigned to him.

"I understand more about harmonics now than I ever did thanks to a
hammie in here who has been bagging alot of sand lately. I have always
been aware of how my station has affected others. I don't run a splatter
box and never have. If I lived in the flatlands or valleys, I don;t know
what I would run, I'd start with a good beam, but here I don't need lots
of power."

"Is WHAT fair? You are attempting to imply that everyone freebanding is
running power or bleeding someone. Imagine, in all the years I have been
playing radio I only had one instance where I interfered with something
and that was long ago and with a dirty 100 watt box through an antenna
with no real ground. I imagine I'm all wrong.. guess I need a pup from
PA to tell me that my barefoot radio bouncing off the water at 12 watts
ssb is wrecking the aviational and EMS bands."
==========
Twistie I am far from a pup from Pa, when and where did I imply anything
you say I did? If you run no power you are the exception to the rule not
the norm. It is full of amps and echos and roger beeps.

"Ok. I never said I never ran any power. I can tell you this, DX is my
favorite aspect of radio and I never ever needed more than a hundred
watts, including the 180 degree mark. Once that thrill was over I
decided to do it barefoot, then AM, etc."

How do you actually know what you are bleeding unless someone says
something, be it a fellow radio operator, ham or cb or a neighbors home.
You have no special powers to know what is happening in there home when

you transmit.

"Agreed. I know I'm not screwing up anybody's stuff for various reasons, but the main tip off is a complaint would usually surface before many years of said interference had passed, especially when one is familiar with the neighbors, agree?"

But where did I say you or anyone else is messing up aviation or Ems bands. I said who ever is legal allowed to use there radios mainly 10 meters.

"You are correct. You never said that. I never said you did."

And your on 27.580 while he is monitoring a qrp station in Guam or wherever. Like I said most Freeband Dxers are good ops just on illegal freqs.
"That is the first true claim you have set forth."
==========
Well that makes me 1 ahead of you anyway.
Imagine your on 27.580 trying to talk to Australia and Toll Free Keys up on Super Bowl 6 and blankets your receive on 27.585

"Then I would probably try and tag him and say, "Hey Toll, Hey Toll, Hey Toll , Hey Mr. Toll Free I dont know what you're running over there but you need to turn something down doggone it 'cause you are just making waves in the 'pile", and whether he took that as a compliment or technical advice really has nothing to do with me and is way beyond my control..
I already said I do not experience this bleed you speak of. Once in a great while, such as happened to me just the other day I will get some bleed that is heavier than usual. I was on channel 31 and followed the bleed to the bowl figuring it was one of the local boys. I was wrong, it was an old boy in Ky. with what I figure you would call a bleed box. I admit, I hung around waiting to see if he would ID what he was running but he didn't. He didn't bleed the other bands though."

"Usually doesn't happen thataway. I have some very big strappers near me. One bowl reg parks on the water near me and goes at it for a few. I flip the band and I don't hear him at all. I can hear some bleed from channel 4 to about 9, but he is only a stones throw from me. I like to listen to him 'cause he opens the DX door for me. Soon as he's done, I know I'm good for at least one or two that he tagged, or the ones he dusted off."
==========
I can imagine there are some real strappers near you, btw I know who Butt Butt is.How does he open the DX door for you? I thougth you ran barefoot. So your saying your barefoot radio gets its name called on the bowl when you want?

"When I want? Well, I guess you can say that, only I don't use the "Twisted" thing on the air all the time and I can only get heard on the bowl from the boat. Some can only be heard from the truck, I can only be

heard from the boat, dig it? I'm talking DX, not calling the FCC to record it, don'tchasee? If it will make you happy, I would be glad to explain how propagation works when one is on water with an Antron. For example, add a hundred watts with a wholelotta audio and it sounds like thousands of watts."

It won't make you real happy! Put the shoe on the other foot thats all think about what you may be doing. .
"I say better rejection in the radio. Hell, even my Galaxy won't get bleedover on 27.585 from the bowl. What kind of radios are you referring to?"
==========
Better rejection I have tried about 5 different radios in receive mode, Kenwood 850's, Ranger 2950, Galaxy Saturn, Cobra 29, Cobra 25, yasue101zd, You name it its not the radio it is the closeness ,

"Ok, now we are getting somewhere. How close is this dude to you? You should have just cut to the chase and asked for assistance on this thing."

it is the amp he is using it is the overmodulated radio,

"Or your antenna rejection if your radio checks out."

it is the out of band operation.

"Or not."

Why is any of this fair to the "Legal Operator " who does have a license.

"Come on now. You are mixing and choosing. Simply talking freeband does not equate running a splatter box. Even those that do run a so-called splatter box don't do it all day. When you hear one and it bothers you that much, grab a copy of QST and hit the throne for some relief."

It is like getting on a highway and driving the Speed Limit

"No, it isn't, and for many reasons. Poor analogy."

(the Anti's) and the rest of the pack is trying to run you off the road driving 85 + speeding and careless driving. (The Keyclowns). Thats why there are rules that are to be followed. Ok if you drive at night with less people you may get away with it or at the least you won't be hassled. Try it during the day or rush hour, you draw attention and will be fined or penalized. This is the same with radio you don't bother anyone and yes you will get away with it, same with smoking pot is it illegal hell yeah but people still do it, like it is not.

"I agree, bother no one."

And you're still right.

I've always had great results with a Firestik KW-7. It's big, but so is a CB radio wave. The reason cell phone antennas are so small is because they work on a much higher frequency. Frequency and wavelength are inversely proportional. As the frequency increases, the wavelength (and size of the RF wave) decreases. In conclusion, for best performance, use the largest antenna you can put on the car.

==========
I agree, If you keep in contact with your neighbor I can assume you
personally will know if you are bleeding over. Lots arent very friendly with
there neighbors and don't find out until its to late, or anyone can be
bleeding the 10 meter band if we were running power and wipe out some guys
recieve we wouldnt know about that unless he got really pissed and came a
lookin on your freq to tell you about it. Like I said Twist You are the
exception, if you don't run power, cuss and swear althought that is fun,
dump deadkeys, etc. I wish more would follow your footsteps.

Bleedover is one of those terms that needs a whole lot of definition.

First off, signals do have bandwidth even properly operated. Having problems at 3922 because of a strong LSB signal at 3925 is par for the course. The transmitter has a nominally 2.4 kHz filter but does pass more than that at a reduced level. The same can be said for the same filter operating in the receive mode. A three kHz separation is not going to cut it. Yes, some guys do get a little happy with the audio processing and broaden out considerably because of the audio harmonics.

We all know that attempting to get more than 1/2 carrier power on the audio sidebands will result in 'buckshot', multiple sidebands. We know that non-linear 'line-ee-ars' have a similar effect. But this half the carrier for audio rule has some more general applications.

To operate properly as a mixer - that is what a Class C AM final is BTW -- it is necessary for one signal to be at least 67% of the total. In the first mixer of a receiver, this means both that the local oscillator injection has to scream (and be applied to a balanced mixer to keep it out

of the mixer output for reasons we shall see) but that the mixer be matched to its next stage at all frequencies in the output. Reflected energy counts in the total and few mixers match to a filter at anything but its passband frequency. So the trick to having a receiver with good dynamic range is to limit the input to the mixer and deal with all of the outputs equally to prevent what amounts to high SWR at any frequency coming out of the mixer. When you see an attenuator on a receiver, the white flag is being waved.

So a strong adjacent channel signal can easily cause a soft front-end to collapse entirely simply by causing the local oscillator to fall below 67% of the total. Some piously chant 'Fundamental Overload' at this point in the proceedings. When the front-ends are as wide as a barn door as some of the TV tuners were and are the purpose of the high-pass filter is to keep the strong signal the hell out of the tuner; it might be many megahertz away.

Often it is really hard to tell just where a problem lies but it is not always the transmitter's fault.

The reality is that proper receiver design is a bit expensive, particularly where it is also necessary to prevent radiation from the receiver (a much bigger issue in Europe than here). For example, does anyone know of a CB rig with a balanced mixer front-end? Do you see a high-current FET between the mixer and the filter to give the mixer a 50 ohm load? What sort of bandpass filtering exists ahead of the mixer? What do you expect for a few hundred rasbuckniks?

While you are probably correct in most observations, I would not be quite so quick to think of the mine run of receivers to be God's gift to communication technology.

The crux is any type of freebanding is illegal and effects others who have a legitimate use for the frequency.

"This argument is so old but still offers nothing. Again I ask, who am I interfering with or affecting by barefoot freebanding on the channels just above 40?"

It is not squatters rights because you don't happen to hear anyone at the time you are talking.

"Look. Show me who those freqs are assigned to, then contact that entity and find if they still use the freqs, that will end your argument. They were mostly abandoned in favor of more modern modes of communication. You want a tangible analogy? Build a house in the woods and abandon it, and by abandoning I don't mean go away for awhile and come back..forget about it, let the weeds and road grow over and neglect the repairs. Someone WILL use it. Debating the righteousness of an act is a different matter."

It is not a hobby band.

"Yes it is, and it has been for quite some time. It was never DESIGNED that way, but then again neither was cb."

"Now you changed the equation by adding another variable."
==========
No you tried to pin it down to 1 channel over 40 like that is the entire freeband.
You are trying to control the equation don't try to change what i say to fit your answer. The Freeband, btw, What is the most popular frequency on the freeband. 27.555, 26.835, 27.580 ?

I agree, If you keep in contact with your neighbor I can assume you personally will know if you are bleeding over. Lots arent very friendly with there neighbors and don't find out until its to late, or anyone can be bleeding the 10 meter band if we were running power and wipe out some guys recieve we wouldnt know about that unless he got really pissed and came a lookin on your freq to tell you about it. Like I said Twist You are the exception, if you don't run power, cuss and swear althought that is fun, dump deadkeys, etc. I wish more would follow your footsteps.
"When I want? Well, I guess you can say that, only I don't use the "Twisted" thing on the air all the time and I can only get heard on the bowl from the boat. Some can only be heard from the truck, I can only be heard from the boat, dig it? I'm talking DX, not calling the FCC to record it, don'tchasee? If it will make you happy, I would be glad to explain how propagation works when one is on water with an Antron. For example, add a hundred watts with a wholelotta audio and it sounds like thousands of watts."
==========
If Mother Nature don't lift her skirt up I don't care how many miles out you are
you cannot creat conditions if they arent there. . I am sure the water aspect does help though.

"You got that right. No I don't curse, shout and raise hell. I use an extremely small bit of echo on AM. Not a repeat, not where it sounds like I'm in a barrel, just a tinge, ever so slight. I believe it enhances the audio sound to the receiving end (my personal choice). I also have a roger beep on some radios and I do not use it."

It won't make you real happy! Put the shoe on the other foot thats all think about what you may be doing. .
"I say better rejection in the radio. Hell, even my Galaxy won't get bleedover on 27.585 from the bowl. What kind of radios are you referring to?"
==========
Better rejection I have tried about 5 different radios in receive mode, Kenwood 850's, Ranger 2950, Galaxy Saturn, Cobra 29, Cobra 25,

yasue101zd, You name it its not the radio it is the closeness ,
"Ok, now we are getting somewhere. How close is this dude to you? You should have just cut to the chase and asked for assistance on this thing."
==========
500 foot max.

"Whaaaa? Someone is running a box 500 foot MAXIMUM from where you are located? I could bleed you with a walkie talkie from there."

"Come on now. You are mixing and choosing. Simply talking freeband does not equate running a splatter box. Even those that do run a so-called splatter box don't do it all day. When you hear one and it bothers you that much, grab a copy of QST and hit the throne for some relief."
==========
I hit the throne often but why should an illegal op force me to get off the air?

"You're right. He shouldn't."

(the Anti's) and the rest of the pack is trying to run you off the road driving 85 + speeding and careless driving. (The Keyclowns). Thats why there are rules that are to be followed. Ok if you drive at night with less people you may get away with it or at the least you won't be hassled. Try it during the day or rush hour, you draw attention and will be fined or penalized. This is the same with radio you don't bother anyone and yes you will get away with it, same with smoking pot is it illegal hell yeah but people still do it, like it is not.
"I agree, bother no one."
==========
If you bother no one You can pretty much do as you please.

"And I guess that is the gist of it. If someone is really busting your balls by running an amp less than 500 foot from your person, I don't see how you couldn't reach an amicable solution, 'cause you must be bleeding him as well."

Ok, Anti's, ICBS's, and the rest of you...

Got a great hypothetical & technical question for ya...

I recently found plans to convert a GrantXL/Cobra 148 to 6M use. I'm a tech class operator.

Is it illegal for me to convert the radio over to 6M, and then use it to transmit on 6M?

I know the answer to this question.. I'm just wondering if you're all up to speed.

There are no specified channel designations other than 9, however
usage of different channels have developed.unofficially. It differs in
different locations but usually 35-40 or 36-40 are used for SSB
communication, and channel 19 is used for mobile travel/info
purposes.

I don't know where you get your information, pinhead, but it doesn't
agree with my DD-214, or the address on all the letters sent and
received, or all the pictures I have, or all..... well, you get the
idea (maybe).

Perhaps you are confused: You see, each battallion of the 8th Regiment
rotated with each float as an attachment to either the 22nd or 24th
MAU. You may have looked up the records for personel assigned to the
24th MAU, not the attachments.

Also, I never retired, so again your information is incorrect. Care to
post your source?

Why should legal operators be compelled to compromise with illegals?
That doesn't make any sense at all. Legal operators have the right to
operate, but pirates forfeit that right every time they key up. The
only winner will be the pirates when the legal ops give some ground,
which will just encourage the pirates to take more.

I don't see any room for compromise.

Has anyone tried to add the second final and related components to an RCI 2990/2970 or similar rig? One that has the built in amp deck. I realize on the base version the power supply may be to weak on current but the amp section could be run on an external supply to get around this problem. Doing these mods would make the rig like a standard RCI 2950 driving something like a Texas Star 250 since the built in amp uses 2 X 2290 transistors like a TS 250. The factory has omitted one of the final transistors in the 2990/2970's to prolong the life of the built in amp and drive it easier and run cooler and probably because the built in power supply in the base unit would not provide the current needed. BUT you can drive a dual final 2950 into a TS 250 with no real problems as long as the SWR is good so why not add the extra final circuit to the 2990/2970 to drive the internal amp a little harder. With the addition of a cooling fan on the heat sink and the proper power supply current as well as setting up the final bias current to be equally shared between the two finals I would think it could be done with the result being the radio itself would drive the built in amp deck harder. Keeping the carrier low would be a must. One advantage to doing this would be, a person could actually turn the amp deck off and run just the radio and have the same output power as a standard 2950 or they could turn the amp deck on for more power. As it is normally, if you shut down the internal amp the single final rig doesn't produce much wattage by itself. The idea of all this is you can own a 2950 and a 2970 in the same rig. Or the two comparable base rigs maybe having to run an external power supply on the base rig which would be the same case if the 2950/2970 were used as a base.....NOW please notice that I did not mention anything about using this on 11 meters. The rigs I have mentioned are 10/12 meter radios.....not CB's therefore I have not said anything about illegal 11 meter operation and this is just a question to anyone that may have experimented just for the cause of wanting to know how it would work or what would happen. Also note that Texas Star amplifiers are legal amplifiers if not converted and when converted they can be used legally on certain bands other then 11 meters. Why did I ask this question in this NG? Because there are more amateur operators viewing this group then there seem to be in the amateur radio NG's. There are also more techs that seem to view this NG that are not afraid to experiment on a dummy load just to see "what if" and "how would it work" because they are curious. Flame on anyway.....

Mike

It is legal to do the mod and use the rig on 6m. However you have to be sure the output meets FCC emission spec's. Hopefully the mod addresses this issue by either telling you it was checked and found to be OK, or you will have to check it yourself, and do some output filter work if required to clean up the signal spectrum. If it's the last case then check with some local radio clubs because some have a spectrum analyzer than you can use to check the rig out with.

Lying Frank said: Why should legal operators be compelled to compromise with illegals?

"Keep off the freeband and you have no problem. But with a nose problem lik yours, that really isn't an ption, is it Frankie?"

That doesn't make any sense at all.
"Yea, we knew you couldn't figue it out. You're too busy lying about who you are and where you are still trying to play "Guess who I am, Guess who I am." We know who you are Whatever o whoever you want to call yourself is immaterial. I know you heard your call sign last week. The rest of the country sure did."

Legal operators have the right to operate, but pirates forfeit that right every time they key up.

"Your definition of anyrthing is already trashed, let alone what you call a pirate."

The only winner will be the pirates

"Uh, you already lost Franky baby. The "pirates" won long agao when the FCC died."

when the legal ops give some ground,

"What did you do? Hitchhike into the city for narcotics to obscure your judgement?"

which will just encourage the pirates to take more.
I don't see any room for compromise.

"Me neither, which is why you no longer have anyone that gives a damn what you say or believes any of it and associates you a tad bit higher than the cleanout drain to the sewer pipes in your quake damaged lean-to shack. Did your Cb get damaged? How about the antenna that you DON'T have? Can't post from your usual hiding place, chickenhawk?"

Interesting results. Did you do any tests by varying the height above ground of the field strength meter? The radiation pattern can be very different due to ground reflections for both antennas. You may find that one antenna has a higher field strength at larger take-off-angles than the other because of ground effects. What that simply means is more of your signal heats up the clouds at high take-off-angles.

If I get it right the difference in gain between the two antennas should be found by the following formula:

Gain Difference = 10 * Log((ratio of electric field strengths readings)^2)

The reason for the "electric field strength" squared is Power = (Volts^2) / R, where R = 377 ohms, the impedance of free space. The reading on your meter is proportional to the field strength in volts per meter. So taking the square of the ratio of the field strength readings gives you the ratio in power gain. The R and field strength proportionality factors then cancel out of the calculations. Then plugging that in to the formula for gain in db's gives the formula I wrote above.

So in your case that would be 10 * Log(1.3^2) or about 2.28 db, which is a little less than a half "S" unit by the way each "S" unit is assumed to be equal to 6 db.

My statement about loaded antennas and your measurements may both be right. Why? We are looking at two different things. Let me explain. To figure out how efficient an antenna really is we need to be able to completely enclose the antenna being tested by a closed surface. Then the "total energy flow" through that surface must be made. The ratio between what we measure being radiated and what is supplied is the antenna efficiency. Performing such a test, if it was physically possible, may show the second antenna with the higher field strength to be less efficient than the 1/4 wave whip. But due to the construction of the higher field strength antenna we get antenna gain compared to the 1/4 wave whip. However probing further around the antenna you may find in fact the field strength is in general lower than the 1/4 wave whip, except for those areas that you measured. That's why I asked about field strengths at other heights (take-off-angles) around the antenna. So what maybe happening is the construction of the antenna provides gain in a preferred direction over the 1/4 whip, and that gain is somewhat more than enough to compensate for the additional losses in the antenna. For just about any antenna we are really only interested in how well we radiate energy in a particular direction(s), any others would simply be sending energy to directions where there is nothing to receive it.

>>>friend, or a love one.

Assumption #1: It is not my job to enforce the law.
Response: It is my legal right, moral responsibility, and independant choice to enforce any law I see fit to enforce. But I am not enforcing -- or breaking -- any law by posting in this newsgroup.

Assumption #2: I get upset about the law being broken.
Response: I do not get upset about any CB law being broken. On the contrary, the more RF pirates that break the law the better.

Assumption #3: The breaking of the law does not directly harm me, a friend, or a loved one.
Response: RF pirates affect me directly in my work.

If you want a more comprehensive answer:
I choose to take a stand against illegal operators for several reasons, not the least of which is the lack of enforcement by the FCC. I am not a ham, and I do nothing directly for the benefit of any legal amateur radio operator. My actions are perfectly legal, and should be of no concern to you unless you operate illegally.

Fair enough?

Who's the pussy? Is 5am too early for you? WAAAAHHHH!!!!! You were the
one that wanted to do this. You were the one that was going to beat me
"like a redheaded stepchild". You were the one that told me to pick
the time a place. I let you pick the place, and I pick the time. 5am.
Are you going to be a "pussy" and whine that it's too early? Too bad.

Hello,
I have volumes 40,43,46,48,49 of these if you are still need of them.
I would let them go for $25.00 (includes shipping in USA)
Let me know whether or not you are intersted.
Thank you...

Who am i hurting when I grow marijuana, who am I hurting when I smoke it in my own home?, who am I hurting when I drive 80 mph at 6:00am? Who am hurting when I catch more fish than allowed too? Probably no one on all counts but they are all illegal and against the law or rule.

==========
You are correct on that account a slight bit of echo does make a am sound much better.

>
>
> "Whaaaa? Someone is running a box 500 foot MAXIMUM from where you are

==========
He, talks on Channel 36 and bleeds 10 meters easy, and when I am listening on 20 It tears up my reciever. When he unkeys I may have say a S-2/3 noise level when he talks S-7/9 of him, not intelligable of course but enough for me to lose anyone who isnt above this level.

> "And I guess that is the gist of it. If someone is really busting your

==========

I can bleed him at will If I like, barefoot and he can bleed me barefoot no doubt.
The amicable solution is i crank up the legaL Limit on 10 and start sending cq cq cq dx cq cq cq dx on RTTY, the I can try some HF Packet, Amtor, Pactor etc . Hell I can hit him with all guns blazing I can become what he is a Keyclown hehehe

==========
Your saying a 20-30 % increase, What is the 20-30 % equal too. Your best and most accurate way would be to get a reference point with your FSM. Key up with 5 watts with antenna #1 . Mark the spot on the FSM, Change antennas Key up again Check the FSM, Is It higher or lower than before,Then adjust your power to bring the FSM up or down to match your reference reading. Ok so antenna #1 at 5 watts gave a reading of X To get the reading of X with Antenna #2 I had to adjust the power level to say for maths sake 10 watts,this will produce the same FS as antenna #1, 10 watts is 2x the power of 5 watts so antenna 1 was 3db better. a rather easy more accurate method than just saying well it went up this much or that much. Also What Leland states is very true, radiation pattern and take off angle is key. How many people talk to someone 50 feet around them. 1 ,2 10 miles away will tell the true story.

Newsgroup: rec.radio.cb
Date: 2001-06-28 22:11:57 UTC
From: twistedhed@webtv.net
Message-ID: <11706-3B3BABAD-1@storefull-128.iap.bryant.webtv.net>
Source record: 87323

Lying Frankie said: Assumption #1: It is not my job to enforce the law.
Response: It is my legal right,

"In the form of a citizens arrest it is. How many of those have you made? That's what I thought."

moral responsibility,

"Talk about morals? YOU? HAHAHHAhahahahahahhahahhahhahaahahahahahahahahaha! After all that trash you hurled at cbers in here who dared disagree with you? Tell us about your morals Frank, when you went off the Prozac for a week and accused all the cbers in here of being fags and MUCH much worse. Morals. Mmph."

and independant choice to enforce any law I see fit to enforce. But I am not enforcing -- or breaking -- any law by posting in this newsgroup.

"There are laws against libel Sparky. You definitely committed libel and probably a few other laws, you just haven't been sued or prosecuted yet."

Assumption #2: I get upset about the law being broken. Response: I do not get upset about any CB law being broken.

"No. You get upset at me."

On the contrary, the more RF pirates that break the law the better.
Assumption #3: The breaking of the law does not directly harm me, a friend, or a loved one.
Response: RF pirates affect me directly in my work.
If you want a more comprehensive answer: I choose to take a stand against illegal operators for several reasons, not the least of which is the lack of enforcement by the FCC. I am not a ham, and I do nothing directly for the benefit of any legal amateur radio operator. My actions are perfectly legal, and should be of no concern to you unless you operate illegally.
Fair enough?

"No. How was that a more comprehensive answer on how RF affects you at work? It wasn't comprehensive at all. In fact, it had nothing to do with RF or your work at all.
You are not a law enforcement officer in any shape or form. How I operate does not affect you in any way, therefore it remains none of your business."

rci 2970/90 is not cb gear period. as long as you dont state a illegal intention like specifically saying your going to use it on cb then it is legal and theres nothing you can do to change it

>You, like many other dopes in this NG have a childish view of legalities. You
>operate under the delusion that you can advertise/sell/promote illegal CB
>gear safely as long as you say the magic words
>

"This argument is so old but still offers nothing. Again I ask, who am I interfering with or affecting by barefoot freebanding on the channels just above 40?"
==========
Who am i hurting when I grow marijuana, who am I hurting when I smoke it in my own home?, who am I hurting when I drive 80 mph at 6:00am? Who am hurting when I catch more fish than allowed too? Probably no one on all counts but they are all illegal and against the law or rule.

"The questions you refer to above may be better answered by their perspective governing agencies: Number 1- Who else is in your home at the time and does it physically bother them?
2-80 MPH AT 6:00 AM refer question to highway patrol. 3-Fish and Game commision of your state.
Am I going to give you hell for driving 80? Not if you don't run me off the road or bother me. Am I going to care if you catch ore fish than you should? Damn right I care. Am I going to confront you about it? No. I am going to continue to respect what I think is an honorable and much needed law, but I am not about to attempt to enforce said law. I figure people like that will get what's coming eventually and I can see how some may feel that way about freebanding. I on the other hand do not. Not one valid argument has been made on what barefoot talking on the freeband in question is going to harm. The proponents of keeping those bands locked away from cbers have no argument once the amplifier, IE harmonic bleed (Sorry Dick, dunno how else to express it) angle is deleted along with the 10 meter invasions."

"Look. Show me who those freqs are assigned to, then contact that entity and find if they still use the freqs, that will end your argument. They were mostly abandoned in favor of more modern modes of communication.
==========
That question would be better suited to the FCC and not me , I don't make the laws or enforce them I just try to follow them. usually.
"You got that right. No I don't curse, shout and raise hell. I use an extremely small bit of echo on AM. Not a repeat, not where it sounds like I'm in a barrel, just a tinge, ever so slight. I believe it enhances the audio sound to the receiving end (my personal choice). I also have a roger beep on some radios and I do not use it."
==========
You are correct on that account a slight bit of echo does make a am sound much better.
"Whaaaa? Someone is running a box 500 foot MAXIMUM from where you are located? I could bleed you with a walkie talkie from there."

==========
He, talks on Channel 36 and bleeds 10 meters easy, and when I am listening on 20 It tears up my reciever. When he unkeys I may have say a S-2/3 noise level when he talks S-7/9 of him, not intelligable of course but enough for me to lose anyone who isnt above this level.

"Alrighty then. I definitely can see how you may have an ax to grind. So, I must ask the inevitable, did you try to talk to the dude?"

"And I guess that is the gist of it. If someone is really busting your balls by running an amp less than 500 foot from your person, I don't see how you couldn't reach an amicable solution, 'cause you must be bleeding him as well."
==========
I can bleed him at will If I like, barefoot and he can bleed me barefoot no doubt.
The amicable solution is i crank up the legaL Limit on 10 and start sending cq cq cq dx cq cq cq dx on RTTY, the I can try some HF Packet, Amtor, Pactor etc . Hell I can hit him with all guns blazing I can become what he is a Keyclown hehehe

"I wouldn't call that a bad move if you went about it right. Doing it just to be vindictive isn't the way to go about it. Is he even aware he is doing this to you? I would CQ CQ CQ CQ with another operator somewhere and hold a conversation. If ALL else fails, you being licensed and him being a big bad law breaker with that dirty kicker, well as close as you are in proximity, I think I would start messing around and learning my way around signal and tone generators, experimenting with various things, ya' know? Now you're killing two birds with one stone."

3235. Subject: Headache...

Newsgroup: rec.radio.cb
Date: 2001-06-28 22:55:33 UTC
From: "Scott (Unit 69)" <upplus@hotmail.com>
Message-ID: <3B3BB5E5.DD18A116@hotmail.com>
Source record: 87324

Joe was a successful lawyer, but as he got older he was increasingly hampered by incredible headaches. When his career and love life started to suffer, he sought medical help. After being referred from one specialist to another, he finally came across an old country doctor who solved the headache problem.

"The good news is that I can cure your headaches. The bad news is that it will require castration. You have a very rare condition which causes your testicles to press up against the base of your spine. The pressure creates one hell of a headache. The only way to relieve the pressure is to remove your testicles."

Joe was shocked and depressed. He wondered if he had anything to live for. He could hardly concentrate long enough to answer, but decided he had no choice but to go under the knife.

When he left the hospital, he was without a headache for the first time in 20 years. But he felt like he was missing an important part of himself. As he walked down the street, he realized that he felt like a different person.

He could make a new beginning and live a new life!

He saw a men's clothing store and thought, "That's what I need -- a new suit."

He entered the shop and told the salesman, "I'd like a new suit." The elderly tailor eyed him briefly and said, "Let's see ... size 44 long." Joe laughed, "That's right, how did you know?" "Been in the business 60 years!"

Joe tried on the suit. It fit perfectly. As Joe admired himself in the mirror, the salesman asked, "How about a new shirt?" Joe thought for a moment and then said, "Sure." The salesman eyed Joe and said, "Let's see, 34 sleeve and, 16 1/2 neck.

Joe was surprised. "That's right, how did you know?" "Been in the business 60 years!" Joe tried on the shirt, and it fit perfectly. As Joe adjusted the collar in the mirror, the salesman asked, "How about new shoes?" Joe was on a roll and said, "Sure ..." The salesman eyed Joe's feet and said, "Let's see... 9-1/2...E." Joe was astonished, "That's right, how did you know?" "Been in the business 60 years!" Joe tried on the shoes and they fit perfectly.

Joe walked comfortably around the shop and the salesman asked, "How about some new underwear?" Joe thought for a second and said, "Sure..."

The salesman stepped back, eyed Joe's waist and said, "Let's see...size 36."

Joe laughed, "Ah ha! I got you! I've worn size 34 since I was 18 years old."

The salesman shook his head, "You can't wear a size 34. It will press your testicles up against the base of your spine and give you one hell of a headache."

Message-ID: <8d83b042.0106281640.62c5ae18@posting.google.com>
Source record: 87329

The real answer... it depends. While the long whip has a gain advantage... it's normally mounted on the corner of the vehicle which causes severe "directionality" problems. A 5/8 mounted in the center of the vehicle will perform better than a long whip in the corner. However, a long whip in the center of the vehicle is the ultimate performer.

The major problem is that paralleling two bi-polar transistors like
they do with the units you mention is largely ineffective and most of
the time is not done right. Just simply paralleling these transistors
without proper "ballasting" will cause one transistor to do a majority
of the work. If these were FETs than this practice would be
accepted...

By far... my experience for overall performance and practicality has
been the Wilson type antennas. The fiberglas antennas are too heavy
and stiff. This causes detachment problems in magnet mount
installations in windy or high speed conditions.

What about installing a spring on the mount? Seems like that's just asking for trouble, but I've seen them advertised.

Try this instead:
http://spike.geophys.washington.edu/recenteqs/Quakes/quakes0.html

These don't feel like any tremor I felt when I was stationed at 29
Palms. These are more like explosions that last about 1 to 3 seconds
and sound like a plane crashed in the front yard. I wasn't here for
the first dozen or so, but half-an-hour after I got home -- BOOM!!!
Cool stuff!

Doesn't anyone posting to this N.G.,realize that these trolls and flamers are government agents?All they are looking for is someone admitting they are operating illegally or selling illegal equipment.That is all they need!!! Finding out your name and address,that is the easy part.They don't need RDF equipment or even to leave their office.All it takes is a request for information to the National Security Agency,who monitors every phone call,any computer communications,cell phone even conversations in your own home.It isn't a joke,take all this very seriously.Be very cautious about who you let know what equipment your operating with and most of all DON'T TRUST ANYONE some people would turn you in just for the grins

Message-ID: <40U_6.2548$Rq5.206195@news.pacbell.net>
Source record: 87351

Hello,
Yes I will agree with both of
yours statement. We also did
a test with three different stations
1 station about 12:20
1 station about 4:30
1 station about 9:00

same style of test done with the whip
marking each stations meter with the strength
of the signal. Then the same test with the quad
wound, and it still beat out the whip in strength.
I'm not saying that in all applications this antenna
will beat them, only IMHO did it perform to my
expectations for me.
1 station was about 15 miles
1 about 25 miles
1 about 26 miles

Landshark

It is not possible. FRS radios (most of them) Have no possible way of
increasing power. Plus it is against FCC regulations. If you are looking
for a more powerful communications system, look at MURS, or GMRS.

No these are UHF FM radios theres no peaked or any of that anyhow they do .5 watts and thats the limit for them so there designed only for that much power

Ah, we've all been found out! Shucks. Actually, YOU are the only one on the newsgroup who is NOT a government agent. EVERYONE else is actually an agent, and our assignment for the past five years has been to identify and locate YOU and YOU ALONE. It's been quite a task locating your operating position, but if you look outside right now you will see an occasional vehicle drive by. Each and every one of them is also a government agent, and we are all listening to your radio and phone conversations as well as checking to see what television stations you are watching and which articles in the newspaper you read. Well, that one is tough because you don't subscribe daily and usually only look at the headlines at the convenience store, and then only at the tabloids. Have a nice day.

Gentlemen,
While your efforts to disuade the illegal use and sale of various types of ham / radio equiptment in this newsgroup and elswhere are noble indeed,
I am afraid that your threats and inuendos are in fact quite illegal in themselves. I suggest you contact the U.S. Attorney Generals office in Washington D.C. and confirm for yourselves. Just read them a sample of your postings and sit back and await an answer that will stun you.

You are in fact violating two federal laws and at least 6 states laws by your use of the internet and "other electronic means" to impede , interfere or otherwise disrupt the flow of electronic comerce and or disrupt any and all private electronic commerce systems. If you check you will also find out that your server in fact has a harrassment policy of its own in place and will in fact be getting in touch with you in the near future regarding the use of "their private system (yes it is their system you just use space on it) to threaten and harrass other system users in the electronic community.

Boy's it was a noble try , but alas you are in fact the ones breaking the law and bragging about it for all to read. I suggest you cease your threats. You have no more legal authority than anyone else.

Those of you out there who may be laughing take a note:
While we all know that some people are in fact in bussiness selling non fcc id'd equiptment and other various types of dealings, you could be found guilty by a jury if you ever slipp and state that you will in fact help or aid another in aquiring above equiptment, with the sole intent of thwarting the rules, laws and regulations of the United States of America .

Take heed everyone. There is a message here that should settle this attack. Be carefull what you say and what you do to others in the public / private airways. Big brother is always looking for a way to flex his muscle and he flexes it for anyone he deems.

Antikeyclowns please take heed of this message. It could in fact save you alot of agony in the future. A convicted felon cannot possess a fcc radio license boys.

Good luck and please behave,
Guido

It always was illegal for CB use since it is not type approved.
I believe it is legal for ham use either way.
There seems to be no way to expand the receive without the transmit.

Hi All
Man my car sucks, it puts out so much RF noise i can't hear a dam thing when the car is on. Even if i just turn the key on without starting the car the noise level is high.I have wires direct to the battery. The car is a 86 Dodge I'm running a Cobra 29 (but i've tried others) with a little wil. I think its getting in the antenna. Is there any filters that might help?
Roy

well then maybe a 5/8 ~ antenna would be good. There is the V5/8 which is
really nice or the IMAX-2000. But the only benefit these will give you is
lower radiation angle. If you have a lot of hills around you then maybe
another 1/2~ antenna would be ideal. Lower radiation angle will provide
more dx contacts as the reflected angle will be larger and possibly you'll
be able to hear more local people farther away.

Hello Lima2nj:

The MaCo V 5/8 wavelength ground plane antenna is a great for the money.

But like most CB Antennas there are a few down falls.

The V 5/8 when assembled per the factory assembly instruction sheet, will have a 1.0 to 1.0 SWR at a frequency below channel 1 (26.965 MHz). Quit a few guys here on the ng have told of matching problems with the V 5/8. They say that the antenna can not be tuned to a SWR of 1.0 to 1.0 with the adjustable tuning loop, and or antenna length. They are right. The best I could tune the antenna was 1.3 to 1.0 at the best SWR on the CB frequencies.

The reason for this is that the MaCo V5/8 antenna, the bottom vertical element has approx. 5 to 6 inches mounted inside a plastic or Teflon Insulator, that is mounted inside the base assembly. This has a lot of capacitance that loses a lot of signal energy. The impedance matching circuit on the V 5/8, takes this into consideration. If the lossy capacitance wasn't there the tuning loop would be much bigger. Some people would say that this capacitance was tuned out by the impedance matching circuit. WRONG! It simply allows the impedance matching device/circuit to less costly in production, at the expense of a lot of signal loss.

However I wish I had a dime every time I had heard someone say that they replaced their A99 with a MaCo V 5/8 and get a little bit better signal, and reduced or eliminated TVI problems.

The MaCo V5/8 antenna is made from a light weight, soft as butter aluminum tubing that seems to work pretty good in our Mojave Desert high winds that last for days at times.

I have modified the MaCo V 5/8 with a elevated vertical element (EVE) and modified the tuning loop, by throwing it away and adding on a couple of trombone tuning loops. Also added was a Top-Hat assembly, using 4 each 10 inch pieces of 1/8 dia aluminum rod. This makes the antenna look electrically longer, significantly reduces atmospheric noises, and makes for the tuning rods to be shorter.

The stock MaCo V5/8 is closer to a 1/2 wavelength than a 5/8 wavelength antenna. I added on a new piece of longer 1/2 diameter aluminum tubing with the Top-Hat assembly mounted at the top.

It looks different but kicks way more ass. And will take a few more truck loads of power.

Jay in the Mojave

Hummmm.... I have heard a lot about noise from the electric fuel pumps used on cars. Maybe you have the same problem. The fuel pump starts when you turn the key even if the engine is not running. If that is your case then you have to install a filter right at the fuel pump. It seems this problem is currently with new Fords by the way. Also the new vehicles that use an integrated high voltage coil in the lead to the spark plug seems to generate a lot of noise from reports I hear too.

If you're getting noise with the key on but the engine off, start looking at the fuel pump and other electrics which might be generating noise. The radio should be very quiet with the engine not running. No static at all. It might be easier to pull fuses one at a time to see which circuit is creating the problems. Once these are handled, then you can start the engine and deal with those matters. The trick here though is to isolate one problem at a time and fix it. You could easily have more than one 'problem'.

Defantly my friend . I do not check mail often enuff it seems, but I shall try in the future . I notice that a great deal of people feed off eachother which starts the ball rolling for some of the problems here. Only a Handfull actually know anything which would be the reason for the fighting. Jealousy runs deep in many people and possibly some may have some type of psycological problems. It has been a great many laughs at a few people and a great many smiles to those who try and continue on which at one time I so digintly pushed. People who attack when there is a disagreement in someones personal hobby seems illogical. Though people do not always act as rational as they should. To your trolls I am not one to say something and not back it up. Your continous attacking may escalate into a personal agenda for some. In Time you may learn that your attacks on eachother is a sign of weakness. Only the strong shall survive and the weak shall perish at the waste side . So I think you trolls should focus on me. Your simplistic minded procedures need to be worked on. Start by attacking the grammar and sentance structure I use, do not forget misspellings. That is always a good place to start. Well have a good time.

I am your asprin. Painkiller out.

Just got this sent to me via e-mail.

To: Proziac@hotmail.com
From: AntiKeyclowns@yahoo.com
Date: 06/28/01 12:33am

Dear Fellow AntiKeyclown,
We will be holding the first of several Nationwide Bonfire Vigils, This main goal here is to spread the word of Legal CB Operators and have all the illegal keyclowns drive down here with amplifiers, export radios, echo boards, and any other illegal devices in hand and toss them into the bonfire, The Resistance to our cause has been high, but if we make our presence felt at these rallys we will gain National Support. We expect to be at the next National Truckers Alliance meeting where we will bring up ways of getting these illegal devices out of these trucks amd off our streets. We also have received a substantial donation to help fund our cause. The name of the benefactor has not yet been released but we feel confident the money will keep pouring in as we get more support and a bigger following. The Fight has just begun and we are dedicated to cleaning up the ham bands as well as the Cb bands. For a $5.00 donation you can receive a Official Anti-Keyclown Patch, a anti keyclown Bumper sticker, and a monthly newsletter of our upcoming actions and a reading of the minutes at our Anti-Keyclown Board of Directors Meeting. So keep up the good work we hope to see you at a Bonfire Vigil in your area.

Doug Adair
Anti-Keyclown CEO
Anti Keyclown Founder

I would have gone to bed when I was sick instead of pretending the earth would go into a holding pattern if I weren't there for the day.

I would have talked less and listened more.

I would have invited friends over to dinner even if the carpet was stained, or the sofa faded.

I would have taken the time to listen to my grandfather ramble about his youth.

I would never have insisted the car windows be rolled up on a summer day because my hair had just been teased and sprayed.

There would have been more "I love you's."

...But mostly, given another shot at life, I would sieze every m inute...look at it and really see it .... live it...and never give it back.

Stop sweating the small stuff. Don't worry about who doesn't like you, who has more, or who's doing what. Instead, let's cherish the relationships we have with those who do love us.

Let's think about what God HAS blessed us with. And what we are doing each day to promote ourselves mentally, physically, emotionally, as well as spiritually. Life is too short to let it pass you by. We only have one shot at this and then it's gone.

I hope you all have a blessed day.

In the past two days you have accused me of:

- being N7;
- being BigBen;
- saying that I am from Issaquah;
- saying that I am from Clark County;
- deleting posts from all the usenet archives on the internet; and,
- forging posts that you wrote.

You have failed to prove any of your accusations. On the contrary, I have proven that:

- you are an idiot;
- you are a liar; and,
- you are a hypocrite.

What's on the menu for tomorrow? I can hardly wait....

The other responders are correct. Even if you could "peak" the radios, it would not have any effect on range. Experiments using similar UHF radios have shown that you'd have to get above five watts to make a significant difference. And that would eat up the batteries.

Read more about FRS walkie talkies in this week's US News & World Report (June 24th, "News You Can Use"). You will see references to Mr. Wilkerson and some other participants of this NG.

If you don't have access to the magazine, you can preview the article (minus photographs) at:

http://www.usnews.com/usnews/issue/010702/tech/walkie.htm

Hello There,

This is actually quite easy...All you have to do is solder a wire on
the ground or outside casing of the Audo Transformer (The small one
near the back of the radio) to the (+) side of the speaker. If you
add a 100ohm resistor in line it will cut back on the feedback and
sound pretty good. This is what I did and it worked really well.

3317. Battery setups the real deal.

Newsgroup: rec.radio.cb
Date: 2001-06-30 06:39:30 UTC
From: painki6669@aol.com
Message-ID: <20010630023930.29423.00001592@nso-fc.aol.com>
Source record: 87406

I notice going thru all the posts I could find over a few years which I have been off the board some people getting confused about battery setups and what type of batteries to use. Lots of people use " flooded " type batteries which are basically worthless when talking about consuming lots of amps over a very long period of time. They are just not made to perform well in that type of situation. In otherwords get rid of them. Gell cell batteries a little better but still suffer from water loss when over charging but have great Low maintence and a higher amp hour. Basically a Gell Cell is just electrolyte which is in a gell state. Hydrogen emissions are still high enuff to pose a danger in confined spaces. What you really want is an AGM (Asorbed Glass Mat) type battery for safety reasons since most setups are in vehicles. Who wants that acid smell in there Suburban or vehicle of there personal choosing. A AGM is not a gell cell what so ever and is considered a recombinant gas absorbed Electrolyte battery which in turn cuts water loss by 98% over gell cells. Discharge time is almost 10 times less than any gell cell on the market and nearly 50 times less than
normal automotive type used battieries. One more thing to say about them is that they do not have a current discharge and charge limitation like most gell cells. I thought I would actually add something to this newsgroup, considering most of the things said on this newsgroup are pure bullshit it seemed this would add a little spark to the newsgroup. Just popped in my head too is these types of batteries would be seen in humvees and I recall older mazda miatas came with agm aswell.
They are just not cheap. This technology was introduced to military use in the mid 80s but if you do not care about hydrogen at all I could show you some batteries that are just eleet hehe. Each weighing about 400lbs. Can easily do an easy 120 amp constant draw for 8 hours at 8 volts and is modular. So if a cell goes bad no problem you just pull it out and insert a new one HEH.Will do 1025ah @100h. AGM types say an 8d type but AGM not flooded type does about 300ah@100. Basically shown as 1025 devided by 100 = 10.25 amps constant for say 4 days hehe. You can up the discharge to say and the numbers look significant then to most .
10.25 amps does not seem like a lot but at a 4 hour discharge you are talking 250amps constant draw. Basically run a 32 pill on a dead motor and not lose any volts useing 3 6volts in series each which are only like 315lbs per (22-11 1/4 -18 1/4) not really big for a battery when you look at the output. Owell maybe ill speak later have to design a wind powered thing for somebody in belize so I am hard at work . You all take care ..

loving it.

It seems to me that if someone is smart enough to perform this mod without detailed instructions, they would be smart enough to steer clear of the lower portion of the 10 meter band (28.0 to 29.7 MHz). I knew enough before I was licensed to stay well below 10 meters.

The information I choose to pass along is for educational purposes only. In fact, such experimentation led me to obtain my ham license. I watched a buddy of mine make a 10 meter CW contact on my "illegal" cb. I was studying to get my ticket the next day.

It also seems to me that most CBers would be shocked if they happened to tune across the 75 meter band.

Maybe we should clean out our own sandbox before we go play in another one.

Interesting......
My question is, since this technology has been around for 20 years, why doesn't the telecom industry use these types of batteries for their -48v suppy?
I've seen new installations of lead/acid wet cell batteries at interconnect sites. These batteries are under a constant state of charge.

Amen! Particularly the part about 75 meters.

I had an illegal a few houses up the street in my St. Louis days and met him when my TV went nuts from his sweep-tube amp. He subsequently bought a Sillytronics which cured the TVI at least. One day I wandered up during a good E skip and knocked off a raft of South Americans and Carribean stations on 10 and offered to help him get legal. We set an evening for it and nine people showed up in my basement shack and we got four General tickets (at 13wpm CW remember) out of that batch. And so it began.

That is one reason I get a case of the tights from Codeless Techs out patrolling the world.

Most have not a clue plus cost makes them change there mind . 350 bucks for 1 battery turns them around . Most phone switch rooms are built by contractors who have not a clue . Infact most Electrical Engineers I have ever known are clueless.
Competance is what it is all about. When you have a situation full of incompetant people they just go with the flow and ask a friend or a worker what he should do.
Telcos etc are grade 1 service for Electrical companys. They get service way before you do hehe. They never expect to be out of power if at all and there massive pile of wet type batteries would prob be useless anyway HEH. Sitting there trickle charging does not really help wet types that much. The continous corrosion does not stop.
Wet type last on average 24 36 max months. AGM type batteries will last well over 10 years. You can expect more than that if you use them for say backup power to an inverter etc . They are zero maintance. NO fumes etc hehe. Anyway guess that answers it .

The NSA monitors foreign goverment communications all over the world. We as a country on the norm do not monitor our communications among lamen type users. Infact the FCC cannot request any such thing , nor would the NSA get involved with a dispute that was not associated with a foriegn government. Far as the FCC they are just a regulatory department . I am quite happy about the free opening up of the 54 ghz - 60 ghz . Seen 1gbps over 55ghz point to point . basically 1 gigabit of bandwith over radio HEH . Would be a kick ass lan HEH . OK back to what I was saying ..All telecommunication exchanges in the United states do have " sniffers" , as of 1993 or somewhere there abouts. That would not be new news. Cellphone conversations are not listened too by some USMC radio tech all day . MOst of the communications is done by the USMC for the NSA far as implementation setting up.
Reason I know is I have a freind who was in the USMC for 8 years and worked at the nsa though military. ANother thing you should consider is that the NSA has more than 70% of its staff is Mathmaticians . The estimated ability of the NSA in advancements in math is about 10 years ahead of the overall known theroms. Reason is encription. It is all about the crypto HEH. Intelligence gathered everyday is sent to the respects departments be it navy, army,air force,cia etc. The President gets a full account of everything that has happened in the last 24 hours everyday at 9:00 am or somewhere around there . I am sure he can sleep in if he likes . Rest assured . You are not a threat to national security. Our daily lives mean very little if nothing at all to a governement agency of that type. Everyone is not out to get you, atleast not all the government agencies are . HEH. Becoming a an eye sore for the FCC does not help you. If most people would not brag " hey I can do whatever on a bird " Then you might have fewer problems . Some people are out to ge you for there own personal propaganda . Thing is not to give a dam about them . Even if you did get interagated would not matter . You can only be held for a few days anyway. If you are not charged you go home and they pout and cry hehe. /me smirks .. though the FBI is just persistant about things that never happen. Some seem to be very odd. Anyway if you have not been raided or been told to sit down and shut up .. while you look at armed men who look like they prob have not gotten laid in a while not to mention there foaming at the mouth then you will be ok . HEH

Your asprin . Painkiller

Source record: 87422

You would have to more than Double the output of the radio to see any difference, & those little FRS radios aren't designed with any "Reserve power" to be peaked up. The poster that said you would need more than 5 watts is incorrect, however. I have both the "regular" 1/2 W Cobra MicroTalk FRS radios, which I have tested against a pair of Cobras New "MicroTalk Professional" which are 2W GMRS radios that operate on the 1st 7 FRS channels. I get about a little less than 3/4 of a mile Traveling a route in my area on the FRS units, but I was able to continue down the same semi-straight road to almost 2 miles with the microtalk pro. I also tried a pair of Radioshack FRS on the same route & got about 1/2 mile, & a pair of midland FRS radios, which were similar in range to the Cobra FRS. All of these radios have similar sized antennas & were used with fresh Alkaline batteries. The range is consistant & shows that a 2W radio will give a big difference over a 1/2W unit, & the difference would be greater if the situation were line-of sight, As the 2W radios are rated "5 miles" vs "2 miles" on the FRS....

Every time you double your power, the guy receiving your signal will see
a 1dB gain. It gets rather expensive, considering 3dB = 1 S unit..

Going from 1/2 watt to 2 watts, you're going to see a 2dB increase (1dB
for 1/2 to 1, and 1 again for 1 to 2)

So, in actuality, that makes perfect sense.

From: sparky@cet.com (Frank Gilliland)
In the past two days you have accused me of:
- being N7;

"No, I have not. This is your first lie today, which effectively nullifies anything else you have to say, but since you are so easy to expose as a fool, let us proceed."

- being BigBen;

"Which directly contradicts your claim you have never posted as ANYONE other than yourself and never used another addy or server.Need to see it again?"

- saying that I am from Issaquah;

"Yes I did, I repeated what you said."

- saying that I am from Clark County;

"Again, no I didn't. I have no clue what county you are in. That's two."

- deleting posts from all the usenet archives on the internet; and,

"Again, no. Your use of the word "all" and your pathetic attempts at attributing your fantasies to me lend nothing to your claims. That's three. Allow me to take this opportunity to educate you once again. Al it takes is an email to usenet with some I.D. information and your post is removed. You're welcome."

- forging posts that you wrote.

"Having trouble remembering your lies, Spark? Uh, YOU were the one that posted a forge and like your other stooge, attempted to attribute it to me even though your time stamp is all over it. No one else on the ng attributes your forges to me except you and your two stooges."

You have failed to prove any of your accusations.

"Like the other two stooges, I never have to. You prove me correct quite nicely, and on a regular basis. Your inability to post without name calling is validity indeed you have been stripped of all merit. You have been reduced, as Dogie has, to ng fodder, an oddity to be toyed with, at our leisure whenever we see fit, nothing more. The rains have finally stopped, the sky is clearing, the skip is running. Time to get busy. Catch you on the air, and as always, have a great weekend."

_____.

Assumption #1: It is not my job to enforce the law.
Response: It is my legal right, moral responsibility, and independant choice to enforce any law I see fit to enforce. But I am not enforcing -- or breaking -- any law by posting in this newsgroup.
Assumption #2: I get upset about the law being broken.
Response: I do not get upset about any CB law being broken. On the contrary, the more RF pirates that break the law the better.
Assumption #3: The breaking of the law does not directly harm me, a friend, or a loved one.
Response: RF pirates affect me directly in my work.

.....Frank Gilliland (Sparky@cet.com)

Not quite. The unit of sound, the Bell after guess who, was set up like the Richter scale on as logrithmic scale because the human ear responds that way. The Bell was a bit too large to do much with so the deci-bel (1/10th of a Bell) became the unit. The concept of log scales has been used for things beyond sound and is used for any number of things depending on where you set your reference. On phone lines zero level was defined as 1 milliwatt across 600 ohms so you could measure in dbm. You hear about dbi (isotropic dipole whatever in hell that is) in antenna things.

So if 10 Dead Birds is a factor of 10, then a doubling will be the square root of ten or a tad over 3db. 3 doubles, 6 quadruples, nine octuples and 10 db is a factor of 10.

Traditionally, an S unit is 6db but 5 is more to the point. Actually all that is happening is that AGC voltage is being measured on a cheap moving-vane meter which is by nature logrithmic.

So going from 0.5 watts to two should be about 6 dead birds or about one S unit. It should about double range. That is a square-law relationship.

Dick N BK, vice-president and trainee; International Veeblefetzer Corp.

You are doing it correctly, take the code test first. At the risk of giving unsolicited advice, download Morse Academy from http://ah0a and follow both the directions and the lesson plan. Use my email if you wish.

For reasons I will not go into here, I regard the codeless Tech as a fraud on its victims.

You can get 5-10 miles witha FRS radio if you really want to. A group of us here did just that. We could hold clear chats with each other. What we did was place a FRS radio and a Radio Shack simplx repeater together at one of the guys condo apt. But he did live on the 14th floor. With this setup one guy went about 5 miles out from the condo and another guy went about 5 miles out in the other way, they was able to still talk with each other, but that was only going thru the simplx repeater. So if you have a high place to place one you can get more range.

This should work:
You can put the little radio in a sealed plastic box up on your roof up as
high as you can.
Then run the power, speaker/mike lines down.
It all about height with those things
Since you can not use any useable length of coax with 500mw at 468Mhz

Hello Joe: That sounds like a great antenna installation, all right.

I had the A99, ABS1600, Sigma 4, I-Max 2000, MaCo V5/8, CLR-II, and a bunch of other antennas, I have them stored in my barn out back.

The two best antennas where the Sigma 2, 5/8 wavelength, made by Avanti, or the famous Penetrator 500, made by Hy-Gain.

I am not really certain why they stopped making them, but I can only guess at it. I think because the skip started to die out in the late 70's to early 80's, which is when the Penetrator 500 was stopped being made by Telex that bought out Hy-Gain, around 1979, plus or minus a year or so.

Also the quality of the Telex version, called the "Golden Penetrator 500" was not as good as the Hy-Gain model. Telex also offered the antenna in a gold looking anodization finish, that went away after only a few years. This was the "Golden Penetrator 500" The difference between the Hy-Gain and Telex models is real easy to see. The Ground Plane Radials are held in with 2 each 1/4" bolts, on the Hy-Gain Models, and the Telex model only uses one 1/4" bolt. Also the Telex used a smaller "Clam Shell" type base assembly as compared to the Hy-Gain models. Not a big deal, but it was obvious that Telex was cutting corners.

The material for the Penetrator 500 can be judged by the length of the internal reinforcement sleeve placed inside the base of the 1 1/4" diameter aluminum tubing bottom piece. If the internal sleeve is 17 inches long than the material is pretty strong. But some models have used a internal length of 1 1/8" diameter tubing inside the 1 1/4" tubing all most the full length as a internal support. Probably due to the material not being the best around.

Because the aluminum tubing wall thickness tolerance would vary a bunch, Hy-Gain would reduce swage its ends so that the next smallest diameter would fit every time, which is what is needed for a production run type of thing.]

Its possible that the material and production costs over ran the lacking demand.

Today's stronger round aluminum tubing made from 6061 T-6, or 6063 T-8 is made much better, with tighter wall thickness tolerances. But its expensive!

Jay in the Mojave

Sideband, 2x the power results in a 3db increase, and 6 db is equal to 1
s-unit on the receiving end. So 4x the power for a 1 s-unit increase.

We shouldn't be too hard on the old boys on 75. If you spend some time
scanning across the advanced portion of the band (3.775 to 3.850 MHz) you
will find some technical discussions that will blow anything out of the
water I've ever heard on the CB.
That's also where I heard the story about the ham who was 30dB over S9
everywhere you went. Another ham who went to visit the guy came back on the
air and said, "I can't tell you what he's running over there. All I can say
is he's got hot running water in his shack".

Yes, I must have studied too hard for my 13wpm test. I managed to pass the
20. I had the most difficulty with the five word test.
When I was a codeless tech I didn't spend too much time on the CB.

THE BABY PHOTOGRAPHER

The Jones were unable to conceive children, and elected to use a surrogate father to start their family. On the day the proxy father was to arrive, Mr. Jones kissed his wife and said, "I'm off. The man should be here soon."

Half an hour later, just by chance, a door-to-door baby photographer rang the doorbell, hoping to make a sale.

"Good morning madam. I've come to..."

"Oh, no need to explain. I've been expecting you," Mrs. Jones cut in.

"Really?" the photographer asked. "Well, good! I've made a specialty of babies."

"That's what my husband and I had hoped. Please come in and have a seat."

After a moment she asked, blushing, "Well, where do we start?"

"Leave everything to me. I usually try two in the bathtub, one on the couch and perhaps a couple on the bed. Sometimes the living room floor is fun too; you can really spread out!"

"Bathtub, living room floor? No wonder it didn't work for Harry and me."

"Well, madam, none of us can guarantee a good one every time. But if we try several different positions and I shoot from six or seven angles, I'm sure you'll be pleased with the results."

"My, that's a lot of. . . " gasped Mrs. Jones.

"Madam, in my line of work, a man must take his time. I'd love to be in and out in five minutes, but you'd be disappointed with that, I'm sure."

"Don't I know it," Mrs. Jones said quietly.

The photographer opened his briefcase and pulled out a portfolio of his baby pictures. "This was done on the top of a bus in downtown London."

"Oh my God!!" Mrs. Jones exclaimed, tugging at her handkerchief.

"And these twins turned out exceptionally well when you consider their mother was so difficult to work with."

"She was difficult?" asked Mrs. Jones.

"Yes, I'm afraid so. I finally had to take her to Hyde Park to get the job done right. People were crowding around four and five deep, pushing to get a good look."

"Four and five deep?" asked Mrs. Jones, eyes widened in amazement.

"Yes", the photographer said. "And for more than three hours, too. The mother was constantly squealing and yelling - I could hardly concentrate. Then darkness approached and I began to rush my shots.
Finally, when the squirrels began nibbling on my equipment, I just packed it all in."

Mrs. Jones leaned forward. "You mean they actually chewed on your, um...equipment?"

"That's right. Well, madam, if you're ready, I'll set up my tripod so that we can get to work."

"Tripod?"

"Oh yes, I have to use a tripod to rest my Canon on. It's much too big for me to hold very long."

Madam? Madam?...Good Lord, she's fainted!"

Amazing what you can do with the code when you get your emotions and testicles out of it. Because of the 13wpm requirement I taught it at 6/16 Farnsworth, got to 16 real quick and had one guy walk in off the street after 29 days and come out with an Advanced. Not entirely convinced that you are all that unique having more trouble with five; in at least one case, I had no choice but to use 16 from the get go.

As far as 75 goes, the non-treaty portion (3.9 up) has been a cesspool since I can remember (and I was licensed in Nov 1955); the Extra portion when I got mine in the mid-70s was the Elephant's Graveyard where old hams went to die. A good friend, W�RL (Rotten Lid) used to opine that the two of us together were not old enough for 75.

One of the 17th District Engineers many years ago was reputed to observe the kw limit; the filaments only ran 850. My all time favorite was a guy out of the Mojave in the AM days who ran out of a padded cell because he had enough compression to transmit toilets flushing for six city blocks. When he hit the PTT it sounded like an explosion in a junkyard.

Dick, Bionic Klutz

IMHO, if CBers cared about their band and about their public image they would 'police' themselves. They would "discourage" the chaos, the black market businessmen, the psychopaths and the king of the hills. Instead they seem to do exactly the opposite.

>
> It seems to me that if someone is smart enough to perform this mod without

before
> I was licensed to stay well below 10 meters.

Many don't. And from the attitudes of some people on this newsgroup, many STILL don't. A lot of newbie CBers have no clue that 100 watt 25-32 Mhz 'cb radios' are not legal.

> The information I choose to pass along is for educational purposes only.

It's not. Anyone reading this NG can see the information is there to help people "get around" FCC laws.

>In
> fact, such experimentation led me to obtain my ham license. I watched a
> buddy of mine make a 10 meter CW contact on my "illegal" cb. I was studying
> to get my ticket the next day.

Great. But many CBers don't care. Or, they get their ticket and then go back to freebanding. Or they play 'CB' on the ham bands. Who needs "hams" like that?

> It also seems to me that most CBers would be shocked if they happened to
> tune across the 75 meter band.

You'd have to give them the specific frequency and specific day and specific time, or they'd never find what it is you're referring to. By the time they found IT, they'd have listened to dozens and dozens of normal conversations between normal people. This might shock them, yes indeed.

> Maybe we should clean out our own sandbox before we go play in another one.
>

The sandbox IS being cleaned, thankyou.

>Amen! Particularly the part about 75 meters.

Using 75 meters as an "excuse" for bad behavior on CB is lame and weak.

>I had an illegal a few houses up the street in my St. Louis days and met him

Dick, you and some others fear "offending" illegal CBers. That, I cannot fathom. You know, it IS possible to disapprove of illegal CB and not be seen as a prude and a jerk.

>That is one reason I get a case of the tights from Codeless Techs out
>patrolling the world.

Not patrolling, just expressing the concept of respect for the radio spectrum - which you have lost sight of.

(PS. I notice that any ham who expresses opinions that don't jibe with the majority gets hunted down and harassed and threatened here. If this is the case, then by all means go ahead, but you're going to have to work hard for it)

With the antics of a few No-coders on this NG, I can see why and I heartily agree. I know more than a few people that could join the ranks of the anointed tomorrow but don't, simply because they find the attitudes of these "No-coders", both here and on the legal 40, to be distasteful. High and mighty to say the least. It's folks like you and n7kn that bring people to the hobby, not these God's of No-code. :-)

Basically because I am not a prude or a jerk; you own that side of the street. My disapproval and a buck-and-a-half buys coffee at the local coffee platz. I much prefer the masculine approach rather than the female habit of having opinions on everything and insisting you are on her side or my side and generally venting in all directions at once. And I passed a code test.

Respect for the radio spectrum -- that's rich. Building a shrine? Three choruses of I Don't Care if it Snows or Freezes? Sounds pretty idolatrous to me.

That is riduculous... Government agents have better things to do than
sit at their PC and flame and taunt potential illegal CBers to gather
evidence. Are you a member of the Michigan Militia by any chance?...
hehehehee

My thanks be unto you. Try http://ah0a.org. Proving once more there is no big red S on my sweatshirt.

For some period, 5wpm Morse is going to be required for hf amateur privleges below 30 MHz. So selling a guy a bill of goods and a call-sign is essentially fraudulent. The Codeless Tech is admirable for your wife to get you to bring bread-and-milk and for all twelve real experimenters. It is not the entry-level Amateur exam.

So people who find they have bought a bridge tend not to be very happy about it. Some get downright grumpy. There is a beast we call the Lifer Tech who becomes the resident genius on virtually every subject known to man including the regs (odd because that is in Element 3 that they haven't taken yet). It becomes a mental and emotional issue and they will spend vast amounts of time and money to avoid taking what is actually a simple test for most people.

For us OTs they present an ethical problem: We are nice for a few months and then get out the prod for a year or so and then write them off. The code test is really what gains admission to the fraternity; do we enable or guide them to reality? Damfino

>incorrect, however. I have both the "regular" 1/2 W Cobra MicroTalk FRS
>radios, which I have tested against a pair of Cobras New "MicroTalk
>Professional" which are 2W GMRS radios that operate on the 1st 7 FRS
>channels.

Interesting. A group of us has not been able to reproduce any such improvement. Side by Side comparisons yielded one to three city block differences. This is with antennas similar to the FRS antennas. Obviously with GMRS, you have various antenna options.

And the antenna IS the key to performance. Using the Radio Shack mobile (with its on-the-roof antenna), distances of several miles have been achieved.

In short, tests over level and hilly paths, especially wooded, have not produced any benefit which was worth the higher price and license requirements of GMRS.

>the 2W
>radios are rated "5 miles" vs "2 miles" on the FRS....

Actually, the "world's record" for stock FRS radios is 123.5 miles, set earlier this year in North Carolina. Needless to say, height was a factor. The test was conducted between stations on four mountain peaks.

Source record: 87555

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1250436226

Cobra 2000 GTL in excellent shape. If you buy one CB ever, this is the one. This radio has LOTS of extra channels. Radio puts out 4+(!)watts on AM and 12+ watts on SSB. Face, cabinet, and knobs are all in excellent shape. It even comes with an Astatic Silver Eagle D-104 in mint condition all wired up for the Cobra and has fantastic crisp audio! It also comes with 2 Midland nice quality external speakers with switchable noise filters on them!! Everything on the radio works perfectly: The frequency counter is right on the money and does not drift. When you turn the radio off and turn it on later the frequency is EXACTLY where you left it. All the controls on it work perfectly, they are: Dynamike plus control, Volume control, Squelch control, RF gain control, SWR cal control, Tone control, Voice lock control: coarse and fine, Mode switch-(LSB/AM/USB), Speaker switch, ANL switch, NB switch, CB/PA switch. SWR/SWR cal/% Mod switch. It has the Frequency counter that displays 7 digits, a great clock with several timer functions. Unit also works on 13.8 VDC (switch on back) so you can use it in your car/truck. I will also inclde a copy of the users manual and service manual! This is truly a loaded radio and you can talk all over the place on it with the amount of channels and power this radio has. Buyer pays true shipping costs for professionally packed box and can pay with Pay Pal or money order. Buy with confidence from me as I have great feedback.

Dick:

I feel the opposite, but I don't like the current situation, either...

I think the entry level tech should be codeless.
General class should require 5 WPM, and have MUCH more limited voices
privileges on HF, digital modes fully open. For them. This might require
a rearrangement of the band plan to allocate space for the digital
modes.
Advanced class should be brought back at 10 WPM, and would have the same
priv's as the old General class "before the music died"
Extra class should require a 20 WPM code test, and would have all the
priv's that the Extra class had "before the music died"

This is coming from a "new" no-code Tech, mind you... For me, getting on
to VHF/UHF, then experiencing Field Day has caused me to redouble my
efforts towards mastering Morse.

So I think if someone wants to get into HAM radio, they should be given
a taste of what it can be like to have all the priv's, to give them the
desire to learn the code, and advance.

Just my two cents. Your mileage may vary.

I have to admit, I agree with that. Most of the CBers that I became
aquainted with would like to choke the living s*** out of that dude with the
"noise toys". But, if he's mobile no one will ever catch him.

Right again. One would think that if someone was interested in a hobby they
would take the time to read about it. Unfortunately, someone who has no
clue that running 100 watts "willy-nilly" across 25-32 MHz is unlawful
probably can't read.

>
> > The information I choose to pass along is for educational purposes only.

Yes, but it brings me so much amusement believing that 9 out of 10 guys who
attempt a mod like that one I described will end up with a smoldering pile
of junk. I'm sure you think that's funny too.
I'll avoid giving out any mods that will land a guy above 28 MHz. I could
add a disclaimer that if they are up there, there's a whole bunch of guys
that have nothing to do but hunt them down.

No, we really don't need that. Maybe we could give ops like that a license
restriction that would only allow them to operate between 3.9 and 4.0 MHz
from 3 and 11 AM GMT.

> > It also seems to me that most CBers would be shocked if they happened to

Hey, no "hunting", "harassing" or "threatening" from me. You present valid
points. We have a difference of opinion. That's why we call it a
"discussion group".
When I was doing it, I used common sense and I stayed well away from the ham
bands. I must agree that it's too much to expect for everyone else to do
the same.

I would suggest using (if you can find one) an old 27MHz walkie-talkie.
Just use it as an RF sniffer. Go around your car with the thing and you
should be able to figure out where the noise is comming from.
Pulling fuses one at a time is also a good way to figure it out, unless it's
something that uses a fusable link.
It might help too if you told the group what model of Dodge you have. Maybe
someone has had a similar problem.

I have no problem with things going Codeless -- life moves on. But they haven't yet and barring a treaty change that is not on the 2003 agenda at this point it is silly to pretend otherwise.

Funny you mentioned Field Day. It was FD that broke me out of an 18wpm hump and I passed the Extra the following Tuesday. When the birds and crickets, as you gas the generator at dawn, tell you that you are 59 in South Jersey you have probably had enough :-) Now it is all on laptops - enter the call, section, and class and let the compooter key the transmitter. Life moves on.

Field Day is probably the best advertisment we have for the hobby. Glad it did its job on you.

Actually, no -- never freebanded in me life. But only because there was no need to. I will admit to bootlegging on 11 meters when it was still a ham band -- only place where A4 was legal; some reg had to go. Which, if nothing else, illustrates a point: these were garbage freqs then and are garbage freqs now.

Oh thats ok I have taken a lot of management coarses, and I am trained
to take the ingitive on a lot of things. And isn't this a public forum
type ah thing, thats what you guys always say, right!

> I think Dick is much more qualified to speak for himself
> than you are,

I agree a hole bunch, Dick is more qualified to speak for himself. A
very admirable thing about Dick is that he is smart enought to have a
little fun here and thru all BS he is still helps, and is a great
posting asscet to the ng. He speaks his mind as a gentelman, (meaning I
read in experence, experences, and been there done that, sort of thing,
while using his head) and adds quit a bit to the ng.

I am not trying to speak for Dick. But I am just trying to offer some
free advice, (I usually get 2 bucks for autographs at the swat meets,
ect.) again being sent to a few management training coarses, that where
at least 2 hours long. I was just trying to offer some sound advice.

> so shut up and let him.

This isn't real friendly and on the Lords day also. Shame.

By me throwing in my 2 cents worth here on the ng, will not restrict Dick from replieyin, or you rerding his reply. Being a publick forum and all, right?

Here's another free one for you:
When ever ya get all wrapped up around the axel like you have on all the Illeagle CB or Ham Stuff, take a walk and enjoy the senery. Back when I lived in the city, I use to talk a walk and look over all the pretty waitress's at the local greasy spoon. Sometimes even put a fire underneth the jut box, and have a few beers.

Jay in the Great Mojave Desert, ... just down the road ah ways from the fillin station.

>

For some reason, it does not double the range on FRS. I can't explain why. I can only tell you what I've observed.

I've been involved in six range tests under various conditions. We got the same results each time.

The higher power "filled in the gaps" within the normal coverage area; i.e., fewer "dead" spots and less "picket fencing". But the overall distance did not increase significantly.

1/2 watt times 2 is 1 watt and 1 watt times 2 is two watts so going from 1/2 to 2 watts is doubling it twice and amounts to 6 db which in a perfect world would be 1 s unit but in cb's is more likely to be 2 s units

Yep more equipment for the 10 metre pirates. This same company is selling this gear all over Asia. It has wiped out the 10 and 12 metre bands in Asia, Pacific, VK and ZL.

The competitor to this company is bringing out a version that goes all the way to 20 metres. In VK , ZL and the Pacific, during the night the 20 metre band is full of pirates singing and carrying on like on CB. There is nothing that can be done because there is no law and simply put there governments dont care.

HAMS SHOULD NOT SUPPORT THESE COMPANIES. ALL THEY PROMOTING IS TOTAL ANARCHY ON THE HAM BANDS.

Yes we know there are many CBers using Icoms and Yaesus etc, but these radios are priced to sell. Thats why there is Taxi companies from the Philiphines on the low end of 10 metres.

Hello Guys,
My family and I are leaving on vacation tomorow and I figure the guys will go one way and the gals will go another . I was wondering if all the frs radios are practically the same or does other ones work better than others ? Anyone have any personal experience with any particular model ? I am looking to spend under $100 for a pair.
What is your preference ?
Thanks,
Speedy

In defense of Ranger's RCI line of radio Name me a better radio for SSB on 10 or 12 Meters? It will talk Circles around a Kenwood or Yaseu on SSB and on AM. FM I dunno about.
THe DX models with Surface Mount Technology are a solid performer not just good for CB !

You mean it will cause more interference than a Kenwood or Yaesu.

Get real. There is NO comparison between a over priced CB radio (RCI)
and a ham rig.

Others have suggested the fuel pump, however if the noise is continuous when you turn on the key without starting the car, then it is not the fuel pump that is affecting the unit at that point in time.. I own an '86 Dodge Lancer (actually 2 of them), and the fuel pump only runs for about 2 seconds to pressurize the line and then stops, when the key initially turned on. If the noise lasts longer than these two seconds, it is coming from somewhere else at that time. Make sure the blower motor for the heat/AC system is completely off, and see if that helps things out...

If it does, you should be able to buy a noise filter for the blower motor through Chrysler. I know that the '87 model of my car had a filter inline with the blower motor, (Yes, I owned one of those too), however, neither of my '86's did. If that happens to be the problem, I'll see if I can dig up the filter, and get the part number for you... (The '87 has been stripped and scrapped, and I haven't gotten around to putting the filter in my '86 yet...)

Not too surprising. I have noted similar things with 12 meters. And you are right, why fight it when you can move.

The fact remains that the lo-VHF region is not now and never was popular among those who have to get something accomplished. Even the Army used it for FM tank radios.

Hey Jay!!!
Just wondering about your opinion of the old Stardusters.
Do you think you might be adding something like them to your production schemes?
They look like they maybe very expensive to build.
I know that they were very popular back when I got started but, never had the pleasure to own one.
Just wondering...

Hello Squeezehack: I have rebuilt a few parts for the old Star Duster Antennas, I machined a new insulator for the antenna, and didn't re-do all the hole thing. Its like putting Ear Rings on a pig, ya still got a pig.

The Star Duster Antenna, is not the best choice in the world in my opinion. I used a Star Duster, back in the 1970's, and for the first time had neighbours knocking at my door with TVI complaints. Just as the radio checks where being made. So the antenna only lasted a short time on the roof.

I know I'll take some heat here for bad mouthing the Star Duster Antenna, but such is life. A lot of guys like it because it can take a lot of power. Well so what! No reason having a lot of power, if your gonna have neighbor problems, and not get out like you should from a 5/8 wavelength ground plane or beam antenna. Its like having a Mussel Car, and using cheap shit gas, it will work, but not very well.

The Star Duster Antennas, look a likes, are pure high performance junk! Somebody spent a lot of time and money to get the cheapest shit materials available to the free world. I bought one for around 40 dollars new to see how it is assembled, and how it works. After assembling it, all the mechanically connections where lose, and cheap shit. The base connection from the S0-239 to the vertical element was lose and moved after tightening it all up. The neighbor kid wanted it, but I thru it out, and gave the kid a old modified CLR-II that was lying around.

The Star Duster can be redesigned to lower the loss's, and made to have a little more bandwidth, besides looking bitchen! I would use a elevated vertical base assembly, a much larger diameter aluminum tubing, and a Top-Hat and maybe some inductive loading, but that would take a while to get all figured out. Buy why use a Star Duster when the 5/8 wavelength antennas are better?

Jay in the Great Mojave Desert ..... 112 Degree's F today!

I just recently rebuilt a old Hy-Gain Big Gunn II, 4 element quad antenna for a guy, who had to back out of the deal to pay for his kids medical bills. But I found a buyer, in Los Angles.

<< . Some legitimate users will find this radio attractive, as well as some not-so-legit as well. Que Sera!
73 de Bert >>

I am very disturbed by the trend of ham psychotics, freebooters, scalawags, and other illegal operators, who seem to think "CB/HAM" is the same thing and have decided that they'll just "move in" on everything above 14 Mhz, sans license.

You've got people like Dick McCollum who encourage this sort of thing by calling them "garbage frequencies" and urging people to "loosen up" on the issue of RF piracy.

You've got people like Bert, who, because they once dabbled themselves, now turn a totally blind eye to the spread of illegal high power and piracy, thus giving the approving nod to both. "Que Sera" he says, i.e. "what will be, will be". Incredible.

You've got people like Tim Nebo who never want to get a ham license, and just plain get a kick out of breaking the law and flaunting it in people's faces.

And then you've got all manner of apologists and excusers for misbehavior and criminality. Thank God for the few who have the backbone to speak against it.

I have read opinions that complaining in a CB newsgroup does no practical good. Maybe they are right. I can see right away that there is a lot of effort made to squelch these complaints and otherwise keep a lid on them.

I also think that RCI and some of the other manufacturers are at fault, and maybe they are a better target for complaints. I am going to write to ham organizations and my congressmen to see what can be done about stopping the spread of these inexpensive "fake" ham radios that are turning everything above 14 mHz into CB.

However, that doesn't mean their sellers, supporters and users are "innocent victims" either.

My mistake, Richard.
You'll just have to take my word for it. =)
But, it's not nearly as fun as your first few CW contacts and the joy of receiving QSL cards from those contacts.

11 (26.960 to 27.230) was the only HF band that permitted A4 operation. A4 was permitted on all bands above 50 MHz, unless you were a novice (according to the 1957 ARRL Radio Amateur's Handbook). It looks like you could pretty much do whatever you wanted on 11 except TV.

Speedy,

If you are looking for cheap, try Midland. They don't have the "sub-channels" to get more useable channels, but they will work. I also like the Cobra FRS as they do have subchannels and are around $80 for a pair. The downside to the Cobras are the weak belt clip holster.

Just a comment about the cb stuff as compaired to the Yaesu, Kenwwod or Icom stuff., Show me a Yaesu, Kenwood or Icom that will transmit for 24 hours a day seven days a week running as a beacon station. The last one I used failed in less than 1 month and that was using only 10 watts output. I have since moded a Cobra 148gtl for 10 meters, and it has been running for well over 1 year on the same antenna that the Yaesu was on. I've had less problems with my rci-2950 in the truck for 10 meters than I had with a Kenwood. So the other poster is right, some of the ham rigs don't hold up has comparied to some of this so-called cb stuff does. If the big three don't start making better stuff the RCI type stuff will become more used due to less down time.

3434. More rules for the (insane)AntiKeyclown posse

Newsgroup: rec.radio.cb
Date: 2001-07-01 20:28:35 UTC
From: n7kn <n7kn@hotmail.com>
Message-ID: <TJL%6.2402$b3.773660@feed.centurytel.net>
Source record: 87473

Sec. 95.413 (CB Rule 13) What communications are prohibited?

(5) To advertise or solicit the sale of any goods or services
(9) To communicate with, or attempt to communicate with, any CB station more than 250 kilometers (155.3 miles) away; ***Don't do this, folks. It's just wrong!***
(11) To communicate with stations in other countries, except General Radio Service stations in Canada.

Sec. 95.416 (CB Rule 16) Do I have to limit the length of my communications?

(a) You must limit your CB communications to the minimum practical time.
(b) If you are communicating with another CB station or stations, you, and the stations communicating with you, must limit each of your conversations to no more than five continuous minutes.
(c) At the end of your conversation, you, and the stations communicating with you, must not transmit again for at least one minute.

Sec. 95.412 (CB Rule 12) What communications may be transmitted?

(b) You may use your CB station to transmit a tone signal only when the signal is used to make contact or to continue communications. (Examples of circuits using these signals are tone operated squelch and selective calling circuits.) If the signal is an audible tone, it must last no longer than 15 seconds at one time. If the signal is a subaudible tone, it may be transmitted continuously only as long as you are talking. ***Cool, noise toys are ok.***

Sec. 95.415 (CB Rule 15) Who is responsible for communications I make?

You are responsible for all communications which are made by you from a CB station.
This is an outdated rule. The law firms have shown us that we are no longer responsible for anything we do.
If you are a rude, inconsiderate jerk who has no regard for the rules, sue your parents.

Sec. 95.406 (CB Rule 6) Are there any special restrictions on the location
of my CB station?

(b) If your C/B station will be constructed on an environmentally
sensitive site, or will be operated in such a manner as to raise
environmental problems, under Sec. 1.1307 of this chapter, you must
provide an environmental assessment, as set forth in Sec. 1.1311 of this
chapter, and undergo the environmental review, Sec. 1.1312 of this
chapter, before commencement of construction.
***This is the big one, guys. I think you can shut down the lot of us over
this one. We all know how sennnnnnnsitive the enviiiiiiiornment is.***

I have given your advice all the consideration is is due.

Now I will offer you some advice: When a question is asked of someone
else (that means it has someone else's name on it), don't assume that
the question is for you.

BTW, did you ever figure out whether you have a Viking or a Valiant?

I was pointing out that your complaining about no-codes -- a ham
complaining about other hams in a CB newsgroup -- isn't any better
than the anti-illegal posts you enjoy complaining about.

Now I must catch a plane...

Hi, like many of my friends on here used to be a cb'er and have passed by the way side many years ago, well now i'm back and want to start up a new cb group if your interested in joining then let me know. this might be the first online group as well as on air group i know of.

I am firstly from the s.west of the uk and am currently in the process of getting my cb kit up and running again after all this time.

I have already had some good success trying it out but need to do some more repairs by new kit etc..

10-10 for now see you soon

3440. You Are Psychotic Bootleger Scalawag if you like Ranger equipment. (Was: Check out New Radio: RCI-2985DX)

I Think It Is Disturbing That Some Folks Believe That The FCC And The US Government Has The Right To Tell The Whole World How To Use The Entire RF Spectrum!

I Think Encouraging Everyone To Have An Open Mind and Not Look At Everything Through A Limited Viewpoint Is A Very Healthy Thing. Thinking for Yourself and Questioning Existing Laws Is Good. This is What Separates US from The Rest Of The Non-Free World.

I am happy to be called a psychotic, bootlegger, scalawag or anything like that. Just don't put me into the classification of old ham operators that rot away on 75 or 20 meters bitchin' about all the newcomers and CBers. They aren't doing anything for anybody, just occupying space!

Yes I have a ham license. Since 1978
(KA4CMT, No I Won't Change it for a New Vanity callsign, I don't need to stick my nose up in the air and I don't think Hams are better than CBers or vice versa).,
Yes I have a General Radiotelephone license.
Yes I do have an Associates Degree In Electronics
Yes I do work in the Engineering Dept. of a Very Prominent Technology Company (Corning)

WHO GIVES A CRAP, IT AIN'T GONNA IMPRESS ANYONE!
WE ARE ALL JUST RADIO OPERATORS, LETS STOP THE RADIO BIGOTRY!

When the frequencies are all sold to the highest bidder, no one will give a crap about CB or Ham radio!
We may all be in the same pathetic pile someday remembering when communications was something a private citizen could doing amongst themselves without paying some corporation for the privilege of doing so.
It's Best to lighten up and ENJOY the hobbies while you still can. Darn, all I did was post a link
Some of you folks are just a bunch of Soreheads!

p.s. what the heck is a "fake" ham radio. An MFJ product? Alinco?
Ten-Tec? Anything that doesn't say Kenwood or Icom?
How About Anything You Might Homebrew?

Hey Radio Police, He's running a radio that used to be on the CB band. Even Worse, It says GALAXYon it. Heaven forbid! Quick! Arrest Him! HA!

I don't see Dick as encouraging this sort of behavior at all. I think you're
taking the term "garbage frequencies" somewhat out of context.

>You've got people like Bert, who, because they once dabbled themselves, now
>turn a totally blind eye to the spread of illegal high power and piracy, thus
>giving the approving nod to both. "Que Sera" he says, i.e. "what will be,

>be". Incredible.
>

Uh oh, I'm in the crosshairs now, eh? I don't turn a totally blind I to
anything. I acknowledge it's existence, work with the situation "at hand," and
"get past it!" Hence, "que sera." I've NEVER given any "nod of approval" to
illegal high power so I don't know where you inferred that from. As for thr
piracy, (read "freebanding") how many pirates have you personally turned into
ex-pirates with that attitude. Before you go off on rant about other people's
positions, you might want to consider the "success rate" of the parties
accused. Are YOU part of the problem or part of the solution.

>I also think that RCI and some of the other manufacturers are at fault, and
>maybe they are a better target for complaints.

Good luck. I'm sure you'll have more success than the FCC. I noticed that RCI
is now advertising in QST, The official publication of an organization with
MANY who feel exactly as you do. I wonder how they (RCI) can afford a full page
color spread in QST, CQ Amateur Radio, and Popular Communications?!...must be
the lack of demand and dwindling profits that RCI's suffering with. I guess $
talks and B$ walks.

>I am going to write to ham
>organizations and my congressmen to see what can be done about stopping the

Having given you a lot of crap when you are wrong, I should probably make an equal effort when you get something right.

The problem is that both the Amateur and CB markets are way down so virtually all of the gear is designed for both markets plus whatever else can be wrung out of them. It is the nature of virtually every manufacturing process today to have high development and set-up costs with extremely low unit costs. The first one costs you $25 million or so and they are $17.86 after that. So the way to profit and pay is to unload tons of them. Truck stops, CB shops, Amateur retailers who need to make a buck, Walmart, the TV sales channel, and Damark for the returns.
If a rig has Ancient Modulation on it, it sure as hell is not designed for the ham bands only.

If this thing is going to be solved, the initial blast has to come from Customs, not the FCC. Both take their orders from Billy Tauzin, Republican from Louisiana who will take a campaign contribution from anyone if he can't extort it first. You would probably do more good writing him than rec.radio.cb and most certainly your elected reps; they did after all do something for local law enforcement.

When half or more of the ten-meter intruders have no concept of frequency as an idea let alone that they may be allocated to someone all the newsgroup Yentas in the world are not going to make a dent. Piss up ropes all you like but stay out of my face.

While I do not recall telling anyone to loosen up, I do indeed take a position of 'relative damage' being far more interested in the effects than some abstract principle like 'respect for the spectrum' (whatever in hell that might mean) keeping in mind the Law of Unintended Consequences. Say someone here regularly works DX at 27.8 SSB. Do I condone it? No. But in the broad scheme of things including the spectrum this is an improvement over running 5kw on Channel 6 Ancient Mary. First, because everything up to 27.995 was supposed to go to CB anyway but was cut off at 405 to prevent a non-existent problem with receiver local oscillator interference.
Incidentally, this is also the cover story for why there is no channel 1 on your TV. CB was, it would seem, a project for summer interns at the FCC because they committed several technical and administrative atrocities

including call signs that did not fit the treaty allocations. Secondly, SSB is effective at lower power levels and is far easier to amplify without buckshot should our freebooter choose to. If he is running a converted ham rig, the classic brown wire caper in the Yahoo 101 series for example, he can do this at no particular risk to much of anything anyone cares about so long as he stays below 28 MHz. The same cannot be said for 5kw of Antique Modulation.

I am particularly leery of the effects of illegality. In my part of the planet, people are stealing anhydrous ammonia from farmers' tanks to cook meth. There are several processes for making meth, this one is the one used by the German companies to turn der Fuehrer into a zombie and Elvis Presley for that matter under legal prescription. I do not condone drug use either but it would appear that dis-illegalized pot would be one hell of an improvement. We have shot coyotes since the 20s and have not done much more than cause the breed to improve mightily. After Prohibition ended we still had the dead, dying, and maimed from bathtub gin and spent years learning to make decent hooch and drink it in a civilized manner.

So I would much prefer to see the man run his Collins or Johnson kilowatt on 28.8 SSB than run some piece of crap whether Davemade or Fiddlyfool. Amps appeared about 27 minutes after CB was introduced simply because 5 watts (in those days) simply did not cut the mustard. Here again, the video i.f. current at the time was 26.75 (it is now 45.75) so TVI was a bitch. The limit should have been raised to 25 years ago.

History lesson time: In give-or-take 1955 the FCC had at least two major problems. They had seriously underestimated the range of VHF television and were operating under a license freeze that did not make Congress any too happy. There was also the minor matter of a real shortage of business frequencies. The state of the VHF business band art at the time was the Motorola Coffin Box so called because it filled your trunk like a coffin. FM deviation was 15 kHz which required 50 or 60 kHz channel spacing and community repeaters were a dream. In the period UHF television was born (they again underestimating its range) which required moving most of non-Chicago Illinois and Indiana for example to UHF bodily. Deviation was reduced to 5 kHz and spacing was reduced to 20-25 kHz making a lot of wideband junk available to start 2 meter repeater operations. In addition, CB was started as a shared business band to relieve some of the pressure at which it pretty much succeeded. While I have my problems with Fat Cousin Charlie they must be the only organization actually promoting communication rather than restricting it.

So CB was something of an afterthought, handled by summer interns it would seem. The transistor, double nickels, and CW McCall (an Omahan by the way) sent the whole thing into the heap. The first 23 channels were built out of the 26.95-27.23 ham band plus 27.255, a free-for-all freq that has garbage on Channel 23 to this day. Diathermy machines ran on an ISM freq just below CB and blotted out communication for miles.

When I call them garbage freqs I mean just that; no one really gives a good hoot with very few exceptions.

You seem to take the position of the pubescent female that I have to be 'fer yah or agin yah'. In the grand scheme of things I have better things to do than either one.

Dick N&#65533;BK

Back in days of old there was a vertical that had what amounted to a 'hoop skirt' around the mast and a short vertical element topped with a fair-size horizontal plus-sign. Seems it was in fact something of a modified discone and operated equally well over 4 or 5 octaves, radiating TV and aircraft freqs as well as it radiated the fundamental. The only one I ever saw ran 6 meters on Field Day admirably.

What in hell was it? Ring any bells???

Dick

Yo power house!

Dude! theres a real good handle ya sure...

I can read just fine, and what I read was
a spam ad for a CB radio posted to the
rec.radio.amatuer groups.

Keep your CB crap to the CB groups and
all will be OK.

BTW, I went to the ranger website for
my info, and all I saw was a bunch
of overpriced CB crap designed for
fools...

CUL..

BTW... PLONK!

From: piolrett@aol.com (Piolrett)
<< . Some legitimate users will find this radio attractive, as well as some not-so-legit as well. Que Sera!
73 de Bert >>

I am very disturbed by the trend of ham psychotics

"Right off the bat you call a ham "psychotic" for entertaining a different view than that of which you hold. The name calling is familiar, but I will indulge you and give the benefit of the doubt for a second. If you are "very disturbed" by another's view pal, you got a serious problem."

, freebooters, scalawags, and other illegal operators, who seem to think "CB/HAM" is the same thing

"Care to cite an example from what you have seen in here? Just one? Oh, that was YOUR take on it. Ok, glad we established that. Don't be shy, you can speak your mind."

and have decided that they'll just "move in" on everything above 14 Mhz,

"How about this one? Just one example from someone in here who was responsible for you arriving at that idea. Oh, I see, you make up statements like that to give you a temporary illusion of righteousness. Interesting."

sans license.
You've got people like Dick McCollum

"You sure have a hardon for Dick. Just exactly how long have you been sandbagging among us that you feel anointed as head pup? Nevermind. We know you can't sandbag."

who encourage this sort of thing by calling them "garbage frequencies" and urging people to "loosen up" on the issue of RF piracy.
You've got people like Bert, who, because they once dabbled themselves, now turn a totally blind eye to the spread of illegal high power and piracy, thus giving the approving nod to both. "Que Sera" he says, i.e. "what will be, will be". Incredible.
You've got people like Tim Nebo who never want to get a ham license, and just plain get a kick out of breaking the law and flaunting it in people's faces.

"This kind of thing just doesn't happen either. But what DOES happen is pilgrims like you seek out people like me and ask us what you already know our answer is gonna be then cry 'cause we don't kiss your ass and

change our views to suit you. On occasion, we even make fun of you, like now for trying to be something you ain't."

And then you've got all manner of apologists and excusers for misbehavior and criminality. Thank God for the few who have the backbone to speak against it.

"That is correct. Thank God for the people who don't back down from your tactics, no matter how many names you use."

I have read opinions that complaining in a CB newsgroup does no practical good. Maybe they are right. I can see right away that there is a lot of effort made to squelch these complaints and otherwise keep a lid on them.

"Really? Where? We love a good debate about the rules. You showed what you were seeking by the name calling. When one calls names, especially repeatedly, it is proof of their inability to debate the subject at hand. Do you not agree?"

I also think that RCI and some of the other manufacturers are at fault, and maybe they are a better target for complaints. I am going to write to ham organizations and my congressmen to see what can be done about stopping the spread of these inexpensive "fake" ham radios that are turning everything above 14 mHz into CB.

"You go girl. Did you think about what name you will use?"

However, that doesn't mean their sellers, supporters and users are "innocent victims" either.

"Let's see. If I sold the radio, I don't think I would claim I was a "victim". If I was a supporter (?) I am pretty certain I would not be a victim. You must have a crime before one has a victim. By stating that a "supporter" can not in any way be an "innocent victim" is to suggest guilt. Suggesting guilt for a mere supporter is exactly what you and your cohorts have been trying to do ever since you arrived. A skunk may masquerade as a peacock all the livelong day, but the stench is still there. Benefit of doubt withdrawn."

Assumption #1: It is not my job to enforce the law.
Response: It is my legal right, moral responsibility, and independant choice to enforce any law I see fit to enforce. But I am not enforcing -- or breaking -- any law by posting in this newsgroup.
Assumption #2: I get upset about the law being broken.
Response: I do not get upset about any CB law being broken. On the contrary, the more RF pirates that break the law the better.
Assumption #3: The breaking of the law does not directly harm me, a friend, or a loved one.
Response: RF pirates affect me directly in my work.

.....Frank Gilliland (Sparky@cet.com)

>I just wanted your
>guys opinions. BTW is there anyway to ad a helper to these little rigs ? :-)

Wilkinson's web site has the best info. See the thread about Cobra FRS for the URL. Or, repeat your request for info in alt.radio.family.

No way to add a "helper". It would not do much good, anyway. If you need more range mobile-to-mobile, check out the Radio Shack mobile FRS. It adds several miles to the normal .75/mile coverage. But it won't work as a portable unit. Too bulky to carry and needs an external source of DC.

Other than the R/S Mobile, just about every FRS has the same coverage, regardless of price. As you pay more, you get more bells and whistles.

You want one with CTCSS (or "privacy" tones), and one which covers all 14 channels.

I also ran a 10-meter CW beacon. I put the first RCI-2950 in service and ran it 24/7 for three years. I never needed the second one I purchased as a spare. The first one never failed.

Eventually, I moved to a new city and did not reinstall the beacon. I now use the radio on 10 meter SSB and FM. It still works fine. Now THAT'S quality!

(rest snipped)

While I share your concern over intruders in the Amateur bands, I can care less what kind of rig somebody uses elsewhere in the spectrum.

Somebody could use a 2970 for years on the regular 40 channels without being challenged.

But move into the ham bands or bleed over the neighbor's tv/phone and it's a different story.

Dave!!!!!!!!!!!!!!!!!!!!!

"n7kn" <n7kn@hotmail.com> wrote in message news:TJL%6.2402$b3.773660@feed.centurytel.net...
Sec. 95.413 (CB Rule 13) What communications are prohibited?

(5) To advertise or solicit the sale of any goods or services
(9) To communicate with, or attempt to communicate with, any CB station more than 250 kilometers (155.3 miles) away; ***Don't do this, folks. It's just wrong!***
(11) To communicate with stations in other countries, except General Radio Service stations in Canada.

Sec. 95.416 (CB Rule 16) Do I have to limit the length of my communications?

(a) You must limit your CB communications to the minimum practical time.
(b) If you are communicating with another CB station or stations, you, and the stations communicating with you, must limit each of your conversations to no more than five continuous minutes.
(c) At the end of your conversation, you, and the stations communicating with you, must not transmit again for at least one minute.

Sec. 95.412 (CB Rule 12) What communications may be transmitted?

(b) You may use your CB station to transmit a tone signal only when the signal is used to make contact or to continue communications. (Examples of circuits using these signals are tone operated squelch and selective calling circuits.) If the signal is an audible tone, it must last no longer than 15 seconds at one time. If the signal is a subaudible tone, it may be transmitted continuously only as long as you are talking. ***Cool, noise toys are ok.***

Sec. 95.415 (CB Rule 15) Who is responsible for communications I make?

You are responsible for all communications which are made by you from a CB station.
This is an outdated rule. The law firms have shown us that we are no longer responsible for anything we do.
***If you are a rude, inconsiderate jerk who has no regard

for the rules, sue your parents.***

Everyone can think that their stuff is better than someone else's stuff. After all, who want's to go through life thinking that they are second best. In truth, nobody has the best stuff because it is at best a subjective opinion. You can only base an opinion on what you know of your stuff and some other guy's stuff. Just because you think you have the best stuff doesn't make it so, because there will always be another fellow somewhere who also thinks that he has the best stuff,. and in this instance he might be right. In other words, everyone thinks that they have a sense of humour, even if they don't, and everyone thinks that they are intelligent, even if they aren't. That's enough stuff for today.

HAhaha, good to see ya back.. Or as you used, to say MUHAHAHAHAHA
Anyway, there are a few of us "old timers" you could call it,
left..Mabye, more than a few, but I only remember, a few...
We can rememer, the trolls from, back then, and they are, gone, and
really didn't bother us much...Now we have the "keyclown" genre...
Some of these guys are morons...
And, since I have grown up a bit now, if any of them have a problem
with it, i'll check the header, and do a tracert...Mabye then, a road
trip..."knock knock"
I'm sure these agitatiors will be gone soon, anyways, so whatever..
lets talk about antennas, radios modulation, and amps...Yes amps! Big
fucking AC tube amps..The kind that suck enough fucking juice, to
power a third world city...With enough RF for me to key up in front of
your house and light up your flourescent lights, and give you and you
children cancer...
Then I'm eat a fucking Big Mac, in one of the old fashioned styrofoam
containers and then whip it on the ground..Then wipe my mouth with the
American Flag. Why, cuz there aint a goddamn thing you can do about
it..

I'm an asshole, yes an ass hole

he's an asshole

Later guys
Ryan

Alright, just a simple question, then y'all can get back to your bickering.

Is a 6' whip enough of an improvement over a 5' whip to justify the extra wind noise and height when you stick it on the roof of your car?

Thanks.

Sabre

The PROfessor IS always real funny, and in this case he is RIGHT !
Corporate N8 should lead all the pinko Hambos by example by first jumping into the fire, so he will get the name "N8 of skip arc." You forgot the 4th OF JULY is comming, and the Truck drivers and city people & bumpkins will ALL SAY "You can have my CB when you pry it from my COLD bloody hands," or should I say Mic Key, Commie CLOWNS !
Dave!!!!!!!!!!!!!!!!!!!!!

I don't know about roof mounts - but doing something like that on a trunk mount, up to a point, is well worth it.
CB has a low frequency. It doesn't use repeaters. Therefore, on trunk mounts, it helps a lot if the whip substantially clears the roofline.

We are all spoiled now. We have all these mass produced radios to chose from
and few people appreciate the technology or take part in it. I am afraid it
is true that a lot of people nowadays are just "appliance operators"

From: piolrett@aol.com (Piolrett)
<< . Some legitimate users will find this radio attractive, as well as some not-so-legit as well. Que Sera!
73 de Bert >>

I am very disturbed by the trend of ham psychotics

"Right off the bat you call a ham "psychotic" for entertaining a different view than that of which you hold. The name calling is familiar, but I will indulge you and give the benefit of the doubt for a second. If you are "very disturbed" by another's view pal, you got a serious problem."

, freebooters, scalawags, and other illegal operators, who seem to think "CB/HAM" is the same thing

"Care to cite an example from what you have seen in here? Just one? Oh, that was YOUR take on it. Ok, glad we established that. Don't be shy, you can speak your mind."

and have decided that they'll just "move in" on everything above 14 Mhz,

"How about this one? Just one example from someone in here who was responsible for you arriving at that idea. Oh, I see, you make up statements like that to give you a temporary illusion of righteousness. Interesting."

sans license.
You've got people like Dick McCollum

"You sure have a hardon for Dick. Just exactly how long have you been sandbagging among us that you feel anointed as head pup? Nevermind. We know you can't sandbag."

who encourage this sort of thing by calling them "garbage frequencies" and urging people to "loosen up" on the issue of RF piracy.
You've got people like Bert, who, because they once dabbled themselves, now turn a totally blind eye to the spread of illegal high power and piracy, thus giving the approving nod to both. "Que Sera" he says, i.e.

"what will be, will be". Incredible.
You've got people like Tim Nebo who never want to get a ham license, and just plain get a kick out of breaking the law and flaunting it in people's faces.

"This kind of thing just doesn't happen either. But what DOES happen is pilgrims like you seek out people like me and ask us what you already know our answer is gonna be then cry 'cause we don't kiss your ass and change our views to suit you. On occasion, we even make fun of you, like now for trying to be something you ain't."

And then you've got all manner of apologists and excusers for misbehavior and criminality. Thank God for the few who have the backbone to speak against it.

"That is correct. Thank God for the people who don't back down from your tactics, no matter how many names you use."

I have read opinions that complaining in a CB newsgroup does no practical good. Maybe they are right. I can see right away that there is a lot of effort made to squelch these complaints and otherwise keep a lid on them.

"Really? Where? We love a good debate about the rules. You showed what you were seeking by the name calling. When one calls names, especially repeatedly, it is proof of their inability to debate the subject at hand. Do you not agree?"

I also think that RCI and some of the other manufacturers are at fault, and maybe they are a better target for complaints. I am going to write to ham organizations and my congressmen to see what can be done about stopping the spread of these inexpensive "fake" ham radios that are turning everything above 14 mHz into CB.

"You go girl. Did you think about what name you will use?"

However, that doesn't mean their sellers, supporters and users are "innocent victims" either.

"Let's see. If I sold the radio, I don't think I would claim I was a "victim". If I was a supporter (?) I am pretty certain I would not be a victim. You must have a crime before one has a victim. By stating that a "supporter" can not in any way be an "innocent victim" is to suggest guilt. Suggesting guilt for a mere supporter is exactly what you and your cohorts have been trying to do ever since you arrived. A skunk may masquerade as a peacock all the livelong day, but the stench is still there. Benefit of doubt withdrawn."

Assumption #1: It is not my job to enforce the law.
Response: It is my legal right, moral responsibility, and independant choice to enforce any law I see fit to enforce. But I am not enforcing -- or breaking -- any law by posting in this newsgroup.

Assumption #2: I get upset about the law being broken.
Response: I do not get upset about any CB law being broken. On the contrary, the more RF pirates that break the law the better.
Assumption #3: The breaking of the law does not directly harm me, a friend, or a loved one.
Response: RF pirates affect me directly in my work.

70's Astro Beam:
The 40Db front to back ratio seem on the money to me.
In Queens NY in the 70's I had the Spanish gypsy cabs running crazy power,
that beam turned away from them took there signal down to NOTHING !
More than my old Long John beam.
The Astro Beam was a incredible performer for its size, 11 or more dB over a
ground plane I believe ?
The TVI it gave was MURDER, remember at the time there was no cable TV.
Everyone had rooftops and twin lead and the first generation crummy AC-DC
TV's
, Joe
Anyone wants I have a Comstat 35........ $35

Landshark >>

It makes perfect sense to me. Of course, it's my opinion.

To answer your question, I have been on the Internet since it was Arapanet in the early 1980's when the bulk of traffic was carried on VAX 11/780 mainframes.

Now a bit about you. Let's start with your full name.

James Piolrett

<< Uh oh, I'm in the crosshairs now, eh? I don't turn a totally blind I to anything. I acknowledge it's existence, work with the situation "at hand," and "get past it!" Hence, "que sera." I've NEVER given any "nod of approval" to illegal high power so I don't know where you inferred that from. As for thr piracy, (read "freebanding") how many pirates have you personally turned into ex-pirates with that attitude. Before you go off on rant about other people's positions, you might want to consider the "success rate" of the parties accused. Are YOU part of the problem or part of the solution. >>

Bert,

Sorry for my brusqueness but I like to call a spade a spade. My point is that you and Dick can elmer all the freebanders you want, but if what you end up with is a bunch of freebanders with ham tickets and freebander attitudes (i.e. FCC rules can be obeyed or broken depending on how one feels at the time) then YOU are definitely a BIG part of the problem.

James

>5th collumn pinkos!

QRM responds:
Dave, Dave, Dave. Once again, you stray into areas about which you know little.

The URL above is maintained by a non-ham, with reports contributed by some hams
but mostly non-hams. In fact, ham radio has very little to do with FRS
evaluation, other than licensed folks bringing their experience to the table
and answering technical questions for the non-licensed.

Kinda like 11 Meters, if you think about it.

My thanks be unto you! Whatever they were, their harmonic rejection was about zilch. Couple it to the 8 sweep tubes in parallel cooled by a phonograph motor line-ee-ar and TVs, telephones, and the local airport went dark.

Actually, James, no. It simply recognizes that given there are probably
200k active amateurs vs some godawful number of CB rigs in existence. They
do not sell Ten-tec gear at the local Walmart. So anyone who becomes
radio-active has a far higher probability of doing so via CB. Wouldst that
it be otherwise but that is reality.

A few rigs later, he ends up on freeband with his ICOM, Yayhoo, or whatever.
In the heyday of CB in the 70s it was noted by the marketing types that the
average guy went thru seven rigs in the course of his CB career; I doubt
this has changed a hell of a lot. Before me or any other prospective Elmer
gets to him, the damage has been done if damage it be.

The question is what to do about it when the dawn comes and he realizes he
is not exactly where its at in terms of hobby radio. Aside from being

better-equipped than a lot of OT Extras, he really generally does not like to be in the position of being illegal (he doesn't need you to tell him that) and it begins to occur to him that doing it legally has its rewards. Enter Elmer.

Granted this is a different relationship than it once was. In days of old when knights were bold virtually anyone with a professional interest in electronics at some point obtained an Amateur license along the way. The local TV man might be building a monumental power supply out of scrap transformers, etc. Things were simpler in the vacuum tube era and there is not the call for fixers, broadcast engineers, etc. The gulf is wider now between the designer, the executor, the fixer, and the amateur. But interest in radio lives on.

So what would you have me do with the errant freebander, brand him? He is a freebander, not a child molester, so some sense of perspective is in order. What I do at least is to help if I can leading to Go Ye and Sin No More. I don't think I have to justify myself to you or anyone else for simply following reality.

Speaking of reality, when are you taking the code test?

>get a cb radio frs are junk

Each has its place, Redwolf.

FRS has the advantage in theme parks, kids riding bicycles, familes in shopping malls, and keeping up with the group at Wednesday's fireworks displays.

The units are lightweight, the antenna won't poke someone in the eye, and the battery life is excellent (8 to 10 hours). Furthermore, you can set the radios so you don't hear other stations on the same channel. This is great on a family outing!

Real amateur radio!

Yeah -- go to RCI's site and check out their new 6-meter mobile rig!
They say it's excellent to take to those "field trip contests" -- hey
RCI, if you're building ham gear, get the No. 1 contest of the year
correct, MORONS!!!!

On top of that, did you notice the nice PA feature on that new 6-meter
rig? Oh boy, I gotta get one!!!

CB crap.

Well tell us what the 2nd and 3rd order intercept points are plus the
blocking dynamic range. Please also let us know the transmitter phase noise
and 3rd order IMD numbers.

What you saying is just heresay CB crap.

All of your diatribe aside, the RCI is useless on SSB for 10 meters. It still has the "roger beep". Does it have the innate capability to run an external changeover relay or connection on the rear apron to control an amplifier?

Nobody is trying to tell you how to control the frequencies. There is legislation/law in place though.

I can only assume that you approve of the bandit use on the lower end of 10 meters.

My original call was KA4PBD - it is now N0DGN. No vanity call issue at all - I happened to be in 0 land and checked the wrong block on the 610.

Anyway you stack it - the RCI-2985DX is not a ham rig. YOU know it - we know it. Get a grip!

Hmm, and still another closed mind. Your loss, not ours. I'd rather pay $300 bucks for an all mode rig than $400 dollars for one that will only do FM.

I never was much of a "field day" participant, mostly noise and confusion released on the bands (kinda like channel 19 cb). I have made a lot of field trips with radios though.

Maybe I just misunderstood the posting. Or possibly the word "for" was accidentally deleted between "correct" and "morons" ?

Pretty nutty! Actually FCC rules were written by hams with
years of experience in order to allow the maximum flexibility
of operation without jamming fireman, ambulances and
aircraft in flight. The rules being a guidebook of how to do
just that. Even the self-policing policy reinforced that.
I know that has been changing lately as corporate lawyers
take over more and more

I see this mentality borne of the CB experience of anarchy
and I wonder what do they want with Ham radio anyway?
It just seems they want Ham tickets so they can get even
for some imagined oppression. It's like bringing a bat to
a golf game and throwing a tantrum because they can't
get on base... Actually, it is people like that who infiltrate
our government and threaten all our freedoms by getting
citizens to throw away their rights in the hope that the
government can do something about it.

They probably pee in their own food to mark it.

Rights/responsibility vs. parent/child

Act like a child, get treated like a child. Turn 18 and look out!

C'mon VE's, quit being easier than a teenage hooker and
show a little more fortitude and discretion.

But you can get a whole bunch of used 5 band radios for $200 or less.
I see used HW-101s for $100 with the manual, and it's a great
learning experience. You can have a lot of fun while you save your
money for antennas and upgrades. My primary radio is a TS-830s
because it's a man's radio with great features, performance and a
solid feel. Some of the newer stuff is just so chintzy.

That ranger thing is just a busy box for the playpen. It's bigger
than a IC 706 though.

With all this bs going on about who is operating illegal and some mental case posting threats to report you to the Feds,I think I am going to go mobile.I got a GMC 1.5 ton van and there is lots of room for an operating desk,gen- erator, etc,etc.They got those temp antenna masts that go up in a flash.Well what do ya think? I t would be a base station on wheels and if you operate from a different QTH each time,it is alot harder to find you.

"8"

2 people with beams and accurate direction meters on their rotors could
pinpoint you in under 10 seconds. The FCC has equipment that does this
automatically, without the math, and can nail you in under 3 seconds...
So now, not only are they going to confiscate your radio, amp, etc, when
they raid you, but they're going to impound your car, too, as part of
the station... That's intelligence for ya...

-SSB

(Some of you might be wondering why I call him "8"... well, it's
simple... in a composition window (or IRC window, word processor,
whatever), hold down the ALT key and type 056 on the keypad on the right
of your keyboard. Now release the ALT key. What just came up?)

(888 <-- the number of the beets?)

-SSB

The GB's (good buddies) can't comprehend - and don't care - about those
things. As long as the rig has 200% modulation, transmits a 50 kc wide
signal, and can drive their "leeneer's" they are happy. Throw in a few
extra knobs and buttons and a big meter with lots of "swing" and they are
in chicken band heaven...

Hi James or Doug or Proziac or Frank,
Good try but there has only been three post ever
made by you, only in the past week, on this group,
so A for effort.

Have a nice day,

Landshark

KA6 Oh gosh part of my ham call, darn. >>

In the short time I have been reading this group it has become glaringly apparent that there is something very odd going on here. I am sure any other outsider can see it, too. If I were a psychiatrist I could identify it, but alas, I am just a poor retired electrical engineer. I will leave the job of analyzing it to professionals.

Regards to Dick and Bert who had the class to reply civilly.

Otherwise, as you can see the expected profanity and attacks against me have surfaced on schedule and as predicted , apparently motivated because my opinion happens to step on the toes of individuals feeling that illegality has its place in CB.

And now this Landshark person (whose rather rude question I politely answered) tells I am actually someone else, that I don't exist, except as part of some conspiracy.

It's crazy - like Alice In Wonderland - and entering this newsgroup is like taking a trip down the rabbit hole. But perhaps that's the way the residents like it?

James Piolrett

Not being familiar with the ARRL tapes, damfino. More than likely you aren't hurting a thing because it is generally better to practice in a number of ways. At a STOP sign, di-di-dit dah dah-dah-dah di-dah-dah-dit might cause the people in the car to look at you funny but it is valid code practice.

It will be a fog for a while which will clear pretty suddenly. Nudging it a tad never hurt anything.

Dick, Bionic Klutz

<< The question is what to do about it when the dawn comes and he realizes he is not exactly where its at in terms of hobby radio. Aside from being better-equipped than a lot of OT Extras, he really generally does not like to be in the position of being illegal (he doesn't need you to tell him that) and it begins to occur to him that doing it legally has its rewards. >>

Here's a point where you and I disagree, Dick. The illegal CBers I observe generally are not all that bothered about being illegal. As they ascend the equipment and experience curve, they are bolstered by the knowledge that they have an illegal infrastructure to supoort them, and that many hams will (inexplicably) turn a blind eye to whatever occurs in the 25 to 32 Mhz spectrum.

The latest trend is that these 'alternative CBers' are now demanding "respect" and wanting to shake off the illegitimacy associated with illegal radio use. They actually get upset at the suggestion that their hobby is based on breaking FCC law.

If you don't believe me, witness the rather dogmatic and strident pro-illegal postings in this group, or the 'freeband' activity in POPULAR ELECTRONICS magazine, or the popularity of various 'freeband' clubs and organizations, or the apparent spread of "keydowns".

As illegals gain 'respect' they have less and less motivation to become legal. The "dawn" you spoke of never comes. Adding to nthe problem, manufacturers will follow the path that leads to most profits, creating thinly disguised CB radios designed to be modified by anyone with a screwdriver.

No, I do not condone persecuting illegal CBers, but neither do I condone making illegal CB into the functional equivalent of the amateur Novice Class license.

The advice of "go ye, and sin no more" can hardly have any effect at all when the answer is increasingly becoming "Why should I?? It ain't no sin!".

James, do a look up on Google of Landshark, You will find him to be quite amusing, he is a registered homo, he posts to alt.sex groups looking for love, this is not a joke it is true and can be seen by anyone who wants to take the time to see what they are dealing with here. and he has argued with most everyone in the NG at one time or the other regarding everything and anything. Don't let them chase you away this is what they want, just as it is on the airwaves they use intimidation tactics and quote we know were illegal what do you care? Were not hurting anyone. I mean whats it gonna hurt if we do a little freebanding? Uh amplifiers are legal to sell to other countries, yeah thats it we are exporting the amps, even tho the rest of the world has a 4 watt limit as well. Yes you will hear all kinds of things, how you are lieing about everything. And just because you oppose illegal CB you Must be 1 of 2 or 3 people. God knows there couldnt be more.
So thats what this NG is all about. Get used to it. The illegals will fight you like there cause is legal and or noble, How dare you say anything negative about freebanding or amplifiers or illegal radios....

I know there are lots of opinions in this group so I'm asking for any opinions on the compact Cobra 19DXIII CB radio. I'm looking to put one in each of my trucks for a trip from Texas to Colorado. I'll use these with a 4' Firestik II and a hood mount.

Thanks for the flowers, om.
Let us not forget that this is a hobby; CB or amateur radio.
I hate to admit it, but there are certain people who should never have
access to a micophone (my ex is one of them).
I like to think that is the exception rather than the rule.
Knowledge is useless unless you share it. I'm willing to pass along what
little I have to offer without passing judgement.
As far as the "holier-than-thou" crowd: I heard the ARRL is looking for
some lobbyists.

You make a point. Just what is meant by 'respect' is a subject worth beating up independent of CB radio; it certainly means something different that what I mean by it in a lot of cases.

As I believe you said you are retired and I am probably five years away from applying for my vested bennies, we have met a lot of bozos with the backward hats, Elvis sideburns, and misplaced pubic hair around the mouth. (BTW the hat thing started with Catcher in the Rye about 1950 but then rap is the Rhyming Blues from the 20's). The woods are full of them and the only cure is an early death. This bunch is hopeless and the only real answer is take away their toys. As most of them would have trouble filling a water pistol it is a fair bet that without the infrastructure that has grown up around illegality they would take up something else to prop up their non-existent manhood. So unless and until our government leans firmly upon the manufacturers dissing these characters is an exercise in futility. The 2985 that is the subject of this thread has IMD and intercepts that would gag a goat; classic oriental front-end, collapses in the presence of a strong signal within 50 kHz like a cheap tent in a stiff wind. It is right up there with a 1936 Zenith using a 6A8 pentagrid converter tube but the Zenith works better.

I have stated here many times that AM should be outlawed ultimately in CB and as an Amateur I would be willing to give up AM in the 10 and 12 meter bands. It disturbs me greatly to see new hf rigs that will do Ancient Mary. And I have contacted my Congressman who sits on the House Commerce Committee with Billy Tauzin, head Republican fund-raiser from Louisiana.
It should be remembered that Riley got into business because the Amateur Service demanded a return of FCC enforcement. That, to me, makes more sense when the average ten-meter interloper doesn't have a clue he is even on ten meters -- Channel 19 two up.

You may question my approach to Life's Losers, although I would challenge you to come up with a better one, which is simply to ignore them and try to point out that clipping the limiter is self-defeating in terms of 'talk power'. Where we differ for real is the collection of relatively innocent souls with lots of interest and a modicum of technical couth, the guys playing with antennas, the eager ones who are beginning to see the sense in having parts of HF to operate in, and quite honestly those who are getting a bit tired of dealing with Life's Losers on a daily basis.

Now I am not recruiting for the Amateur Service; beyond providing the three classic websites and trying to clear away some misinformation -- any selling I do is as an example of an OT ham . The ARS will sell itself or it won't. I am a ditty-bopper but do not turn white and shake at the prospect of codeless tickets; but I will provide objective fact -- it is not even on the 2003 agenda at the moment and could easily take until 2005 even if it makes it. Much like the BBC World Service or VOA or Radio Netherlands all I am selling is what I consider credible fact or well-founded opinion -- make of it what you will. I think it beats hell out of preaching.

Freebanding, at least in the 405-999 area is about 30 years old and appears like Brigadoon every few years depending on the sunspot cycle. The FCCs first reaction to it was to legalize the 28.3-28.5 phone band for every coded class (international treaty requires Morse code below 30 MHz) to form a defense line. They knew and everyone else did as well that the same Yayhoo 101 with the clipped brown wire that had been at 27.7 simply moved up. As LBJ said, it is better to have them in the tent pissing out than out of the tent pissing in. Nor is it the only place bootlegging is going on; the fishing fleets are notorious. Again, so long as the village idiot can or knows someone who can mod these radios with open PLLs there is always someone looking for the clear channel, the private channel, or the company channel. Incidentally, I have also advocated using a Land Mobile band, which is what CB theoretically is, for truckers who are the main American interlopers into ten meters. Freebanding in their area would be a hair-raising experience wouldn't it?

Do I approve of it? Hell no. But like a lot of other things it is something of long-standing that, while indulged in by a lot of major losers does have some souls in it that got here by means that seemed like a good idea at the time. So where you feel called upon to play Rent-a-Yenta I choose to play grandpa -- or myself, they are interchangeable. Simple as that. Guess it's a question of the assumptions you make going in and what you judge is the magnitude of the crime. Maybe we just have to agree to disagree.

If you have noted a small decrease in activity in the NYC area in the last
month or so a whole lot of gypsy cabs and two trucking companies bought the
big one for operating above 28. All mobiles please note.

Bert,
Sorry for my brusqueness but I like to call a spade a spade. My point is that you and Dick can elmer all the freebanders you want, but if what you end up with is a bunch of freebanders with ham tickets and freebander attitudes (i.e. FCC rules can be obeyed or broken depending on how one feels at the time) then YOU are definitely a BIG part of the problem.
James

"Sorry for mine as well. My point is you and a few others who are so yellow that you change names more than you do underwear are responsible for more discontent and problems on here than anyone. Your first post you took to namecalling. Anyone even remotely interested in you after that is for mere folly. You, sir, ARE the problem as far as this ng is concerned."

Lots of people are picked up every day and the cases are building against others. I have been up to the government monitoring post and I have seen how fast they can track you. 6 seconds is all it took us to track one of the police cars that we were using as a test case. A few things to remember is that the government will not spend a penny unless they have to and they go home at 4:30 pm and don't work weekends. The key is to not step on any licensed commercial operators with harmonics and so on because if they complain the government will find you and you will be cooked.

In the short time I have been reading this group

"Dig, Leland, Dig."

it has become glaringly apparent that there is something very odd going on here. I am sure any other outsider can see it, too. If I were a psychiatrist I could identify it, but alas, I am just a poor

".....hence the HUD property apartment and trying to get around zoning laws and erect your antenna where prohibited."

retired electrical engineer.

"I am glad you stated that, Leland. It makes this so much easier to discredit you in everything you say..bear with me now..a little bit more."

I will leave the job of analyzing it to professionals.

Regards to Dick and Bert who had the class to reply civilly.

"I am certain it means the world to them coming from you Leland. It will mean even more when you pass the code portion."

Otherwise, as you can see the expected profanity and attacks against me

"You lie like a rug. It's second nature. I didn't attack you and you ignored my questions 'cause I bury you everytime you lie, which is constantly."

have surfaced on schedule and as predicted , apparently motivated because my opinion happens to step on the toes of individuals feeling that illegality has its place in CB.

"Has nothing to do with your opinion. YOU called names because of OUR opinions. That makes you a hypocrite. Always did."

And now this Landshark person

"You ain't right Leland. You are deeply warped and in need of help. In one short second, the entire news group will agree with me. Just keep on rolling your trash."

(whose rather rude question I politely answered)

"You didn't answer my POLITE questions."

tells I am actually someone else,

"You are."

that I don't exist, except as part of some conspiracy.

"It's true."

It's crazy - like Alice In Wonderland - and entering this newsgroup is like taking a trip down the rabbit hole.

"Ah,, your forever undoing, your ego and mouth, the little things like the catch phrases and old habits that cant die.....

Are little Green Men going to come out of the sky after they track your mobile? 6 seconds I am impressed but they had better had someone in the immediate area to actually catch them in the act.

Well folks, its been fun, but I'm kinda tired of all this now. You all can keep this one going on forever if you like.
Somehow, all I can think of right now is a song on the Hell Freezes Over album by the Eagles; "Get Over It!"

Have a nice day,
Bye for now.

Charlie...

They did that with the DF. No requirement to leap up in your Batman costume and say Gotcha. The tape is all that is needed. A license number will suffice.

Dick

Twisit you are a very sad individual if you think this is Frank or anyone
else you know.
You are already accusing this guy of being Frank. I think you need to sit
back and take a few days off of posting to the NG. Your brain is getting
warped. But thats par for your course you blame anyone and everyone, so
eventually you have to be right I guess. Remember . "Just because you say it
doesn't make it so" Words you should live by.
Why! You have no proof or justification to accuse james of being somebody he
is not . That takes alot of balls. Again you fail to meet the burden of any
proof just your usually " If twisite said it it must be so"
Get lost

Re: Check Out New Radio: RCI-2985DX

Group: rec.radio.cb Date: Mon, Jul 2, 2001, 8:23pm (EDT+4) From: piolrett@aol.com (Piolrett)

<< The question is what to do about it when the dawn comes and he realizes he is not exactly where its at in terms of hobby radio. Aside from being better-equipped than a lot of OT Extras, he really generally does not like to be in the position of being illegal (he doesn't need you to tell him that) and it begins to occur to him that doing it legally has its rewards. >>

Here's a point where you and I disagree, Dick. The illegal CBers I observe generally are not all that bothered about being illegal. As they ascend the equipment and experience curve, they are bolstered by the knowledge that they have an illegal infrastructure to supoort them,

"Here is where you are mistaken, Leland. The first part of your sentence was ok because you were giving your opinion on what you perceived (even if you ARE wrong). Then your arrogance comes into play and you blanket cbers with the asinine statement that if someone is illegal,well, by God, you think you know why. Thing is, we don't seek support from others, you do, but this has been pointed out to you over and over and over, yet you still deny and masquerade as someone you are not, but we do understand. We would like you to be someone other than yourself as well."

and that many hams will (inexplicably) turn a blind eye to whatever occurs in the 25 to 32 Mhz spectrum.

"Here is your heresay."

The latest trend is that these 'alternative CBers' are now demanding "respect" and wanting to shake off the illegitimacy associated with illegal radio use.

My God, Leland. Where do you come up with this garbage?"

They actually get upset at the suggestion that their hobby is based on breaking FCC law.

"No, that is more of your illusions to justify your surliness."

If you don't believe me, witness the rather dogmatic and strident pro-illegal postings in this group, or the 'freeband' activity in POPULAR ELECTRONICS magazine, or the popularity of various 'freeband' clubs and organizations, or the apparent spread of "keydowns".

"In other words, the times they are a changin', or, to put it in words a "retired" person will understand, since you were there the first time you heard it, you shall understand when I say, you better start swimming or you'll sink like a stone."

As illegals gain 'respect' they have less and less motivation to become legal.

"So THIS is why you are such a jerk to anyone that freebands or someone who asks a mod question. My, you must feel generous for spilling your guts this week, Leland. Now we understand your rationale. You can't, no, let me rephrase that, you WON'T give anyone you deem illegal, respect because you are afraid that will cause them to have LESS motivation to become legal. Gotcha! Fair enough, but quit whining when those same people diss you, si?"

The "dawn" you spoke of never comes. Adding to nthe problem, manufacturers will follow the path that leads to most profits, creating thinly disguised CB radios designed to be modified by anyone with a screwdriver.
No, I do not condone persecuting illegal CBers, but neither do I condone making illegal CB into the functional equivalent of the amateur Novice Class license.
The advice of "go ye, and sin no more" can hardly have any effect at all when the answer is increasingly becoming "Why should I?? It ain't no sin!".

"Practice what you preach! End of story."

Assumption #1: It is not my job to enforce the law.
Response: It is my legal right, moral responsibility, and independant choice to enforce any law I see fit to enforce. But I am not enforcing -- or breaking -- any law by posting in this newsgroup.
Assumption #2: I get upset about the law being broken.
Response: I do not get upset about any CB law being broken. On the contrary, the more RF pirates that break the law the better.
Assumption #3: The breaking of the law does not directly harm me, a friend, or a loved one.
Response: RF pirates affect me directly in my work.

> modulated envelope with amplification of the RF sine wave itself.

I am not confusing anything. Class B amplifiers (RF and otherwise), by
definition, only conduct for half of the waveform. For the other half
of the waveform, there is no linear relationship between the output and
the input. By your definition, a diode would be a linear device.

> > The maximum theoretical efficiency for a truly linear class A amplifier

That doesn't contradict anything I said. Does it?

> > Yes, they will fail. They will be dissipating the power from the other
> > transmitter.
>
> I have pointed out sources where you can get further information that goes
> in to much more detail. It's up to you to do the reading.

It's the old "go look it up" response. Just tell us.

Let's go back and reexamine my claim which is 100% true. I'll give
you more reasons why your reasoning is not correct.

I wrote:
> > > Consider this: What if you have two transmitters transmitting into
> > > each other? By your description, all power would constantly be
> > > re-reflected. No transmitter would ever dissipate the power from
> > > the other transmitter. The power traveling through the transmission
> > > line would approach infinity over time. I guarantee that it does
> > > not work this way.

You incorrectly responded:

> > Of course not. The feed point impedance of the coax would be all wrong, thus
> > you have the wrong loading on the output stage. If nothing was done to
> > protect the output devices they will fail.

Now, you have pointed me to the "Reflections" article which describes a
conjugate match. A conjugate match cannot be obtained unless the
transmitter has some impedance that does not provide full reflection.
For example, it cannot appear to the RF as a short or open; it must
have some impedance that can be transformed to the impedance that
provides a conjugate match and this will require a resistive component
in the impedance.

I'd like to see you attempt to give me one example that contradicts
this truism.

Now, given that you have a transmitter that can be tuned to a conjugate
match, if you were to transmit into it, power will be dissipated by it
under all but one condition. That condition is if you have a conjugate
match. The odds of a conjugate match with no tuning are very small.
The transmitter could be any one of an infinite number of impedances;
only one impedance is the complex conjugate of that impedance.

So, based solely on the article that you referenced, you are virtually
guaranteed that you will not have total rereflection of a reflected
signal as you claim. Your cited referenc article contradicts your
claim.

> I have consistently asked you how a source with a 50 ohm resistive internal
> impedance connected to a load of also 50 ohms resistive can have an
> efficiency greater than 50 percent.

It cannot. I told you that.

> The example was one that you proposed.
> You can't explain it. I also suggested that you contact a major manufacture
> of RF amplifiers and ask them what their products efficiencies are to
> convince you that it is indeed greater than 50 percent.

Because the are not truly linear. They use nonlinear techniques (Class
B, Class C, switching, etc.) to obtain the higher efficiencies.

> Between those two
> items, the "common sense" conclusion about amplifier efficiency from your
> example, and the real world data from a manufacture that will contradict
> that conclusion, should get you thinking that a wee bit more is going on tha
> t you suspect.

This contradicts nothing that I have said.

> controlled voltage source" is not linear? And I have a feed back circuit
> that will linearly reduce the output voltage linearly with the increase of
> output current is also non-linear?!!!

Tell me how you can tune your perfectly linear voltage controlled
voltage source for a conjugate match as described in "Reflections."
When connected to a transmission line of 50 ohms characteristic
impedance, it will appear as a source of 50 ohms impedance.

What happens when your perfect voltage source encounters reflected
voltage and current from the transmission line? It will have to work
harder to counteract and cancel out the reflected voltage and current.
How much harder? It is equal to the power of the reflected signal.
Hmmm. I guess you could say it is dissipating the reflected signal.
Does this sound familiar?

> > > > There definitely IS dissipative resistance presented by a linear
> > > > transmitting device. See the "infinite power" scenario above.

> > > I just disproved that above.
> >
> > You did no such thing.
>
> As I stated before you can get that article I mentioned and read it for
> yourself. Then you can take up your arguments with the author and the
> handful of university professors who reviewed the article too.

Just tell me how you can achieve a conjugate match with a transmitter
impedance which contains no resistive component. I just need one valid
example to convince me.

By the way, you never addressed my item indicating why SWR meters do not
sense voltages at two points. I'll repost it here.

If there were two voltage points at a specific distance, the meter
would only operate at a narrow range of frequencies. Many of these
common SWR meters operate from 2 to 150 MHz. A two-point distance
requirement would make this large operating range impossible.

Now a bit about you. Let's start with your full name.
James Piolrett

"No. Let's start with you answering questions put to you before you get
anywhere, pal. Why did my questions concerning your allegations and
hallucinated imaginations intimidate you to the point of wanting to know
who I am. Next you will be blackmailing the group. You have to give to
get here pal, so don't think you are owed anything let alone an
explanation or answer. You come in here swinging with a negative
attitude and a chip on your shoulder slinging allegations and some
honest questions were asked of you concerning those comments you made.
Not answering them has always been your forte, eh?" >>

The "full name" question wasn't even addressed to you, sir. It was addressed
to "Landshark" who, as a condition of discussion, demanded personal information
about me, which I provided.

Mr. Twistedhed, I do not know anything about you except what you have posted
here, but from that alone I can conclude that your handle is very, very
appropriate. Your head appears to be genuinely twisted.

I see you believe that I am someone named "Leland" and your belief is based
heavily on the fact of my mention of a novel by Lewis Carroll. I can only hope
you go further with your investigation. You may discover that hundreds of
thousands of people are familiar with the aformentioned novel. Perhaps this
will lead you to conclude they are all the same person named "Leland".

I feel very sorry for this newsgroup. The inmates have truly taken over the
asylum. I must say that my visit here was most educational and enlightening.
If not for the cross postings to rec.rado.swap I would have never known that
such people and attitudes existed. As so uniquely stated by the supporters of
illegal CB, I am out of place here. So I will fulfill their request and exit
without further comment.

James Piolrett

It appears we have rhetoric going on here. I agree that code is still essential to amateur radio, the problem is that many communications experts do not see it that way. Everyone is going to have to get used to what is apparently going to happen, whether we like it or not. Best Wishes,

I wouldnt support this line of rigs for the one reason is that they are mostly used by CBers. They sell them everywhere and thats why 10 and 12 meters are full of idiots. They have a new 6 meter rig coming. But screw then TEN TEC has a 6/2 rig that i would buy anyday before that cb based crap.

Subject: Re: Check Out New Radio: RCI-2985DX From: twistedhed@webtv.net (Twistedhed) Date: Mon, Jul 2, 2001 11:30 PM Message-id: <6383-3B410405-112@storefull-128.iap.bryant.webtv.net>
Now a bit about you. Let's start with your full name. James Piolrett
"No. Let's start with you answering questions put to you before you get anywhere, pal. Why did my questions concerning your allegations and hallucinated imaginations intimidate you to the point of wanting to know who I am. Next you will be blackmailing the group. You have to give to get here pal, so don't think you are owed anything let alone an explanation or answer. You come in here swinging with a negative attitude and a chip on your shoulder slinging allegations and some honest questions were asked of you concerning those comments you made. Not answering them has always been your forte, eh?" >>

The "full name" question wasn't even addressed to you, sir.

"You are correct, it wasn't. But many questions were posed to you, by me, before you asked any yourself of he. Etiquette dictates a reply. You ignored the questions, such as why you made the statement about cbers using anything above 14 MHZ. Then you called me a name when pressed. Go fish."

It was addressed to "Landshark"

"As my priors were addressed to you."

who, as a condition of discussion, demanded personal information about me, which I provided.
Mr. Twistedhed, I do not know anything about you

"That is correct. You don't. So why come in here and misspell the word "psychosis'" when referring to me for asking you a legitimate question. Better yet, why would you use a derogatory term at all concerning me if you know nothing of me? The questions I posted that elicited an insult from you were not deserving of your misplacedanger."

except what you have posted here, but from that alone I can conclude that your handle is very, very appropriate. Your head appears to be genuinely twisted.

"Thank you. I chose the handle myself. You shall never hear me deny that fact."

I see you believe

"No. I know you are. Ask me for proof now Leland, ya' know ya' want to."

that I am someone named "Leland" and your belief is based heavily on the fact of my mention

"Wrong. You instantly go to damage control. Man, you had plenty of practice at being sleazy, eh? Doesn't matter what I believe. I just tossed out the consistent phrases you use."

of a novel by Lewis Carroll. I can only hope you go further with your investigation. You may discover that hundreds of thousands of people are familiar with the aformentioned novel.

"Ah yes, but only you Leland, as used it in your posts as an analogy on usenet here on rec.radio.cb. And only you specifically mention"Alice" and me going down a rabbit hole. HAHAHAH! You did it again, Leland. AS I said, it matters not what I believe, so I will just sit back and watch you try to convince everyone how you aren't Leland. Then I'll watch you attack me, call me some names as Leland, and change the subject into something that has nothing to do with you being Leland. Such as, oh, I don't know, maybe an old post of mine. Keep your radio on standby in the AM hours. You know the freq."

Perhaps this will lead you to conclude they are all the same person named "Leland".
I feel very sorry for this newsgroup.

"Sure, sure. We know. You've said it a million times. The better for the ng...for the good of the ng., etc, etc...no one cares Leland. No one."

The inmates have truly taken over the asylum.

"You've said that too Leland. Many times,. Do a google search of that one too. We'll see some more of your cb alias handles."

I must say that my visit here was most educational and enlightening. If not

"If not for your spelling lessons, for nothing else."

for the cross postings to rec.rado.swap I would have never known that such people and attitudes existed.

"Hmmm, wonder who started the crossposting?"

As so uniquely stated by the supporters of illegal CB, I am out of place here.

"For your rudeness and your surliness and your name calling, not for your views."

So I will fulfill their request and exit without further comment.

"Don't let the door hit ya' where the good Lord split ya'!"

James - not anymore

Hey I am triying too squeeze time when I get home at night to check this thing but I cannot everynight so I just have it auto and write when I can . Working trying tomake ends meet. I talked with ICECOLD and he suggested that I get on the ng and talk a bit with people. I have not been on the radio for a longtime nor do I even own a rig.
Though I have not fogotten much I do not think, I am sure many are suprised I am here but I will be more idle in the background . Work lots of hours trying to pay off debts. I will stop in as often as I can and want to tell ICECOLD he was right about me enjoying interacting with people on the newsgroup. I am sure many people have learned alot. Looks like Professor has come around aswell which makes me smile . I never really disliked him at all. I just have a hard time with people disagreeing with me. Personal faults in me I guess. I hope maybe I can give information and get information from all of you. About ac mobiles, Goldfinger or bluegill I think is doing about 125kw or so AC. Some of you may want to clarify on that as the wattage may have gone up . I personally like DC for the fact that I can have a reserve of power. I really would not run more than about 10kw if I was playing. I think a little 2 driving 8 will do fine for number 1 driver will do you fine for everyday things. and just cruise . Owell maybe I am rambling hope you all take care.

I would say it's fine. I imagine you just wish to talk between each of your trucks during the trip.
Considering the terrain, you should be able to be (maybe) 25 miles apart and still communicate with barefoot radios (depending on the amount of skip rolling in).
Advantages would be compact size, easy to install, easy to operate. Also, if skip is rolling in too strong you can use the PA feature this radio offers as an optional means of communication.
Drawbacks would be no sideband capability, no extra channels, your friends may laugh at it.

As for me..... It would have to be a radio of large physical size, many switches/buttons/knobs/menus, ease of operation would range between intermediate and difficult. Out-of-band capability or additional radio (two meter, depending on if the other driver is a ham) would be necessary because of skip conditions. The Kenwood TS-440 or Yaesu FT-900 would work quite well. In a pinch maybe a Ranger RCI 2950 or Uniden HR 2510.
Installation considerations would include adding extra battery to vehicle (just in case I get long winded), linear amp and, of course, antennas (roof mount, 102" stainless steel whip with 6" spring /dual band- 2m/440 Larson NMO hood or trunk lip mount).

Greetings!

In a word, it doesn't matter. Personal considerations. Ride height, overall clearance and performance are the key parts to consider - for your vehicle.

You can find a difference between different brands of antennas, but if the MFGR of the antenna built a 5' or 6' model, you'd find little difference. There is some, but you're looking at marginal returns for the effort.

Thats what makes this question not an easy one to answer. You'd have to switch to another brand or model of antenna - and that may, or may not, perform as well as the one you're thinking of replacing.

Now, if height is a problem - as in tree-trimmer accessory. Then using the 5' models or lengths offers the least amount of chances to ruin the antenna and or the mount, when it hits something, compared to the 6' size.

That above statement is the only part I see that will affect the performance.

If you have the mount for it, go for the best or longest antenna that performs like you want.

If you don't like clanking, clunking or losing the tuning of the antenna - run a length that clears the roofline for that longest length and stay with it.

In some installs, the length has to be shorter in lengths to clear the general treeline or overhangs that you'd find on roadways. Simply due to the fact that the antenna and mount could be damaged.

"Extra" Wind noise should not be a problem. Wind drag, that is another story - use longer, only if the mount can withstand it.

On Sun, 1 Jul 2001 20:26:44 -0400, while the modem was busy tying up IRQ's with the Mouse, "Mr. Sabre" <phoenix@neobright.net> dissertated the following:

:+> Alright, just a simple question, then y'all can get back to your bickering.
:+>
:+> Is a 6' whip enough of an improvement over a 5' whip to justify the extra
:+> wind noise and height when you stick it on the roof of your car?
:+>
:+> Thanks.
:+>

:+> Sabre

Well well! Look who turned out to be nothing more than a chicken-shit, loud-mouth, yellow-belly, shit-talking hypocrite!!!! You had your chance but you wimped out!!! Not like anyone would ever expect YOU to stand up and be a man.....

BWAHAHAHAHAHAHAHAHAHAHAHAHA!!!!!!!!!!!!!!!!!

So go right ahead and talk all the bullshit you want about how you are going to beat someone "like a redheaded stepchild" because now we all know you are just FULL OF SHIT!!!!!!!!

Ghez, you think you three would
have something better to do than type to
each other. Anyone that can think will see
that this is just another nic , so who's lariat
are you trying to jerk?
You do a Deja search or a google search
on his name and you come up with 5 post now,
all within the past week, not bad for a guy
that's been on the net for 21 years.
As for me, well fake prozac, you seem to
have enough time to do those things, have at
it and have fun.

Landshark

3612. Wanted: Parts for vintage Sonar base station

Newsgroup: rec.radio.cb
Date: 2001-07-03 14:13:24 UTC
From: k5dh@raytheon.com
Message-ID: <8qk07.188$Mf6.3616@dfw-service2.ext.raytheon.com>
Source record: 87751

OK, vintage CB dudes, I need your help. I'm looking for the
following parts to help me complete the restoration of my
Sonar Model C (the Canadian export version of the Model E):

- Channel selector knob, can come from Model C, E, G, or H.
- mobile mounting bracket and thumbscrews for a Model C or E
(Model G and H bracket may also work, but I'm not sure).
- 4-pin bakelite plug that's used to connect the accessory
S-meter to the jack on the back panel of a Model C or E.
- Operator's Manual for Model C or E (early version).
- Service Manual for a Model C or E (early version).
- Operator's Manual for accessory S-meter (model # unknown).

Can anyone help me out here? Any leads to someone who can?

"Always looking for Raytheon, Apelco, Webster for my museum"

73,
Dean, K5DH

MORE RADIOS FOR PIRATES
MAGNUM IS BRINGING OUT ONE THAT WILL GO AS LOW AS 20 METERS. WE HAVE ENOUGH
CB INTRUDERS AND OTHER PIRATES. THESE RIGS ARE MADE FOR CB PIRATE TYPES.
DONT LET YOUR HAM DOLLARS SUPPORT A COMPANY THAT ENCOURAGES THE BLATANT
DESTRUCTION OF THE HAM BANDS.

A *registered* homo? Good grief. What decade do you exist in?

Don't let them chase you away this is what they want, just as it
> is on the airwaves they use intimidation tactics and quote we know were
> illegal what do you care?

Wild assumptions, bald assertions. You're a *funny* man, that's for sure. Do
they let you out of the looney-bin to use the computer or do you have to
sneak out?

The title of this NG say's it all. rec.radio.cb. _All_ things CB are
germane. Harrassing those that discuss topics that you find offensive, but
that are *on-topic* for this NG is *off-topic*. You are the violator here,
not those that want to discuss CB.

Were not hurting anyone. I mean whats it gonna
> hurt if we do a little freebanding?

Again, who cares? Is it hurting you? Driving up your electric bill?
Interfering with your code practice? :-)

Uh amplifiers are legal to sell to other
> countries, yeah thats it we are exporting the amps, even tho the rest of
the
> world has a 4 watt limit as well.

You must be a Republican. I'll bet all your neighbors have learned the hard
way to keep their drapes and blinds closed when they know you're out
cruising the 'hood, looking for *violations*, right?

Yes you will hear all kinds of things, how
> you are lieing about everything. And just because you oppose illegal CB
you
> Must be 1 of 2 or 3 people.

That is about how it's shaken out and if you tried to be a little observant,
you'd see it. Personally, I think the person that has been littering the NG

with all this Anti-crap has gone on vacation and is without access to a computer. Kinda bolsters the theory that it's been one guy doing it all.

God knows there couldnt be more.
> So thats what this NG is all about. Get used to it. The illegals will fight
> you like there cause is legal and or noble, How dare you say anything
> negative about freebanding or amplifiers or illegal radios....

The only people talking about this issue now are the no-coders such as yourself and those that answer your canned tripe. Get off your high-horse and come to the realization that nobody really cares what you say about radio. I suspect you'd sleep better. :-)

This NG used to be about the free exchange of ideas. Radio theory, antennas, and setups both mobile and base. Now it's become one long and impossibly boring diatribe against free-banding, amps, and such. Who cares, other than a few anally retentive fuss-budgets like yourself that believe everyone should think and act as they/you do?

Jeff

Source record: 87756
Cross-posted to: rec.radio.amateur.equipment,rec.radio.cb,rec.radio.swap

My fellow hams have been raving about the $300 price tag for this glorified CB. Well c'mon, do some research! This particular chicken-band hybrid is the "low power" version of the RCI-2990DX, a 100-watt radio that includes 10 and 12 meters, and retails for $599.95!!!

Can you believe a two-band HF rig for $600? Ham Radio Outlet is currently selling the all-band Kenwood TS-50S, which has many more features and a much better receiver, for only $100 more! Who in their right mind would pay that kind of money for the RCI? (I know, I know.)

(If these radios weren't meant to be modified, then why do they have frequency counters? Do CBers really need to know which frequencies their 40 channels are on? They do? OK. I'll wait for RCI to come out with the first TV set that displays 205.25 MHz when I'm watching channel 12.)

Breaker 27.185, good buddy!

Thanks Dick,

Funny you should mention the STOP sign. I've been using some of the highway signs on the to/from work for this purpose. While I certainly don't nail them all, it does reinforce the ones I do get. Thanks again.

This is addressed to whom ever complained to my ISP...

I hope you are all happy that ATT.NET suspended my account...

Although, you realize. There is more than one, ISP.

Hey! i resemble that in-yer-indo!
I know better than to dick around with a strip-line linear. I would put it
to good use, I swear it.
As for not having any foldin' money: That really hurts, man.

Amp manufacturers/dealers do provide the mods for 10/12 meter use to hams of
appropriate license class.
I believe they will ask you to fax them a copy of your ticket.
They will also tell you how to modify your HF rig for out of band TX if you
provide a valid MARS/CAP ticket.

Train,

Not to be argumentative, but in the last 67 years, there have been many challenges to FCC's authority, and the only successful ones have been on the merits of an instant case and having to do with technicalities and/or lack of evidence--just as can happen in *any* case before a court of law. However, you can be sure that the agents are VERY careful and thorough before any NAL is issued. Even the wording (apparent) is according to judicial law that holds that one is innocent until proven guilty. There have been very few cases brought before a judge that have been won in cases of unlicensed operation or interference. We might like to think that FCC agents aren't smart, but they DO know what they are doing. They pretty well have an offender "caught" before any case is presented or action taken.

We've seen debate here about whether FCC rules are law or not. Yet the thing that IS law is the Communications Act of 1934 which created FCC to enforce same. So the Commission's rules have the FORCE of law whether we deny it or not. So, if we defend ourselves in Federal Court on language contained within the Notice, we will simply fail. It's been tried before.

Whatever parts of the FCC rules we don't like, either in part or the whole, they still have been proven justified time and time again. For example, the gentleman whose case is cited below who "apparently" transmitted false distress signals. Do you have any idea of the cost to the taxpayer of scrambling various agencies to respond to such false/malicious transmissions? It runs into the hundreds of thousands of dollars per case IF it results in the response of USAF, USCG, CAP, and local rescue agencies, and results in the taxing of resources that may be needed at the same time to respond to a REAL emergency. In this case, it appears that his signals were recognized as false before resulting in the marshalling of forces to seek out what is always assumed to be someone in dis-tress. All S.O.S. signals must be treated as real until proven otherwise. If it were OK to get one's jollies by sending out false signals, people would DIE while efforts were expended to discern real from false.

There was a case down in South Carolina a few years where a guy pretended to be in distress due to a crashed aircraft. USAF, USCGA, CAP responded to his calls only to find that he was playing a "trick". Trick was on him; they fined him the TOTAL costs of the rescue exercise---over $100,000!! I think he got
what he deserved. Don't you?

Sideband,

We certainly do have hams that don't follow the rules just as there are CB ops that don't follow the rules. AS to the WARC bands, they are open to any Amateur with a General Class license or higher. Many of the older rigs (prior to
(1979) do not cover these bands because they didn't exist then. So it is perfectly legal to "modify" a rig to cover these bands--I've done it myself. The
MARS frequencies are another question. However, many hams DO join the various MARS and, thus, need to modify their rig to cover these bands. Same with CAP. If a ham operates on MARS/CAP frequencies without the proper authority, he will have, not only FCC to deal with, but the Frequency Management director of the particular military service assigned thereto. If you
don't believe Mr. Hollingsworth is on the job, just listen to www.rainreport.com . Select RealPlayer, or Windows Media to hear Holly himself report on the "busts" of the previous 2 weeks. I am happy to say that he
has kept his promise to deal with the 10 meter incursions and that initiative has
begun!
Hope this sheds light.

My fellow hams

"Whaaa? Your FELLOW hams? Ok, now we know you wanted us to think you are a ham for whatever reason. Ok, that's all cool. How about your call sign? I mean, if it is that important to you what everyone thinks of you as, and you obviously want to be thought of as a ham since you didn't check your ticket at the door, so no problem in asking your call, eh?"

have been raving about the $300 price tag for this glorified CB. Well c'mon, do some research! This particular chicken-band

"That wouldnt exactly qualify as name calling, but definitely a familiar disdain and bias against cbers for no obvious reason. No wonder you didn't post your call."

hybrid is the "low power" version of the RCI-2990DX, a 100-watt radio that includes 10 and 12 meters, and retails for $599.95!!!
Can you believe a two-band HF rig for $600? Ham Radio Outlet is currently selling the all-band Kenwood TS-50S, which has many more features and a much better receiver, for only $100 more! Who in their right mind would pay that kind of money for the RCI? (I know, I know.)
(If these radios weren't meant to be modified, then why do they have frequency counters?

"I haven't seen them. Do they have that giant 'ol channel selector knob we are so fond of also?"

Do CBers really need to know which frequencies their 40 channels are on?

"Ok. I was wondering when the concern for others was going to arise. WTF do you care if a cber wants the channel frequency or any thing else projected onto the ceiling in holographic form or any other way? Why should you care if I have a roger beeping, echo screaming, double whammy twisting repeater siren that sounds like one of my hounds. Worrying about others is a full time activity for you isn't it?"

They do? OK. I'll wait for RCI to come out with the first TV set that displays 205.25 MHz when I'm watching channel 12.)

"Can you mod it to get HBO for free?"

Breaker 27.185, good buddy!

"Tin Fo'!"

Assumption #1: It is not my job to enforce the law.
Response: It is my legal right, moral responsibility, and independant

choice to enforce any law I see fit to enforce. But I am not enforcing -- or breaking -- any law by posting in this newsgroup.
Assumption #2: I get upset about the law being broken.
Response: I do not get upset about any CB law being broken. On the contrary, the more RF pirates that break the law the better.
Assumption #3: The breaking of the law does not directly harm me, a friend, or a loved one.
Response: RF pirates affect me directly in my work.

I think those are the ones I bought (impulse buy with the wife).
They take AAA batteries which don't last too long. I think we replaced the batteries for every couple of hours use.
They're cheap, they work, and they have tone squelch.
You get what you pay for.

Like QRM said, there is no real practical way to add an amp to a FRS hand held. But, one could do it. You would have to obtain an amp designed for 70cm (440 MHz) ham use. The 440 amp would need to operate using 1/2 watt input or less. One of these will set you back $150 to $200 US.
You would have to have a FRS radio with a removeable antenna and you would have to feed the amp with a 13.8v power supply. This would work very well with the mobile rig that QRM mentioned but would be very cumbersome with a handheld.

Remember: Using an external power amp on this band would be a violation of FCC rules.*
If you get busted for it, it's you're own damn fault
Getting your no-code tech license would be the way to go if your interested in VHF/UHF operation.
Taking the test will set you back about seven bucks and whatever you spend on study material.

My first setup as a no-code tech was a Rat Shack HTX 202 hand held 2 meter HT and an HTA-20 2 meter amp. This worked well as long as I wished to stay in the car.

I can't give you any advise regarding what make/model to buy. What I can tell you is to avoid models which use AAA batteries. You will realize better battery life using a model which takes AA batteries.
More fun with FRS/GRMS radio is taking them down to Wal-Mart and messing around with the employees who use them.
"Uh, we need a clean up on isle 10.....feminine hygene products."

Chuck, I guess it was for the post where you threatened to kill someone or you said something about remember Chris Marques, and then you said you didnt post that info, well i guess it turns out you did post it. Be careful what you say there are alot of people out there who thrive on that stuff and are looking to take you down. Perhaps it was that guy wildcat or coondog or whoever you argued with that had a hard on for you.

> definition, only conduct for half of the waveform. For the other half
> of the waveform, there is no linear relationship between the output and
> the input. By your definition, a diode would be a linear device.

Go back and VERY CAREFULLY READ what I wrote again. For a single ended Class-B RF amplifier the energy storage in the matching network makes up the missing other half of the RF sinewave. The "Q" of this matching network must be high enough to prevent a large decay in amplitude of the sine wave between pulses from the anode circuit. The amplifier is "linear" because the "envelope" of the RF sinewave output follows the envelope of the input sinewave, except at a much higher amplitude, i.e. power level. Remember that the modulation occurs at audio frequency, not at RF. Another way to say the same thing is the output matching network also performs the function of a low pass filter, which eliminates all frequencies from the output except the fundamental. So if the amplitude of the waveform drops lets say by 50 percent so do all the harmonics, which includes the fundamental frequency as well. The same happens at other waveform levels too, thus the output is a linear filtered version of the input waveform.

For those Class-B amplifiers that don't use a filter type matching circuit they use a "push-pull" type output. When one half of the amplifier is not conducting its mirror image, the other half, is conducting through the output transformer. Thus both transistors can operate Class-B and still generate a sinewave output. In fact this arrangement is used in many low to mid power audio amplifiers as well.

Chuck, although I am unhappy that anyone has their account suspended (or terminated), it would help if ALL of us (not just you, but everyone) were to at least be civil to one another. We may disagree at times, but some of the mud-slinging and name calling is just causing a lot of discontent. Eventually, some of us will get burned (if not all of us). To others reading this post, this is not directed at Chuck specifically; however, it would seem that some of the hams have been a bit out of control. Some of the CBers have responded in kind. Can't say I blame them. Sure, we have freedom of speech - but that does NOT include yelling 'fire' in a crowded theatre now does it?

My 2 cents worth and 73 from Rochester, NY

The ones I used to hear on 10m couldn't touch much of anything. I
can't remember the exact model number, but the ones I've heard over
the past few years have had to be some of the most pathetic radios
I've ever run across.
Constantly FM'ing, RF problems with the audio. etc, etc. A friend of
mine had one, and the transmit audio was so bad you couldn't hardly
use it. I used to talk to a guy in CA with the same problem. I ain't a
jokin...My 706 would eat one of those suckers for lunch and spit out
the seeds. Oh heck..Any radio I have ever had in the last 20 years
would have been better...:/ And I don't have high end radios either,
except for my 830. "it's old now, but was top of line kenwood when it
was made".I'm not on a ranger dissin program, but they were bad bad
radios back in the late 80's early 90's. And still are I imagine,
until I see different. MK

Mopar, I ask you again, where did he infer there was a gun, or rifle. Many cameras have great scopes on them, hence his reference to what type of film to buy. do a look up on em. that was in the post you so kindly referenced. I think you overdramatized things a bit didn't you. Possibly a little paranoid. Perhaps he is a paparozzi photographer and you are his subject.

Same reason they buy a Ford Exhibitionist to sit in crosstown traffic taking
Grannie to the pool hall.

3658. CB Radio Enthusiasts Club in Northern Illinois?

Newsgroup: rec.radio.cb
Date: 2001-07-04 07:39:29 UTC
From: "Gregory M. Gauthier" <gmgauth@attglobal.net>
Message-ID: <3b42cad1_3@news1.prserv.net>
Source record: 87847

Folks,

I know this isn't exactly politically correct to ask around here, but I was wondering if anyone was aware of a decent (i.e. LEGAL) CB Radio club in the Northern Illinois area.

I love the HAM thing (I'm taking my technician-class test next Monday!), but I also love my good 'ol Cobra 40-channel (well, OK, it does have SSB). In fact, my Dad and I still share an original 1978/79 CB callsign we obtained from the FCC when he purchased a Cobra base unit at his first house: KBOR5901.

So, I thought it would be great if there were a CB group around here that functioned like a lot of ham groups - somewhere to swap hardware, test antenna setups, do some LOCAL rag-chewing, and maybe even setup a REACT team, or a CB weather-net in the Northern Illinois area.

Is there something like this out there, or am I just dreaming too big again?

You should really set the RTC on your computer.

The problem is that you are just playing stupid (which really isn't hard to do since it comes naturally for you). But all that doesn't matter because I was there at BOTH 5am AND 10am!!! Not once did a black F-350 show up! Hell, I was sitting right in the middle of the parking lot eating a hamburger, but alas, no black F-350!

ONCE AGAIN you are full of shit!!!!!!!!!!

I'm going fishing again today, so I am going to give you the opportunity to act like a man (at least you can -act- like a man, can't you?) You can call me Gilligan to my face, tell me all about how I am a child molester, beat me "like a redheaded stepchild", and then tell me, "go back to your 100 milliwatt walkie talkie, you worthless piece of shit". Sure, moped, I'll give you another chance. There's a McDonalds right off 6 in Rocky River. Noon. Be there or be a pussy for the third time.

I Truely do not agree with the idea you have gathered from I assume some of the previous posts. I know we all have in the past become quiet angry with eachother at some point on this group. I myself was attacked becouse I talked about some boxes being better than others, it seemed to really piss off those who were into the sale and distribution of lesser named boxen. I think back and I know I should have never said anything about it . Though I was proved right, I know there was alot of Animosity towards me becouse of that situation. Time has passed and I have made a decison while I am here I will not promote any amplifier type over another. What I choose to use as my personal gear will be my own buisness. Some already know what it will be, That makes no difference. The Point is that I have not come here to make trouble. The Keydownclown tagging is kind of funny to me really. Labels have never solved anything. Those that label wish in there own mind to hold themselves higher than others. Which would be a low self esteem issue. I am just a guy who has a passion for radio and electronics in general. I am not greater nor worse than anyone. I am just a guy. I know the testostorone gets flowing and we all get goofy and sometimes say something you wish you never said. We all learn from these situations. I have never seen any part of radio operation illegal unless it was disruptive or someone is thrown into harms way. People doing fake distress signals should be shot in the head for being unamerican. There stupidity is what has diseased our great country. There is a book you may want to read called " The Ugly American". Determined by the eyes of other nations we have very little respect for eachother or anyone else. That is a disease that needs to be taken care of. We can only take care of that situation on a person to person basis. I am not a Hipy looking for peace and tranquillity for everyone. I will do my part to have mine. It is everyones else decision to make what good they can from this life we have. Some patience usually does a person good. I see alot of other people attacking eachother to make eachother soundboards. Something in there life is not like they would like. They proceed to attack eachother behind close doors and under false names. Seems to me to be destructive to ones behaviors in life. I have noticed that maybe some are taking this home or to bed with them. If you are angry and you are reading this post if I was you I would just let go. This is not the only thing in life you can do. Go workout or take your special someone someplace anyplace. This is only a small thing in your life. I am not attacking any perticular person and I will not do so. Live a little take a stroll do something that makes you happy as long as youa re not committing a crime against someone. I could image atleast one person here has murdered someone.or did some other terrible act. Please not those things. Some may laugh at that but never underestimate anyway. Learned that I lived next to a serial killer about 7 years ago I guess. That changed my attitude about people and social interaction. So can we all play nice ? HEH . I doubt it really so I have an idea. I will setup a get together. If you want to kick each others ass so be it. I think boxing with gloves on in a ring man to man would do some of you some good. All this behind close doors is just bullshit and adds to the ever

gracious supply of cannon fodder. No guns no knives nothing. If a person is older or has medical problems I really do not think they would be allowed to box. I just want to get everyone together.
Maybe some of this grap will die down. I do not condone physical violence. If you have a grudge against eachother and want to knock eachother around I am game. You will wear gloves. If it is ovious you are just picking on someone then of course this is not going to happen. Send your flames to ICECOLDNYC@aol.com HAH. I am sure that would go over very well LOL. I am sure ICE will put me in the headlock for that HEH. Hope everyone can cut the flaming and useless fighting down just a tad. Atleast
it would be nice.

Your asprin.. Painkiller.

3663. Re: why modify rigs for more power?

Newsgroup: rec.radio.cb
Date: 2001-07-04 09:59:45 UTC
From: Jay in the Mojave <jay123a@qnet.com>
Message-ID: <3B42E911.52743B09@qnet.com>
Source record: 87885

Hello Jason: Its human nature mixed with not knowing whats really happening.

Agreed, most all CB Radio's are mass produced, and the designers didn't allow for any room for extra power mods. Such as modifying the radio for more output power on AM, due to the fact that the modulator doesn't have enough audio power to modulate the radio at the stock 3 to 4 watt output to 100% modulation.

Even in the older tube radios when the series resistor in the plate circuit was "strapped" (slang CB term, meaning to bypass or reduce) the radios had a higher output power, but experienced a lower level of audio, because the audio circuit could not supply the extra audio power to make the 100% modulation.

I wish I had a dime for every radio that I have removed a jumper so that the radio would sound better.

But on SSB you could squeeze a few extra watts, and that would get more out of your linear amplifier.

Now just the other day I heard a load radio on the air the kid said he ordered two of the audio output IC's and two of the audio transformers for a Cobra 29 so that he could get more audio for AM, that'll work!

The old Johnson Viking Rangers (ham transmitters) had higher output tubes in a class C plate modulated circuit that sounded great, like broadcast quality audio. Even when using a 2 KW linear Amplifier. Got to shoot a lot of skip too!

Maybe like Homer Simpson who punched holes in the hood of his car to go faster, ah? Until he bought a new hood and put on a bigger carburettor and headers.

Jay in the Mojave, only 109 degree's, F, yesterday, and it rained.

You do not want to buy gell cell you want agm..absorbtion glass mat . I would reccomend concorde for you. There is another brand but you have to be hardcore plus I rather keep that to myself . Though a good replacement though there 8D type
do 31 or so amps at 12 volts for 8 hours constant easily so you are looking at pulling 200 amp load on a 12 volt battery for a about 30 minutes I think it would overheat though hehe. .The Less load you put on each battery the more effecient it gives out electricity I do not know if they make 8 volts but they do make 12 and 6. I guess you are going to make a 16 volt battery system not a bad idea. For regular boxen that would be ok. Another thing about concorde there batteries have a 10 year warrenty and will last atleast 15 years. Concorde AGM type batteries Are MIL Spec becouse they are basically nongasous when overcharged

Hi, Matt. What you are experiencing is very common for a handheld CB unit.

I doubt that the nearby broadcasting stations are affecting your range, unless they are overloading your receiver. (Check to see if you hear them with the squelch open). Broadcasting frequencies are elsewhere in the spectrum and generally do not cause a problem for CB.

The high rise across the street might block signals in that direction. But the "shadow" effect should be narrow.

The "real" culprit is the antenna that comes with handheld CB radios. Technically, the antenna for CB should be 5.5 meters long. Obviously, yours is a compromise in order to keep the radio "portable". If your CB transciever has an antenna connector, consider installing a longer antenna. Even a car antenna (with base loading coil) would be an improvement if you mount it on a metallic surface.

>Is there something like this out there, or am I just dreaming too big again?

Hi Gregory,

There's absolutely nothing wrong with "dreaming big." My advise to you is to use a good search engine (I prefer Google) and join an AR club when you get your ticket. Just be sure and check out the club first to see how the attitudes toward a Tech who is also a "CB enthusiasts." You really shouldn't have too much of a problem as there are "relatively" few troublemakers, but it's those few that spoil the rep of many. Once you're past that, I'll bet you'll find some fellow hams whose interest in radio were born from CB. They'll likely be able to direct you to a good club or hey if enough are interested, you could take the bull by the horns and start one. Most hams will like the idea of a "legal" 11 meter club. Good luck to you and have a happy Independence Day.

Tuck all your little fingers into a fist. Now, I showed up at the
place you picked at 5am (the time that I picked after you told me to
pick a time). No black F-350, so that was once (extend one finger
-now-). I showed up at the same place at 10am, the time you picked. No
black F-350, so that was twice (extend another finger -now-). So how
many fingers do you count? Did you flunk pre-school, too?

> You are just proving that you are just a windbag

>ps; you pick the strangest "fishing" times dipshit.

Well shit, I don't know how to make this any easier for your punk ass.
I showed up at both times, but you didn't. I have even given you a
time and place today just to offer another opportunity and to

eliminate any possible confusion you have about the time. I am sitting here in your own home town and you have yet another chance to talk your shit to my face, but you don't seem to be willing at all. What's the problem, moped? Have I not been accomodating enough? Am I making this too difficult? All you got to do is hop in your truck and drive for a few minutes. I'm sure your guests will wait, assuming this cookout is at noon. In fact, I'll be here till about 5pm, so why don't you pick the time? I already picked the place, and I can get there in five minutes. If you can't find McDonald's I remember a Post Office, a boat shop and a Taco Bell nearby. So what's the problem? Don't you want to talk your shit to my face? Wasn't it you that said:

>Tuesday at 10 am in Tallmadge(summit racing).Frank has threatened me
>enough. If he has any intention of dealing with me "eye to eye" in Ohio,
>he'll be there(I will anyway cuz I need some head gaskets for a 440).If'n
>he's not there(as expected),he best squat with his hat in his hand..the
>next time he adresses me. Update tomorrow at this time..;)

So come on, moped. Drop all the lame excuses, show up and get it over with. This is probably going to be your last chance because I am heading back to Spokane tomorrow, so whaddya say? Stop on by and see what happens when you shovel your shit in my face. If you want to change the time or location then you need to respond quickly, my laptop is getting wet and I am about to pack it away. Otherwise I'll be under the golden arches at noon looking for your black F-350.

3671. Re: why modify rigs for more power?

Newsgroup: rec.radio.cb
Date: 2001-07-04 12:44:06 UTC
From: kc2hmn@cs.com

Source record: 87859

I think it's mainly psychological. "I'm wringing every last drop of power from my rig." I also believe thet you must double your power to have any discernable difference seen by the receiving station. So while a 4 to 7 watt increase might net you a small gain, the law of diminishing returns dictates that your next jump to 16 watts, then 32 watts, then 64 watts, and so on is certainly not worth it. Just my $0.02.

SSB appears a bit different though, perhaps the efficiency if SSB over AM? I've heard two stations from approx the same distance away, one running 12 watts, the other 25 watts, and I "saw" little difference on the S meter.

Source record: 87880

Hello Jason: Its human nature mixed with not knowing whats really happening.

Agreed, most all CB Radio's are mass produced, and the designers didn't allow for any room for extra power mods. Such as modifying the radio for more output power on AM, due to the fact that the modulator doesn't have enough audio power to modulate the radio at the stock 3 to 4 watt output to 100% modulation.

Even in the older tube radios when the series resistor in the plate circuit was "strapped" (slang CB term, meaning to bypass or reduce) the radios had a higher output power, but experienced a lower level of audio, because the audio circuit could not supply the extra audio power to make the 100% modulation.

I wish I had a dime for every radio that I have removed a jumper so that the radio would sound better.

But on SSB you could squeeze a few extra watts, and that would get more out of your linear amplifier.

Now just the other day I heard a load radio on the air the kid said he ordered two of the audio output IC's and two of the audio transformers for a Cobra 29 so that he could get more audio for AM, that'll work!

The old Johnson Viking Rangers (ham transmitters) had higher output tubes in a class C plate modulated circuit that sounded great, like broadcast quality audio. Even when using a 2 KW linear Amplifier. Got to shoot a lot of skip too!

Maybe like Homer Simpson who punched holes in the hood of his car to go faster, ah? Until he bought a new hood and put on a bigger carburettor and headers.

Jay in the Mojave, only 109 degree's, F, yesterday, and it rained.

If you had bought your equipment from a local dealer this would never happen. The local guy might charge a bit more, but how much did it cost you to ship the original radio, to ship it back, to be inconvenienced, etc? How much honest advice did the guy on the phone at Copper give you? The mail order cb business is notoriously dishonest and illequipped to handle problems. Everyone here should take a hint and avoid them. If they don't sell, they will either go away or change their ways.

Another forge, for sure, since you NEVER make threats. You know, you
are really turning out to be one big disappointment, even for a
yellow-bellied, loud-mouthed, shit-talking liar. I don't think there
is one real man in this newsgroup that would stand in your place and
not take the opportunity that awaits you just a few minutes away.
There can be only one explanation for your lack of balls.....

Point certainly conceded, Tim. I noticed that I didn't actually finish my thought. (Age setting in. :-)) On SSB, I heard the same two stations while mobile and when neither showed any meter movement, the 25 watt rig's audio was still audible. Thanks.

Tim, do you think these amps have passed any type of certification by the FCC to be sold or built for export Only.? What certification has an illegal company as Xforce or Davemade or Noname or Texas Star, gotten to allow them to export amps? You are talking/comparing legal legit companies selling these amps not some basement dwellars building CB boxes.

I never said commercial amp manufacturers couldn't sell them we are talking about davemade, xforces, texas star etc. A legal ham amp can be used by hams all over the world, a cber in France though cannot use a xforce 5 pill. Nor can you export illegal items. A henry or qrotec are not illegal they are no different than a Eto, alpha henry etc all legal ham amps Note the word cb is not used. Tim you can search all you want and try to dig something up but The excuse that Exportsrus and the rest are exporting these amps is a crock of shit . It is illegal to export illegal items. Cb amps are illegal items on the selling end (usa) and the country they are being sold to. Ham amps are not they are type Accepted/certified and meet the GOV/FCC requirements for an amp of this type, of course we are not talking about a single amp built by a ham

Here's one site that will help you identify the chip:
http://www.xs4all.nl/~ganswijk/chipdir/index.htm
He has a message board and chat area. Also, several search engine to find
your chip, manufacturer and availability.
I'm thinking that the issue might be having the chip shipped to Poland.
But, if that radio was available in Poland it seems you should also be able
to obtain the chip.
Another word of advice is to obtain a chip socket for your chip. If you
only manage to find one chip, it would be a real bummer to burn it up with a
soldering iron.

Good luck

On the specs page they advertise 160 through 10 meters, 3500 watts PEP with 90 watt drive (1 pair 4CX1600B).
Oooooo... it also requires 30 A @ 200/240 VAC. I think the power company's watt-hour meter would need some tweaking, too.
This unit was definitely not designed with the US market in mind.

I think the rule of thumb here is 1 s unit every time you double your power (or is it 2 or 3 dB?).
So, you managed to squeak 7 watts out of your radio. No one will notice, it's hard on the radio, pushing the design limits, etc....
The SUV thought hits the nail on the head but, I prefer the analogy of the guy with the 72 Plymouth Satellite with the 440, dual quads, cherry bombs, etc.... going down to get a gallon of gas for his lawn mower.

I agree, not a good reason. An amp will reach the point of saturation. The power will actually decrease as more input power is applied. If an amp is designed for 4 watts input, I've found that's about the point where this happens.
Results may vary.

Thanks for the info Pain. I checked out the site but didn't see any 8 or 6 volt batteries listed. I'll keep the AGM type in mind while searching for these voltages instead of the Gel Cell type. It seems most folks are running cap bank systems now instead of the standard batteries when it comes to 16 volts and above. I didn't want to go that route but didn't really want to go with the standard acid type battery either. Looks like the wet acid type is what I may have to end up with as the AGM and Gel Cell are super hard to find in the 8 volt size.

Unless you don't have the alternator power
any type battery should be fine. Unless you like to talk with the car off.

If you are serious about range, forget a walkie talkie. Buy a mobile radio and a good antenna instead. Forget cellular look-a-likes and anything really small. A CB wave is 11 meters long. You cannot get out with a short antenna.

Time to load the bicycle on the back of the Jeep. I park over a mile away from the fireworks. I can be back at my vehicle and gone before the major traffic jam builds up from 20,000 people trying to leave at the same time.

Don't want to take the time to explain the details at the moment.
Suffice it to say, go with ham radio if you want to communicate with lots of people over a distance, or even if you want reliable communications down the block, to the next city, or next state. I'd suggest start with a RAdio Shack and see if they can point you to a local ham club. Look in the phone book yellow pages for Amateur Radio dealers. Look on the internet for local activity.

Short wave listening can be fun too, but it's a receive only thing, so if you want to communicate too, go with ham radio.

CB radio is noisy, crowded, less range, and somewhat less polite than ham radio, although it is cheaper.

If all you want to do is talk to your girlfriend a 1/4 mile away, or something like that, buy a pair of "Family Radio" Handy Talkies.

For what it is worth (not much, admittedly), when I was on Guam I was tuning around on 10 meters and set the rig up for maximum output on the Henry 2K linear. The point that this occured was where the Collins was outputting around 15 watts. Loading the Collins for normal output into the antenna resulted in around 800 watts when the Henry was switched in - tuning it into the the Henry for maximum output revealed only about 15 watts out of the Collins when switched into the antenna (this may WELL be a factor of tuning the Collins to match the input impedance of the Henry - not likely 50 ohms). At any rate, I called CQ running 15 watts to the TH6-DX, up 102 feet over salt water and back came a WA2 with a familiar sounding call. Yep, he was from Webster, NY - a local phone call to my parents in Pittsford. When asked for a patch, he said he'd try if it was a local call as my signal was weak. I switched in the Henry - which now indicated 1200 watts output on voice peaks. Knocked the speaker off his bench.

Scott, he might try FRS if he doesn't need a lot of range. You are absolutely correct about the antenna. Don't forget to include the fact that the ground (your hand) is also very inefficient at 27 MHz. An interesting question comes to mind - I wonder how the range of two FRS units would compare with the range of two handheld 27 MHz units? My guess is they might be similar say at 3:00 AM when there is no noise on 27 MHz, otherwise the FRS units may well give you better range. My guess - anyone have any figures?

Hello everybody and thanks for reading this.

I'm a brand new beginner... never before played with CB or HAM radio and don't know anything about it, but I'm intrigued. I want to get something that will allow me to talk to people... so... I have a couple of questions.

1) What exactly is the difference between CB radio, HAM radio, SW radio, and even walkie-talkies. Is it just the range?

2) How does it work if you have a CB radio. Do you just scan across the channels and listen to see if anybody's out there? And if you hear people, just start talking and they will hear you?

3) Say I have a hand-held 40 channel thing and my girlfriend has one as well. Does it matter if they're the same make or model or anything? or do we just agree to communicate on the same channel (ex. #18). Also, do we just leave them on all the time, or would there be a "call" button.

4) For those radios which require licences, such as Short Wave... how do you get one? What is the cost, what is the procedure?

5) What is the average range of a hand-held two-way radio (walkie talkie) or hand held CB radio?

I know these are probably really silly questions, but ANY advice would be wonderful! Thanks in advance!

Nick

I had a customer bring one of these radios to me a few years back while I was still in TN. He brought me his radio the day he got it for some fine tuning. The radio was shipped with a rusted chassis and some piss-poor freehand soldering. As some of you will remember, we had Copper's VP as a poster to this group a while back and I e-mailed him with this problem. He told me a new unit was on its way and to send back the one I had because he couldn't believe it. The new radio was in my hands the very next day and all was well. This is the ONLY good story I can tell about Copper and their service and that is because I bypassed customer service to get this taken care of quickly. As a rule, I just plain wouldn't buy a damned thing from them or their "backdoor" H&Y.

I see you've sent this to the UK, USA and Australia. What country are you in? You may get confusing information, as CB radio has different operating standards in different countries.

correct
Australia and New Zealand have a 40 channel 477MHz UHF CB band with
repeater access on 8 channels

and some Ham bands are full of boring stuck up old codgers and have
almost as many ratbags as some CB repeaters

Source record: 87723

Oh, this radio is far from a piece of junk.
The small amount of research I did revealed that it is a single sideband rig containing the very well known uPD858 (NEC) chip. I understand that this type of radio (similar design as the Cobra 138XLR/139XLR) is very broadbanded and capable of supporting 200+ channels.
The chip is 10 bit binary. Pins 13 to 22 control this (p0 to p9, respectively).
N-codes are 91 for channel 1 and 135 for channel 40.

*****ATTENTION *****
Modifying a radio in such a fashion (as to operate below 26.965 or above 27.405) would be a blatant disregard for FCC rules and would probably yield a large monetary fine if one were caught.

Operation above 28 MHz requires an amateur radio license. Operating voice between 28 and 28.3 MHz will attract a large amount of attention (due to the fact this portion of the band is reserved for CW operation only) from local hams who have nothing to do but make sure you get busted for it. If you have a couple of grand burning a hole this shouldn't bother you, but if that were the case you wouldn't be dicking around with a 25 year old radio.

If you feel you must operate above 27.405 MHz, stay well below 28 MHz just to keep your tits out of the wringer.
Last but not least: If you butch your radio and it will no longer work, it's your own damn fault.
***** YOU HAVE BEEN WARNED *****

Now that you folks are almost done bickering about this topic lets get on to the real story here. What "should" actually happen when a radio goes in for a tune is the audio circuit is opened up to let it "breathe" a little better. This is done along with DROPPING the output to 1.5 to 2.5 watts to allow more swing and to extend final life rather than raising it as you stated. While this may sound silly to drop the output, the lowered deadkey lets you get to the same maximum drive from a lower starting place thus increasing audio output.
This also facilitates in the driving of an amp as most only need 2 watts input to drive them. That's as far as I will go into it on the NG for now.

3738. Bit O'Humor

Newsgroup: rec.radio.cb
Date: 2001-07-05 01:27:37 UTC
From: "Scott (Unit 69)" <upplus@hotmail.com>
Message-ID: <3B43C289.5C747C4@hotmail.com>
Source record: 87724

A police officer pulls a guy over for speeding and has the following exchange:

Officer: May I see your driver's license?
Driver: I don't have one. I had it suspended when I got my 5th DUI.

Officer: May I see the owner's card for this vehicle?
Driver: It's not my car. I stole it.

Officer: The car is stolen?
Driver: That's right. But come to think of it, I think I saw the owner's card in the glove box
when I was putting my gun in there.

Officer: There's a gun in the glove box?
Driver: Yes sir. That's where I put it after I shot and killed the woman who owns this car and
stuffed her in the trunk.

Officer: There's a BODY in the TRUNK?!?!?
Driver: Yes, sir.

Hearing this, the officer immediately called his captain. The car was quickly surrounded by police, and the captain approached
the driver to handle the tense situation:
Captain: Sir, can I see your license?
Driver: Sure. Here it is.
It was valid.

Captain: Who's car is this?
Driver: It's mine, officer. Here's the owner's card.
The driver owned the car.

Captain: Could you slowly open your glove box so I can see if there's a gun in it?
Driver: Yes, sir, but there's no gun in it.
Sure enough, there was nothing in the glove box.

Captain: Would you mind opening your trunk? I was told you said there's a body in it.
Driver: No problem.
Trunk is opened; no body.

Captain: I don't understand it. The officer who stopped you said you told him you didn't have a
license, stole the car, had a gun
in the glovebox, and that there was a dead body in the trunk.

Driver: Yeah, I'll bet that liar told you I was speeding, too...

> can enlighten me as to why ppl want the extra heat in their rigs

First of all, you don't know what you're talking about.
If it was like you describe, people *wouldn't* do it.
Secondly, it's not the extra couple of average watts
that makes the difference--it's the extra audio (aka
peak wattage--which doubles or triples) that
comes from defeating the modulation limiter that
helps. Thirdly, much of the special tuning that is
done is to maximize the performance when using
small, easily overdriven amplifiers. In those cases
the radio actually runs cooler than it did when it
was stock. If you were more experienced you'd
know these things first hand.

No problem. I am only really familiar with the CB and public access radio in the UK and Australia, and CB is different there, so I'll leave the detailed descriptions to someone from the US or Canada.

But what I can say, is that amateur radio (what I think you mean by shortwave) is a technical hobby which requires the passing of exams on technical matters and operation procedures which takes a fair amount of time and effort. I am a ham and think its a great hobby and would encourage anyone to become interested, but it sounds like what you need is either Citizens band radio, the low powered family radio service (FRS) or the higher powered general purpose mobile radio (GMRS). These require no examinations. Do a search on the web for CB (ensuring it is a Canadian or American site), FRS and GMRS for more details.

I need a handheld for my motorcycle, a bigger unit will not work. I have a pair of two way radios to communicate with my girlfriend when we ride, but am looking for the CB when I ride solo. I was thinking of a handheld and a 5' whip antenna, unless I can get a good distance without it.

Not sure, but I believe it is six dB per S unit (S meters are generally accurate only with the antenna and radio both unplugged). That would be an increase of four times in power. It's kinda like a computer - is it worth it to spend the money overclocking a pc by 30% (assuming it would even take it! - I assume we are not talking changing the final in the radio nor the CPU in the computer). Doubling the clock in a computer does not double its' performance. Same way with the radio - doubling the power will generally not be noticed. It will in those rare instances where your signal is right on the edge of being unreadable, but it won't be a big difference (if it is real difficult to copy at 4 watts, it will still be difficult at 8). Also, a question comes to mind as to reliability. Increasing the clock in the pc can shorten its' life considerable; in a radio, I would be wary of increasing the power a lot using AM or FM - the constant carrier will cause a lot more heat. SSB may well be far more suitable for that kind of stuff, but will leave that to the folk who have actually done this and can give a 'real-life experience' opinion.

I don't know where he found his source but several CB to 6m convertion how-to's can be found at this address:

http://www.6mt.com/6tech.htm

Some of them are a bit more that simple cut a wire, or circuit trace, or change a crystal mod.

If your thinking about getting a Ham Tech no-code ticket, easy to do, then modifing one on the CB radios listed on the above web page will put you on the air real cheap.

Well once you know the isp sometimes you can pull information from the snmp service on the Ras server if it is a dialup and grab phone numbers and addresses.
or on cable if you ahve the " host name" which is there account number like @home s is like c127836-a ok. c is basically nothing ..127836 is the account number -a just means 1st ip associated with account. etc. Once you ahve the account number if you know a person who works for @home they can pull the account number and all its information. I can only access 28 states over cox as of right now. Though there are many other ways you can get information those are only a few. Getting my CiSSP (Certified Information Systems Security Professional) Cert . I was told it would be a good move for me. Anyway just a few ideas for you to think about. Peace

Today we celebrate our right to overthrow the government.

There is no pussyfooting around this fact. It is the central meaning of Independence Day.

Today's firecrackers are reminders of the bloody war we were willing to fight against the British to win freedom. Bang.

We can try to rename today's holiday the more innocuous "Fourth of July." We can outlaw firecrackers on the grounds of nuisance and fire hazard and you'll-put-somebody's-eye-out.
But so far nobody has been able to rewrite the Declaration of Independence itself, and the words of that document are crystal clear. Today is a spiritual, passionate, angry, violent holiday for a modern society that is squeamish about every one of those adjectives.

If you get a chance today, you should read the actual words of the Declaration. Read the whole thing. It's even better out loud. Imagine you are really fed up while you're reading it. When you get to the list of abuses by King George III, you will get angrier and angrier. I still do.

We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable Rights, that among these are Life, Liberty and the pursuit of Happiness.
Endowed by their Creator! Were the Framers deftly sidestepping the word "God," or in their day did they simply assume that one word was synonymous with the other? Either way is fine -- the point is that we have inherent rights that can never be taken away.

That to secure these rights, Governments are instituted among Men, deriving their just powers from the consent of the governed.
There's the Big Idea. Government gets its authority from the consent of the people. It is one of the most important political things anybody ever said, except maybe for the next sentence ...
That whenever any Form of Government becomes destructive of these ends, it is the Right of the People to alter or to abolish it, and to institute new Government...

And that is the gist of it. The people give the government its power. If the government becomes tyrannical, the people have the right to cast it off.
This does not mean that the Framers intended us to start a revolution every time we got ticked off. It does not bestow any moral authority on kooks and extremists. In fact, Jefferson and his editors stressed just the opposite: government should not be changed for "light and transient

causes."

But when a long train of abuses and usurpations, pursuing invariably the same Object evinces a design to reduce them under absolute Despotism, it is their right, it is their duty, to throw off such Government, and to provide new Guards for their future security.
Legally speaking, do you know how much weight the Declaration of Independence carries today? None. Zippo. The Constitution is the sole basis of our government. Yet the Constitution would not have been possible without the Declaration -- it is the "new Guard."

An opinion survey this week said 66 percent of us do not believe Americans would be as willing to call for a revolution today as they were 225 years ago.

But are we really so puny? We have glorified the Revolution over the past two and a quarter centuries. The truth is it was a controversial and divisive time. A lot of colonists wanted the King to win. They were willing to live under tyranny for a little extra security.

Do you think they magically grew a better crop of human beings in the 1700s? Or did Americans of that era rise to the occasion, just as they did in a Civil War, in a terrible Depression, in two 20th-century wars against global evil?

In our modern life we are fat and happy and safe and selfish. The question for today is whether in that comfort and selfishness, an essential American idea has been extinguished, or is just sleeping.

An outstanding piece written by Tampa Bay's own Howard Troxler in today's local. Sparky knows the paper.

Audio, aka peak wattage...defeating the limiter. And Amplitude Modulation has something to do with changing the amplitude (which, in fact, it does not).

1. There is no way to get more than 1/2 of carrier power into audio sidebands. So if we have a 4 watt carrier, you will get 6 average watts of usefulness and 16 peak watts. You may get more than this on the meter but it will be in spurious crap. Please do not try to sell me a 'swing kit', a variation on 1940 Taylor modulation; it is nothing more than a stunt to fake the receiver AGC.

2. Defeating the mod limiter defeats about half the 'talk power' because it lowers the average-to-peak audio ratio. The voice usually has about about a 1:4 ratio so if you correctly set the rig not to exceed 100% modulation, your average will be about 25%. By use of compression but more normally in CB bouncing it off the limiter you can raise this to the 40-50% range without too seriously degrading audio. This is standard broadcast practice anymore. The limiter is not put there to limit your manhood to some arbitrary standard; it is there both for 'talk power' and to keep the crap level down.

3. Amplitude Modulation is a mixing process; the carrier carries nothing, nada, zilch. To properly run a mixer, one signal has to be 2/3 of the total output of the mixer -- period, end of story. When you arrange to violate that rule, the mixer (be it the final of a transmitter or the first mixer of a receiver) does strange and silly things like generate multiple sidebands outside the passband of a receiver and therefore spurious or react stupidly when the sum of the signals is less than zero generating the familiar

buckshot across a few channels and taking out the local airport.

4. There are any number of better ways to match power to an amp than what you describe.

Most of what you describe will cause a unit to win meter-reading contests and be out talked by a rig right out of the Walmart box.

You could search Industry Canada's web page but it is less helpful than calling them. You can get a short wave receiver to listen to foreign broadcasts if you find that sort of thing interesting. They can actually get pretty expensive. CB using a hand held and the built in antenna might get you out 2 km but not much more. With a real antenna quite a bit more but it depends upon topography and the local noise level caused by other users on the frequency. Amateur is broken down into three classes, one of which requires only a simple written exam and permits transmissions on VHF and up. Again, check with IC or Radio Amateurs Canada for more information.

Nick,

If you're GENUINELY interested, I would suggest you take a look at the list of websites I am attaching below, for additional information. In the meantime, here's my attempt to answer your questions:

1) What exactly is the difference between CB radio, HAM radio, SW radio and even walkie-talkies. Is it just the range?

Besides frequency range, and mode of operation (AM, FM, SSB, CW, etc...), the difference between these is their FCC designated class of service. For instance, "HAM" (or Amateur Radio) operators belong to the Amateur "service" as defined in FCC regulations Title 47, Part 97. CB Radio, and the various new "Personal" Radio services such as FRS, are defined in Title 47, Part 95. The FCC defines specific frequency ranges, maximum power limitations, and operational modes for each of these services, based on the *intended* use of those frequencies. A "map" of these intended uses - known as a "band plan" - is available from both the FCC (www.fcc.gov), and various support organizations like the ARRL (Amateur Radio Relay League - www.arrl.org).

NOTE: Despite my libertarian leanings, I must stress: the FCC, and the regulations it enforces, are derived from - and exist as - the result of international treaty, and that is why we need to respect them - because the actions we take on the air could potentially effect more than just our next-door neighbors.

2) How does it work if you have a CB radio. Do you just scan across the channels and listen to see if anybody's out there? And if you hear people, just start talking and they will hear you?

For the most part, with the CB Radio service, this is exactly how it works. Since about 1983 (or so - I can't remember), the FCC has significantly relaxed the regulations for CB operation. It is intended to be used as a short-distance, informal, short-duration voice communications method, so pretty much anything goes.

HOWEVER, there are still some restrictions defined in FCC rules Part 97 for CB communications. For instance, complete conversations are *supposed* to take no more than 5 minutes, during which: profanity is not allowed; intentional interference with other CB operators is not allowed; "broadcasting" (i.e. playing music all afternoon on channel 14) is not allowed; advertising and solicitation is not allowed; and transmitting political campaign ads is not allowed. Oh, one last restriction that seems to be generating the most controversy these days: You're not allowed to "skip shoot", or "DX" stations more than 155.3 miles from your location.

In addition to this, there is also an etiquette for communicating with other CB operators intended to promote courteousness. When you decide to communicate with those you know, you should seek a channel that seems "quiet". In otherwords, one that is not in use. When you are attempting to communicate with an operator who is unfamiliar with you, you should wait for a pause in his conversation, and then key up and announce "BREAK, CHANNEL XX". Once the other party has acknowledged your 'break', you should find some consistent way of identifying your station. Since the FCC no longer issues callsigns for CB, your best bet is first name, and general location (like city name). Although the FCC does also suggest concocting your own callsign as such: "K prefix followed by operator initials and residence zip code", most folks find this too geeky, and simply use their name.

3) Say I have a hand-held 40 channel thing and my girlfriend has one as well. Does it matter if they're the same make or model or anything? or do we just agree to communicate on the same channel (ex. #18). Also, do we just leave them on all the time, or would there be a "call" button.

For all of the available "personal" two-way communications bands (CB, FRS, etc.), the exact make and model of your transceiver does not necessarily matter, because when they are manufactured, their design is certified for the given service band. Just be sure that if you both want to communicate on the CB band, that you both own *CB* radios, and the same is true for FRS, or "Family" radios.

As for leaving them on all the time: If you want to communicate, they must be turned on and actively "listening" to the designated channel, or frequency you two agree upon. This is why they invented "squelch" - a little knob on the radio that suppresses static and white noise, so that the only thing you hear is the voice you're waiting for!

Many folks I know who are into CB, will find a station that seems most quiet in their area, and then tell all their "buddies" that is the station they "monitor" most often. Then, whenever they want to meet "on the air", all someone needs to do is key up and announce: "BREAK, CHANNEL XX, STATION XX CALLING STATION YY. YOU OUT THERE, BOB?"

4) For those radios which require licenses, such as Short Wave... how do you get one? What is the cost, what is the procedure?

Licensing depends on the service. If you're after an Amateur Radio operator's license, there are actually (as of April 2000), three levels of licensing. Each level authorizes you to operate on different frequency ranges, and in different modes. The first level license is called the "Technician Class" license. In short, you must take a 35 question exam administered by a "Volunteer Examiner", from a pool of questions derived from the FCC regulations for the Amateur service, and some basic electrical and radio theory. If you answer 27 out of 35 of those questions correctly, then you are a licensed "HAM" as soon as the FCC issues you your ticket! My recommendation is to check out the ARRL website for more details. In addition, your local Radio Shack has a set of small, but AWESOME books by Gordon West, which are an excellent overview of the Amateur service, as well as test preparation aids. I'll post the URL's below for all of this.

5) What is the average range of a hand-held two-way radio (walkie talkie) or hand held CB radio?

Depends on the radio, the band, and atmospheric conditions.

The FRS ("Family") radios are designed to function between 462 and 467 megahertz, at 1/2 watt output maximum. The packaging will tell you this is good for (depending on the manufacturer) between 2 and 5 miles range. However, having tested several brands (from cheap to expensive), I've found that most are only good for between 1/2 mile and 1.5 miles. This is mostly due to physical obstructions (UHF/FM communications are known as "line-of-sight, so physical obstructions can seriously limit distance), and significant transmitted signal loss because the antenna is usually some crummy little rubber nub, sticking out of the top of the unit.

CB Radios, on the other hand, are designed primarily for AM carrier wave operation at 4 watts on the 11 meter band, as well as SSB on the upper channels (35-40) at a maximum of 12 watts (Peak Envelope Power). In addition, most CB radios are designed to accept standard 50 ohm antenna feeds, allowing the operator to erect whatever antenna system best suits the location, and the radio. To me, this makes CB a far more robust, and desirable (license-free) service to operate on. However, 11 meters can be a fickle bandwidth due to atmospheric conditions, propagation characteristics of 11 meter transmissions, and the proliferation of illegally amplified, and "freeband" operators. So, some days you won't be able to communicate for more than a few thousand yards before your signal (or your friend's signal) is lost in the SOUND STORM of what Hams like to call "QRM". Yet, there will be other days when you'll get as far as 8 to 10 miles, and late at night, you'll hear the "skip-shooters" just barely popping out of the light hiss, chatting with each other all across the country.

Right on, Twist.
As we are reminded by the movie "The Patriot", the men who fought the American Revolution put it all on the line. Not just their lives, but their families, lives, their property.... everything.
I believe it's true; we are too comfortable today for any kind of revolution to take place.
Who among us today would forfeit our homes, families or lives for the simple liberty which was fought for 225 years ago?
For all of our security, look how much liberty we have sacrificed.
May God save us from ourselves.

Folks

According to the Gordon West books, the legal output power limit for Amateurs on HF bands is 1500w, except where otherwise defined by the band-plan. However, I did not see anything about what limit a manufacturer was required to build into his equipment (of course, the books are not directed at manufacturers).

What I'm wondering is, if I'm a HAM, and I purchase an Amp rated for 3kw, and I'm careful to never operate it at more than the 1500w allowable maximum, is simply OWNING the equipment a violation? What is the regulation on this?

Just curious.

well to be honest i ran cb before for a while before getting my ham ticket.. but it always amazes me to see ppl asking how can i modify my cb so i can get a output puwer of 6 watts..... i'm not particularily asking how it is done but more like why?? i mean if you take a amateur radio hobbyist.. he is not going to go out and buy a kenwood TS-440 and take his 100 watt variable output and try to peak it out to 102 watts.. there is just no sense in doing itand as far as i can see on the backing off on the power output from 4 watts to 2 or 1.5 watts but opening up the modulation circuit... well all i can get out of that is "what did you say???? i'm sorry i can't understand you.. you're OVER modulated!" i mean it does not make a big difference for that audio on AM since it is a constant carrier... but i can see having a little extra punch on the ssb side of it as it will help drive the rig to the maximum output effeciency it is capable of allowing
But on another note all i am going to say is i appreciate the responses to the question.. and to all the good CBers that are still out there.hang in there it is always good hearing there are still a few good operators out there!!

jason Creamer
VE9JMC

Still on CB using a stock cobra 29 ltd classic
Threw away the A99 for a 1/4wave groundplane as the A-99 can't touch it

Twisted, buddy, I was with you all the way up to that last bit of junk about pirating on CB.

First, let me clarify that distain for law-breaking is not so much based on simply whether rules are being broken or not; rather, because underlying ethical or moral tenets are being violated.

In the case of CB pirating, the problem should be obvious. Let me use some analogies: If all the bands at a concert tried to occupy the stage at the same time, all the audience would hear and see was nothing but an unintelligible cacophony of garbage. Similarly, a town meeting at which everyone spent all their energy simply trying out-shout everyone else would result in no positive value whatsoever, correct?

Well then, doesn't it make sense that a communications medium which is limited in scope, size, and availability, be regulated enough to allow as many people as possible a fair opportunity to communicate with each other intelligibly? If we're to get any value out of CB, FRS, HAM, or any other band, we all have to learn to "drive responsibly", and stay within the yellow lines - or risk a consequence.

The genuine question here should be NOT whether the radio spectrum needs careful regulation and management, but WHO should be doing it? While it may seem obvious that the FCC should be that agency, due to the international nature of the legal arrangements, consider the following. What if the FCC were simply the arbitrators? Since (in general) band plans and basic regulations are defined by international treaty, we need a federal agency to represent US interests at the bargaining table. However, couldn't groups such as the ARRL, or some other such private agency (perhaps even state governments) be charged with management and enforcement of the various regulations?

Just a thought.

I've had several cheap, strip line linears (palomar, texas star, kris, etc) which are designed for only 4 watts input.
And no, I didn't learn that at any "ham" class. IMHO the spirit of amateur radio is founded upon experimentation.
I saw these results for myself with a "high drive" strip line linear. I've got a Palomar Elie 450HD (or some shit). I can drive it with 8 watts and see 150 out or drive it with 4 watts and see 250+ out.
Check it out for yourself. All you need is an RF wattmeter and a variable power radio, and of course a linear.
You will see the output power decrease as input power is increased beyond the point of saturation.
And, we all know an overdriven linear sounds like dog squeeze.
Oh, and, oh yeah.... be sure to check that out into a dummy load so as you don't piss off the insane antikeyclown posse.

NOT
=)

Jason,

Nice to meet someone else who is perfectly comfortable with the word STOCK!

I run a STOCK Cobra 148NWST (Mobile), and a STOCK Texas Ranger TR696F (Base). My first were an old Sears base station, and a GE 40-channel (both bought in the early eighties). Call me goofy, but I get a kick out of working local contacts on CB (5 - 50 miles). The irony is, if worked frequently (even at 4 watts) 11 meters will occasionally yield an inadvertent DX contact! ;)

Say, is that 1/4-Wave ground-plane a home-brew, or did you find someone who makes them? Also, is it a vertical, or horizontal? I live in an apartment (on the second floor, at least), and was looking for a good "compact" antenna for my base station. I have a porch where I've set up an antenna garden (too small a space to call it a farm! hehe) for my various radios, and have tried methods for the CB base like mag-mounts, but have had limited success.

Thanks,

Gregory M. Gauthier

Perfectly legal to own. It will not be the first piece of gear you own
capable of illegal operation; you can exceed the limits of your license with
any phone transmitter you own as can I and there are no more tests for me to
take. All I need do is call CQ at 28.100 for example. There is not a rig
in existence that will step in to stop me. For that matter, I can run LSB
at 7150 and slop into the narrowband allocation below -- the rules require
ALL of an amateur signal to be within the band (listen up: a classic Element
3 question). Doing something illegal is trivially simple. USB at 14.349 is
out of band and I don't need to open up the PLL to do it.

You will find that rules do vary around the world. When you hear the Brits
pouring thru on 15, they are doing so with a 400 watt limit while our South
American brethern run 5 kw routinely.
On the US phone bands you are limited to 14.15 and up but will hear the rest
of the world go down to 14.1. And that is not a matter of regulation but a
voluntary band plan for them. We are nice guys and give the world a place

to hide from us by regulation.

You will find that as your skills as an operator grow power will be less and less important and it is certainly no substitute for those skills. If you join the geriatric contingent on 75 power is of use and on some parts of 20 almost needed for survival. Personally I will tootle up to 17 or 15 meters with my 200 trusty red hot watts and work them while the mooses fight it out.

Dick NBK

Hehehe .... yeah, it's a bit like that.
cop out now before you become a failure and humiliate yourself !

Best advice is ....

Start with a CB ... a simple HF AM CB is dirt cheap especially from
your local pawn shop. It'll give you a feel for 2 way radio. There
are a few good books available on setting up CB too to help you
with questions like antennas etc.
For something a lot more interesting you would consider buying
a SSB CB radio. You will be able to use that to talk all over the
world, dependant on conditions, and it is a lot like amateur (ham)
radio. The radio's are a little more expensive, though you get what
you pay for. Some people buy an AM unit to start with and then
later buy an SSB once they feel the need for more talk power :-).

Shortwave Radio just describes the frequency range and it's behaviour.
Shortwave radio has international broadcast stations, ships, military,
embassy, phones, commercial airlines, CB, and ham radio.
Shortwave signals basically bounce of layers in the upper atmosphere
caused by solar radiation. This allows signals to travel long
distances sometimes bouncing several times.

Ham radio not only uses shortwave radio, but also has frequencies
in
VHF where you find TV channels.
UHF - things like UHF TV, Police, Cell Phones.
SHF - or Microwave ... yep, the stuff that cooks your food !!!

Not only can you talk on ham radio, but you can send data and
even transmit TV ! or morse code if you are so inclined.
Ham radio even has it's own satellites you can use !
There is so much variety that each faccet is a hobby in itself.
Though your in Canada, a quick peak at the ARRL and you'll
get some idea of what goes on.

MY BIO!!!!!
Cocksucker Peckerhead. Asswipe - K8CPA
Okay, this is the place where I tell you how I came to know how fucked up I am.... and all the personal information about me. I will try and answer all the questions:

Date of Birth: June 28, 1972 <in the fall of 71 my daddy fucked a pig, ya see>

Place of Birth: Detroit, Michigan <in an alley behind the unit block of Waterman Avenue>

Religious Information: Well, first off, I am NOT heterosexual! I am a faggot! I accepted penises as my personal Lord in 1980. I was all of 10 Years old, I knew exactly what I was doing, I knew that if I didn't get cock in my mouth, I would not See the Lord in the rapture of it's jizz pulsing. I have been butt pumped nightly for 12 Years. Although, I was "Backslidden" for about 6 of those years, while screwing female barnyard animals. I am now back serving my Lord penis. I would like to Thank the Rev. Jack Hizhogoff of Detroit Gayboy Outreach (Web at: http://www.dgo.fag) for standing in the gap and slapping his manly dick up my fat faggot ass, and for a playroom where people like me, who were burned by chickenhawks with syphylitic dicks and fellow fags in general, could come and give their hearts back to the Lord penis. My only regret is that Rev Hizhogoff had to start pushing his manly dick in my fat faggot ass to the point where I could not bear to bend over anymore, and I returned to my favorite pastime, cocksucking in the men's room of the Detroit bus station.

"Burned" by the syphylitic cocks in my mouth and asshole?: Yep, Sure was.... I was... like I said before, I was sucking when I was 10, (around 1980), I was originally sucking just anyone, especially born again Christians and other mentally fucked up Baptist types like me. I loved those guys when they’d tell me to tongue their assholes. Condoms were a BIG no-no.... and I believed it!

Speed ahead 4 years. in 1984, The Baptist Church I went to had a bit of a controversy, The Pastor had resigned because he was caught bobbing on my young fat faggot pee pee, and things there were in a state of chaos, and my mom did not want to suffer having to put up with my faggot punk boy ass at home. She enrolled me into the Detroit Institute for Hopless Gayboy Fatass Chumps. I started attending and believe me, going to a Full-TILT anal only gayboy school. after attending one with a stated preference for teaching Hopless Gayboy Fatass Chumps to mainly suck dick, was a MAJOR SHOCK to my system! But one thing kept me from leaving the place, was the fact that these

people seemed to really love the Lord Penis. and there was this one guy, named Robert Snyder, Who played the drums, like John Bonham, (from Led Zeppelin) and we got along great.... (Not to mention he would let me drink his jizz on the sly. That was HOT! least *I* thought so! Hey! I was 14 years old, and my hormones were at full TILT! So SUE ME!) (By the way, Snyder is now married to MoparHolic and living in Ohio. I'm very happy for him.
Anyhow... After being there for about a year. I started being interestind in playing drums for them, as I was a drummer, from a young age... and I wanted to use my talent for the Lord Penis. Well, I eventually got the nerve to ask if I could play for them, and they said sure, as long as I would give ‘em all head before each show! AWESOME!!!... My first time playing for Detroit Institute for Hopeless Gayboy Fatass Chumps was a nightmare! I was scared, I totally forgot how to play because I was violently burbing up the sprem I had sucked down before the show.! I was THAT scared! Anyhow... speed ahead to age 19... I was changing as a person, things were changing at Detroit Institute for Hopeless Gayboy Fatass Chumps, as well. and a bit of a disagreement rose up between me and Snyder. I wanted to suck their cocks the night before the show instead of immediately prior to it. They said they needed the rush in order to play better, and I was asked to step down from the music ministry. Needless to say I was crushed. and very upset at Snyder In fact. I didn't think I'd ever be able to forgive him for that... Anyhow... I entered into what I called "My Dark Years" from age 19-26... Drugs, Drinking, eating 7 meals a day of Burger king, Domino’s Pizza and Taco Bell in order to make myself an even bigger Hopeless Gayboy Fatass Chump.... and when I found out that Snyder had turned heterosexual, I really went off the deep end... until...

MY MOMENT OF CLARITY

Well, when I was around 26, I was totally burned out on the Dominos’ Pizza"... I was just sick and tired of being sick and tired... I needed cocks rammed up my Hopeless Gayboy Fatass Chump poop chute and I needed it BADLY!!! the people I was upset at were gone from Detroit Institute for Hopeless Gayboy Fatass Chumps. I was not getting any older... and I was ready to stop running from the Lord penis. But I had issues to resolve in my life... How could just Go back to the fags that had only "screwed" me and wouldn’t let me suck cocks in the first place? I still felt like I'd been wronged! But I had the Clarity moment of a lifetime... This thought crossed my mind...

"I was a FAGASS PUNKBOY MOTHERFUCKER BEFORE I came to the Detroit Institute for Hopeless Gayboy Fatass Chumps”

Why am I allowing something that happened 7 years ago, keep me from serving my God, the Penis?????????

My Return to total Fagassedness!

Well, I was 26 years old... I was wanting to come back full time to Lord Penis. But I wasn't going back to Detroit Institute for Hopeless Gayboy Fatass Chumps (at least not at that time!!!) I had heard about a church called DGW (short for Detroit Gayboy Outreach) and I'd heard in the past that it was a nice place... So..... I wanted to be where the Holy Spirit of the Lord Penis was... and there I was... I came to the church on Ann Arbor Trail... my first experience there was a interesting one, I came in the parking lot... puffing on a 7 year old kid’s cock, (in my years of being Backslidden, I picked up a nasty 2 child a day, sucking habit...) I finished my child, and went in, and right away I heard SCREAMING in my ear... "what are you doing here???" "these are the people that Screwed you, but would not let you suck dicks!" act..... and when the song service started, the Holy Spirit of Lord Penis fell, and I became very uncomfortable, to the point when I had to leave! and I did!, I remember a usher, running after me and saying where are you going??? I remember looking back at him and saying... "I can't handle this SHIT I got to get out of here!" and I left.... Well, that week... I sort of prepared myself for service to mens’ dicks next week, I took my Book, “Gay Sex For Dummies” to work. (I worked midnights as a Security Guard, so I could walk around the ghetto apartment complex I patrolled and peek in windows at sleeping little boys. and I had lots of time to masturbate...) My mother realized I was fantasizing about kids’ nuts.... I found myself reading the Word, and Praying for a big hairy chested man to suck off.. by Sunday, I knew I was ready to come back... Went back that Sunday.... they had a Illustrated Sermon on fellatio with pictures from several fag magazines, it was great, and needless to say, my Hard cock, Melted in the presence of the Lord Penis. and I knew that I wanted to come home.

I thank the Lord Penis for his Love, That takes us whacked out people as we are, and makes us his Servants....

Where am I now... : Currently Attending Adult classes at The Detroit Institute for Hopeless Gayboy Fatass Chumps.

HAM RADIO?!?!?!?!?!?!?I BETRAY IT AND WORSHIP ILLIGAL FAGGOT KEYCLOWNS BECAUSE THEY LIKE SUCKING COCK AS MUCH AS I DO!!!!

I was, I guess you could say, Born into the CB FAGGOT Hobby... My Father, was a Dyed in the wool CB FAG... I even had a stint in the CB radio hobby as well... Anyhow, one year (I think I was around 8 Years old...) my parents and I went to have sex with my Grandfather's Sister and her German Shepherd, in Conway, Ark, which is the world capital of CB FAGGOTS. To say the least, was totally impressed with the FAGGOT CB Hobby, because it satisfied my craving to run my faggot mouth constantly AND to suck cocks!!!. and for years I did nothing about it, just sucking dicks constantly and that linear tuning on those tube type ILLEGAL FAGGOT KEYCLOWN amplifiers was just too hard to learn. Speed Ahead to age 14, a friend of mine, Joseph Hampton (Ham call sign N8ExtremeCockNosher-but ALSO a secret ILLEGAL FAGGOT KEYCLOWN) who lived across the street from me, and also was interested

in getting his dick polished as well.. Well, we had some gay sex together... (you see this was when you had to be secretive about your gayness! I was KB8HHZ (hugely horny for zebra!) and Joe was KB8HGL (Hungry Gonad licker!)... I believe me and Joe were originally licensed in 1989....

On April of 2000. The FCC Restructured it's licenses... and I paid a renegade VE 50 bucks and Received my General Class Ticket... I often masturbate while thinking of linears for ILLEGAL FAGGOT KEYCLOWNS. And really think Riley is mean. Maybe if I sucked his dick he would not be after traitor scumbag shithunk fagboys like me.

My Call? Is a Vanity call that I paid for, it is my initials! Because as a Hopeless Gayboy Fatass Chump, I need something like that for my ego.

so there you go!

I hope this answers everything you wanted to know about me!

Hello All:

Looking for one of the old Starburst 5/8 Wavelength Ground Plane Antennas, it had 5 or 6 ground plane radials, and was advertised in the older CB Magazines.

It was said to be a very good antenna, wood like to give it a good look over.

I travel all over the US at times and wouldn't even mind just driving by and looking at it, I'll buy mass quantities of beer, and you will need to BBQ. Then your wife will ask when is "he" is going to leave, for good........

Message-ID: <20010705080856.13876.00002511@ng-bk1.aol.com>
Source record: 87823

With the 4th falling at mid-week, there has been a lot of radio activity spread out over several days. I've heard numerous requests for "local information" on Channel 19. Seems like a lot of motorists head out of town without maps, or can't read road signs! (grin).

There have been a couple of "caravans" heading to the beach, using CB to keep in touch. But most of the caravans were using FRS (Family Radio Service) walkie talkies to coordinate bathroom stops, etc. I have not heard any emergency traffic on either license-free band. However, I had an interesting experience last night.

I took FRS to the local fireworks display to see how much radio traffic I could hear. A friend had given me VIP tickets for covered seating above the crowd, so I had a great vantage point from which to listen. There was a small amount of traffic from 6 to 7 PM. Then thunderstorms rolled in, with lots of lightning and heavy rain.

Immediately, several stations became active as families tried to get their blankets, chairs, and food to the safety of their automobiles. I heard three groups coordinating this kind of activity. One was on Ch. 8 and two groups were on Ch.12 (with different CTCSS codes).

There were folks on Ch. 2 (code 1) who were associated with the event. I heard some parking chatter. They may be the Police Aux. group, whose members go through eight sessions of training in how to assist law enforcement officers.

I put my Motorola's scanning features to good use. (I use the T6320 model). I had a direct connection to the National Weather Service via Amateur radio. The SKYWARN EC and I were in the VIP section at the same table, and of course we had our radios. We activated SKYWARN from the park and then turned over Net Control duties to a base station. The base station operator could give us radar reports from his computer, and the NWS gave us storm updates.

As the T6320 scanned the 14 FRS channels, it locked into the CTCSS code being used. That gave me an opportunity to broadcast weather bulletins to these groups, including the event volunteers. (Without the CTCSS scanning feature, the groups would not have heard a broadcast on their channels because of "privacy codes".) Meanwhile, we were giving verbal reports to the group in and around the VIP seating area.

At one point, lightning hit on or very near the roof of VIP seating. It's well grounded, but it really crackled for several seconds and it knocked out some lights and the PA system. That made it difficult to communicate to the 25,000 spectators that the event (a symphony concert and fireworks) had been canceled.

Cancellation was a good call, by the way. The storms were intensifying and were slow moving. It continued to rain, with lightning, until well after

midnight.

The range on a handheld CB with 5-foot antenna will be approximately 1 mile,
which is similar to what you would get with FRS walkie talkies.

Greetings!

You've just answered your own question regarding the 4 to 7 watts conversion.

Before I go on...DISCLAIMER:
I'm not the type of guy that gets into overmodulation. I have neighbors, and I'd rather have them like me for leaving them alone than getting a Worked All Neighbors award from the local association. Besides, I like compression, Dynamic range has it's place in my Home Stereo.

Like you said...Overmodulation and FM-ing. Two key results from taking a radios life into the hands of someone that doesn't quite understand what they are doing.

There are some key points others posting may not see...

If you take a stock radio to a simple power meter, you'll find the carrier power is 4 watts but will move forward on the meter from that 4 watt mark on up to 12 watts easily as you talk into the mike.

Now, if you're talking 4 watts to 7 watts carrier, you lose headroom normally found for the purpose of modulation power - inside the final and driver transistors. In fewer words, they saturate and distort their output far quicker even with less audio drive than using a simple 4 watt stock radio alone on it's supplied mike.

You can also suffer the fate of a blown Modulation Transformer or AM regulator section by "cranking" it up "Hard over and Hard over" on the controls inside. It's from the extra current draw the radio's finals will ask for that the radio is simply not designed to handle. If you have a lot of spare parts laying around, this shouldn't be a problem in trying the "Great Experiment".

Now, granted there is a lot to be said about a simple "limiter" removal kit, the wirecutters and pliers. Soldering iron and Solder extra. You do get a radio with a "loud" punch to it. At a price.

Getting more out of radio by defeating the limiter is not the best approach. But it is the fastest way - and can cut the radios' life shorter. Limiter functions are not simply for TX audio - it's there for other reasons too.

Many CB radios, this limiter is on, or enabled, all the time. It provides protection for the audio chip and it's related

components - including the speaker. When voltage spikes or other noises get thru the receiver, they can damage what's in the audio line and there goes the ability to TX - that same audio line is shared for both RX and TX functions.

Radios aren't bulletproof, but are darn near close to it when they're left alone. Defeating the limiter has it's place but you are also looking at a shorter life-span of the radio.

A simple CB radio with a defeated limiter is simply asking to be destroyed by the elements you put it in. Voltage surges and static on the power supply line, along with receiver noise and switching transients, all are going to take their toll on the radio. Having a limiter in place, even if it's been turned off by the user, you still have something in place to reduce a cascade failure. It's own PIV and forward breakdown ratings are going to kick in. Although you may wind up with a dead radio, it can be repaired easier than one with a defeated limiter - you simply have fewer things to replace. The spike was stopped before it did further damage.

You can get some help in producing better [loose term] audio with properly re-working the audio section in *any* radio. You can use the limiter to a greater potential as a compressor control rather than a "limiter", if the work is done properly. Too much emphasis lately has been placed on "swing" versus actual envelope modulation.

When someone mentions "Swing" I can side with them up to a point. However, I have radios on my bench that simply give up trying to figure out a wildly swinging carrier and produce distorted audio instead.

Swing naturally occurs on any AM signal - CB or otherwise. There's a natural swing and then there's the "forced" swing. A properly tuned radio with have a natural swing and will sound smooth and clean - a "forced" tuneup will sound harsher and have a "punchy" or "raspy" sound, but it looks cool, with a needle bouncing around on the meters face. LED's? Well, you can say they're "throwing 3 to 30+ pounds" to you. LCD types? Don't do this in cold weather! You'd be lucky if you get a segment to stay on long enough to see it.

Swing is good to a point, but too much and you should really look into starting a record company and watch VU meters 'till your hearts content.

I wish you well on your Amateur endeavor. I just don't want to see you wind up with a bench like mine, full of parts and shells from radios that once sounded excellent - until their owners decided to get more out of them - and found out the hard way.

Some of those owners knew better, and yes, they are Amateurs.

On Thu, 05 Jul 2001 07:59:35 GMT, while the modem was busy tying up
IRQ's with the Mouse, jason creamer <jason1@nbnet.nb.ca> dissertated
the following:

:+> well to be honest i ran cb before for a while before getting my ham
:+> ticket.. but it always amazes me to see ppl asking how can i modify my
:+> cb so i can get a output puwer of 6 watts..... i'm not particularily
:+> asking how it is done but more like why?? i mean if you take a amateur
:+> radio hobbyist.. he is not going to go out and buy a kenwood TS-440 and
:+> take his 100 watt variable output and try to peak it out to 102 watts..
:+> there is just no sense in doing itand as far as i can see on the
:+> backing off on the power output from 4 watts to 2 or 1.5 watts but
:+> opening up the modulation circuit... well all i can get out of that is
:+> "what did you say???? i'm sorry i can't understand you.. you're OVER
:+> modulated!" i mean it does not make a big difference for that audio on
:+> AM since it is a constant carrier... but i can see having a little extra
:+> punch on the ssb side of it as it will help drive the rig to the
:+> maximum output effeciency it is capable of allowing
:+> But on another note all i am going to say is i appreciate the responses
:+> to the question.. and to all the good CBers that are still out
:+> there.hang in there it is always good hearing there are still a few good
:+> operators out there!!
:+>
:+> jason Creamer
:+> VE9JMC
:+>
:+> Still on CB using a stock cobra 29 ltd classic
:+> Threw away the A99 for a 1/4wave groundplane as the A-99 can't touch it
:+>

Not for calling someone a "dickwad" though. We all know Chuckies buttons to push and he still has the same reflex action he has had for years when provoked.......He gets belligerent. His flaws are well known and usually just overlooked by most of the group. If we didn't do this he wouldn't here to continually kick around and make fun of.

Oh come on Dick, you know as well as I do why these radios are modified.
I mean come on, quit acting dumb!

Your search - rmplstlsknw@aol.com - did not match any documents.

"Why not just telegraph your identity with your breed of contempt? Oh,
my apologies, in order to accomplish that, you would have to learn
Morse code. Note the mindreader part of you, knowing what everyone's
intentions are with their radios is on display here as well. Or is it
your arrogance? I see you figured out no one is replying to you, you
just needed a little help with exposure, that's all. Keep trying new
names. Someone may reply to one of them (eventually) if you can conceal
your identity a little better. Believing your charade intact is not
"acting". You ought to just get out since you hate cbers. Remember? You
said if one is a cber he has nothing useful to say. So again, why are
you here? Your post about "creative trolling" answers that also, would
you not agree? Besides, your disdain is present in all your posts..you
can't help it, you are not a decent person and you have no control. That
belongs to the rest of the group. You should split or chill out before
you mud up your name all over the world worse than you already have,
dude."

Twisted, buddy, I was with you all the way up to that last bit of junk about pirating on CB.

"Ha! That las part wasn't writte by me or anyone I know. It was a post of Sparkys I took for a sig for the sheer absurdity of it."

First, let me clarify that distain for law-breaking is not so much based on simply whether rules are being broken or not; rather, because underlying ethical or moral tenets are being violated.

"While I may tend to agree, it certainly depends on the situation and law being examined. There are exceptions to all rules."

In the case of CB pirating,
the problem should be obvious.

"That depends on what we all define as "cb pirating." As we have seen, the definition runs the gamut in here."

Let me use some analogies: If all the bands at a concert tried to occupy the stage at the same time, all the audience would hear and see was nothing but an unintelligible cacophony of garbage. Similarly, a town meeting at which everyone spent all their energy simply trying out-shout everyone else would result in no positive value whatsoever, correct?
Well then, doesn't it make sense that a communications medium which is limited in scope, size, and availability, be regulated enough to allow as many people as possible a fair opportunity to communicate with each other intelligibly?

"Exactly. And that isn't happening."

If we're to get any value out of CB, FRS, HAM, or any other band, we all have to learn to "drive responsibly", and stay within the yellow lines - or risk a consequence.

"No problem. When it comes to talking on certain areas of the freeband, and I am NOT refering to any portion of ham bands whatsoever, I know many who gladly accept the risk of consequence."

The genuine question here should be NOT whether the radio spectrum needs careful regulation and management, but WHO should be doing it?

"Again, another excellet point."

While it may seem obvious that the FCC should be that agency, due to the international nature of the legal arrangements, consider the following. What if the FCC were simply the arbitrators? Since (in general) band plans and basic regulations are defined by international treaty, we need a federal agency to represent US interests at the bargaining table. However, couldn't groups such as the ARRL, or some other such private agency (perhaps even state governments) be charged with management and enforcement of the various regulations?
Just a thought.

"And a good one at that. How about this. The FCC IS government. That makes them tax dollar supported. See where I am going with this? I believe that a balanced mix is needed. If it was just left to the public at large, I feel the freqs would be auctioned to the highest bidder, which is happening anyway. A sound protocol is needed to protect the rights of amateurs and cbers alike. Each year appears to yield more problems instead of solutions. I am not intensely familiar with the FCC inner going ons, but I am somewhat in the loop and I can say that there are indeed too many chiefs and not enough indians. Delegation appears to be the business-as-usual thing to do, no matter who is in charge. Remember, it is a government entity, so it is suspicious from the word go. Prisons can go private, maybe even SS, why not spectrum management? Just a thought."

□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□

Assumption #1: It is not my job to enforce the law.
Response: It is my legal right, moral responsibility, and independant choice to enforce any law I see fit to enforce. But I am not enforcing -- or breaking -- any law by posting in this newsgroup.
Assumption #2: I get upset about the law being broken.
Response: I do not get upset about any CB law being broken. On the contrary, the more RF pirates that break the law the better.
Assumption #3: The breaking of the law does not directly harm me, a friend, or a loved one.
Response: RF pirates affect me directly in my work.

> Oops, I didn't realize. I'm actually in Canada...

The USA and Canada regulations for CB radio are nearly the same. No license required, and the contents of what is discussed on the air can be nearly anything. The range you can expect to get normally is rather limited since all communication has to be from one station directly to another. External power amplifiers are not permitted, and no repeater stations exist to extend the range of a low power hand held radio either.

Ham Radio is a different story. There are differences between Ham Radio in the USA and Canada so you need to check the addresses below for more info on Ham Radio operation and licensing in your country. The "Basic" class of license is so easy to get the even kids as young as 10 years old get licensed. The Canadian "Basic" license class is much like the USA no-code Tech license class except your limited to some what lower power levels and a few other minor differences.

I would have to agree with another poster and recommend getting a "Basic" class license. That way you can take advantage of using the many repeaters around the country to provide easy and clear communications using a small hand held radio.

<< "That depends on what we all define as "cb pirating." As we have seen, the definition runs the gamut in here." >>

What a novel idea! If you want to be a criminal, simply redefine what a crime is. Law says no unlicensed transmission above 27.405? Simply act like "there is no law" and you can transmit all you want. The logic of the criminally insane (twistedhed) prevails!

>If we're to get any value out of CB, FRS, HAM,
>or any other band, we
>all have to learn to "drive responsibly",
>and stay within the yellow
>lines - or risk a consequence.

<< "No problem. When it comes to talking on certain areas of the freeband, and I am NOT refering to any portion of ham bands whatsoever, I know many who gladly accept the risk of consequence." >>

Twistedhed's solution: just erase the yellow lines he feels are inconvenient. No yellow lines, no violation. More criminal insanity.

Risk? Sure, he's willing to take a risk at getting caught: like a looter who watches a store before entering to see if the cops will likely show up or not.

yes everything i run here is stock.. from CB to VHF there has not been a radio that i have owned that has been modified... but on the 1/4 wave groundplane you asked about it is home brewed and verticle... the only thing boughten was the 102" whip from radio shack for the verticle element... and the 4 groundplane radials are approx 102"-106" angled at a 45 degree angle to give you close to a 50 ohm match.. i say approx because i cannot say that the same measurements that worked for me will work for you as well... but i have had no trouble dxing on the quarterwave.. as i have contacts in many states/countries just on AM alone and on 4 WATTS.. he he just goes to show that you don't have to be a big power station to get DX contacts

well i thank you for your reply.. but i myself don't want to modify my radios as i have too much money/hard work invested in my station set up.... as i do have a cobra 25ltd classic that is all stock.. that cover has never been off of it since i bought it new.. and the amateur rig right now is a kenwood TR-751A 144mhz allmode radio... also have a kenwood ts-440.... that i know can be modified for the cb frequencies.. not only to recieve them.. but as well as transmit.. but again the cover has never been off of it either.. but the antenna on vhf i use is a homebrewed stacked array of 7ele yagi's verticle.... and for the ssb of vhf i have a 13b2 13 ele horizontle yagi.. so i have no troubles for meking contacts on stock radios. but my point or the point i could not figure was that y modify for more power when it does not get you more dx contacts than the next door neighbour running bearfoot

"And this was sent to the abuse department, support department, administrative department, and security of optonline. Have a great day there in Kansa City Land."

To whom it may concern,
  The complaint you received by the individual below is bogus. This individual has been the cause of much strife on the newsgroup rec.radio.cb for several months. The individual doesn't even exist, evidenced by the fabricated surname. As shown below, the individual immediately posted your response to usenet (A TOS violation in and of itself) in an attempt to further his own agenda. I urge you to closely examine the matter at hand before acting on behalf of a jaded and disgruntled individual that has an ax to grind with everone that participates in the posting forum. The information you were supplied by the individual is misleading at best. The devices in question are perfectly legal for experimentation among electronic hobby enthusiasts and are used in medicinal research and technology as well, no license or special skills needed to experiment and learn. The only illegality concerning said devices is the manner in which they are employed. While speech content of actual illegal and/or illicit acts do indeed take place in many facets of society, simple speech in and of itself is totally free and should remain as such until evidence suggesting otherwise is set forth in a court of law. I strongly urge you to consider the merit of such a complaint when the individual complaining does so from a remote domain, bogus name, and no contact number. If you have any questions, please do not hesitate to call on me at (snip) to discuss this matter further.
                          Thank
You for Your
Assistance,

Optimum Hacking

To abuse@optonline.net, support@optonline.net, I am bringing to your
attention the following posts (below) from the newsgroup
rec.radio.cb.
These posts involve the illegal activity, as per Part 2.815 of Title 47
of
the US Code of Federal Regulations, of advertising for sale a radio
frequency amplifier capable of operation between 24 and 35 Megahertz.
This
is an offence that is punishable by fines, imprisonment, or both. Free
and open trade of this type of illegal equipment encourages others to
do the same, and detracts from the criminal nature of such activities.
It
also deceives the public to believe that such activity is legal and/or
acceptable behavior.
Illegal operation of radio transmitters and amplifiers causes
interference
to radio and television broadcast stations, and disrupts radio
communications for emergency services and other licensed users. This
type
of "RF thievery" is analogous to an internet hacker that can "steal" an
IP
address, disrupting the peaceful and legal operation of the internet
service provider that has legal right to that IP address. Despite being
asked to stop, your subscriber (cbmods@optonline.net) continues to use
Optonline.net to post illegal items for sale on Usenet.
Here is an excerpt from your own TOS Policy:
20. Prohibited Uses of Optimum Online/Optimum@Home: The Subscriber shall
not use the Optimum Online/Optimum@Home Service or the Services for
illegal or inappropriate activities, including but not limited to:
(a) posting, transmitting, distributing or disseminating content which
is unlawful, threatening, abusive, libelous, slanderous, defamatory or
otherwise offensive or objectionable.
I am confident that you will take any action that you feel is
appropriate.
Thank you.
Sincerely,
Aaron H. Voobner

Dear Mr. Twisted,

There are many "holes" in your argument. Among them:

* your own rather embarrassing posting history
* your own fabricated, anonymnous, bogus persona
* your total lack of actual law "cites" to back up your claims of what is legal and what is not.

However, feel free to post more of your delusions for the NG's amusement.

Thanks, Richard.

Actually, I was not planning on buying anything NEARLY that powerful. In fact, because I live in an apartment, I doubt very much I'll be able to go beyond the stock 25 to 150 watts of one of these typical rigs I'm seeing in the PopComm magazine (once I'm licensed, of course).

I was really just describing a hypothetical in order to try and understand what exactly are the REAL "limits".

Expander was just a model name for one of their microphones, i.e. Ford Taurus = Turner Expander 500. It's one of the few Turner mics that I'm not too crazy about, but some swear by them...sadly, some even swear into them. :-(

Here's a link to an ebay auction of one.

N7KN's boss (Train) doesn't like mention of legalities in the
newsgroup. (It puts a damper on his sale of illegal CB amps. And
they ARE illegal to advertise, sell, and use -- in case you wanted to
know)

This perpetuates a common myth in rec.radio.cb, namely that there is only "one" person in all of Usenet who disagrees with illegal CB. The illegals think that if they can just find and eliminate this ONE person, then there will never be a word said against illegal CB again, ever.

Surely any intelligent person can see through this myth as nothing more than a combination of wishful thinking and egocentric fantasy.

By the way, the chief believer in this "lone gunman" theory is our resident nutbag, Twistedhed.

I knew what you were thinking, I am an apartment dweller as well.

In the radio biz or at least the regs, there are three hypothetical bodies. Things have gotten a bit smeared of recent years but the concept lives on. These bodies are the station licensee, the operator, and the user. Probably best understood in the broadcast side of things.

Down at WINO (Wonderful Wino) the station licensee has the grant of permission to operate a station in the public interest at 1110 kHz with 50 kw and a given antenna radiation pattern. It is his job to be sure the license grant and rules are followed. Could be a corporation, could be Aunt Matilda so long as there is financial and managerial competance.

There is a licensed individual who is in charge of things technical. He is the operator and is responsible for tech specs and the proper operation of the hardware so that WINOs 3rd harmonic does not bury CHU (Canadian time station) and start a border war. It is this man that gets the green weenie when things don't go right technically.

Finally there is Uncle Al the Kiddies Pal out there spreading joy and happiness over the mike being responsible for exactly nothing. He is a User.

An Amateur ticket is both a Station and Operators license, at one time they were separate. So I have the privlege of establishing a station in the

Amateur Service called N&#65533;BK, the hardware owns the call sign, I don't. But
I own the hardware. I can operate any station within the privleges of an
Extra Class licensee and the station license (and some other cases today).
The results of this concept in the Amateur Service were at one time bizarre
but they have been dealt with; but the concept lives on. No one asks silly
questions like why WINO is running an old 500 kw VOA transmitter on 1110 at
50 kw and they do not ask me why I own Radio Moscow's old jamming hardware
for 75 meters. Using it to capability is what gets me, or WINOs engineer,
in the hot soup.

A CBer is a user, pure and simple. It is when he tries to be an operator or
station owner is when the line is crossed. Kind of like Uncle Al running
amok. So plotting to run amok or picking up the hardware to do it is
illegal as, of course, is doing so.

Whether it 'should' be this way is debatable but this has been the script
since about KDKA.

I would. My Polish side of my family came to this country to get away from which is wrong. If I would have to lay down my life to preserve liberty I would do so. I love my country, yes our country has many faults which is pushed along with greed and hatred. The good people of this country should rise up and show what they want. It only takes a few people to mess things up for millions and that has gone on for a very longtime. People have gotten relaxed and tehre freedoms are taken away becouse we have so many evil people have gotten into prime political positions. We have allowed this. So this is our fault.

I anticipated that you would come up with such a lame excuse. I
figured that even if I posted a picture of myself, you would probably
whine that it is someone else, or that I found it somewhere on the
internet. So instead, I left a little calling card next to a small
fountain on the walk by the side of the river about half a mile from
the First Ave Bridge. If you want to keep up this lie then you better
go find it before another newsgroup reader does. BTW, I left quite a
few of these little 'calling cards', this is just the first one. One
of them has your real name and address on it. Have fun!!!

Wow. Guys, I just learned something. No unlicensed transmissions above 27.405. Please be sure and throw away your 900 MHz wireless phones - ooops - and your 49 MHz wireless phones (man, those are OLD) - and your 1200 MHz phones. Hey, got wireless speakers on 900 MHz. Best throw them out too. Oooops - I forgot cell phones. Say, what about the wireless doorbells? I don't think the FCC regulates above 300 GHz, so if you have any infrared (or above) links on your PC, television, etc, those are probably OK. Arrrgh! What frequency do our garage door openers operate at? ARRRrrghhh ! The FRS radios are illegal too ...

Sorry, Infom8tion, it's just that this actually started out to be a nice thread. They don't seem to be able to get more than about 3 deep before this legal/illegal stuff starts again. A few people started showing up on some of my favorite boards; fortunately, they have ISP banning and a few of them have employed it. Most effectively.

Jason, I almost assumed you were a troll starting the thread again; however, I see you are not. You are absolutely correct about not needing a lot of power. I did contact a station in Webster, NY (near Rochester) from Guam Island running 15 watts. One of the guys regularly ran phone patches running 20 watts (but he was using a huge rhombic antenna; I was running a TH6-DX up 102 feet over salt water). Why dirty up and possibly damage a good radio? Makes little sense to me.

Twistie Who are they? Why don't you post some proof that proves who they are. Not who they said they were and who you think they are from what they have said, but some actual proof that someone has gotten from an ISP or an email stating exactly who they are. Hell someone said its easy where is the info!

"Twistedhed" <twistedhed@webtv.net> wrote in message news:15053-3B44E1D3-3@storefull-121.iap.bryant.webtv.net...
From: Lost in Pa.
(WorldWideProziac)
Thats what I say these Anti Keyclowns have been at it for months and no one knows who they are

"Wrong. Everyone knows exactly who they are. Thing is, no one cares. You gals that bitch the loudest about cbers are the same ones always obsessed with who is who, as if you may be someone else besides the original code- challenged loathesome foursome that are inferior to every radio op I ever met, ham and cbers included. Thing is, you're not. And here you frolic in perpetuating the myth that someone actually gives a damn about any of you."

Assumption #1: It is not my job to enforce the law.
Response: It is my legal right, moral responsibility, and independant choice to enforce any law I see fit to enforce. But I am not enforcing -- or breaking -- any law by posting in this newsgroup.
Assumption #2: I get upset about the law being broken.
Response: I do not get upset about any CB law being broken. On the contrary, the more RF pirates that break the law the better.
Assumption #3: The breaking of the law does not directly harm me, a friend, or a loved one.
Response: RF pirates affect me directly in my work.

Wow. Guys, I just learned something. No unlicensed transmissions above
27.405. >>

Save the sarcasm, Jim. WE know that YOU know that what was meant was 27.405 in the CB band, and not 900 Mhz. This *is* a CB newsgroup. Do you think we REALLY meant to imply anything above 27.405 is illegal?

No. Of course not. But since you have taken on the role of defender of the guys who sell amps and wedge alternators under the hoods of Chevy Suburbans so they can blow the locals off channel 6, then we might as well keep posting our reminders of what is legal and what is not.

OK, why don't we see more "worldwide" posts and discussions here in this NG (except for the occasional post in a foreign language that goes totally ignored unanswered)? Why does it appear to be exclusively populated by CBers from the USA? With that in mid, wouldn't uk.rec.radio.cb be more appropriate to post the for sale ad of an "export" radio? Or any of the half-dozen CB international newsgroups where non-USA folks hang out?

(Of course we know that NO ONE in rec.radio.cb the USA is interested in buying such a radio as the one he's selling, right?)

I still can't beat your record with the marbles old Moped how many was it 243? and while were at it thats another nic and e-mail address for you this week, but hell whos keeping score? Oh I forgot you are. I am glad you are fascinated with my nick names Why is that a problem is it just ok for you to change yours and not me? Better yet who do I have to ask before the next change? Didnt hear you on the CB today!

3862. Re: The 4th of July ! - and illegal transmissions

Newsgroup: rec.radio.cb
Date: 2001-07-06 04:53:49 UTC
From: "Gregory M. Gauthier" <gmgauth@attglobal.net>
Message-ID: <3b4546e6_2@news1.prserv.net>
Source record: 88151

As a matter of fact, ALL of those frequencies you mention are covered under US Code Title 47, Part 15.
(http://www.access.gpo.gov/nara/cfr/waisidx_00/47cfr15_00.html)

More specifically, while Codes 15.201 and 15.305 does not require "licensing", it does specifically require manufacturers of intentional radiators to obtain FCC certification prior to marketing their devices, and defines limits for antenna length, radiated power, and other technical aspects:

==========
[15.201]
(a) Intentional radiators operated as carrier current systems and devices operated under the provisions of Secs. 15.211, 15.213 and 15.221 !==> shall be verified pursuant to the procedures in subpart J of part 2 of this chapter prior to marketing. <==!

(b) Except as otherwise exempted in paragraph (c) of this section and in Sec. 15.23 of this part, !==> all intentional radiators operating under the provisions of this part shall be certificated by the Commission pursuant to the procedures in subpart J of part 2 of this chapter prior to marketing. <==!

(d) ....For perimeter protection systems operating outside of the frequency bands allocated to television broadcast stations, !==> upon receipt of a grant of certification, <==! further testing of the same or similar type of system or installation is not required.

[15.305]
PCS devices operating under this subpart !==> shall be certified by the Commission under the procedures in subpart J of part 2 of this chapter before marketing. <==! The application for certification must contain sufficient information to demonstrate compliance with the requirements of this subpart.
==========

So, YES, if you construct a device that operates as an intentional radiator in any of the frequencies specifically defined in Part 15, and fail to obtain proper certification from the FCC, you are in violation of the law...

Oh, and yes, Part 15 also covers frequencies from 1000 to 6000 MHz, and 46 through 77 GHz.

Odd........

Ham Radio in Sydney has IRLP on the Blue Mountains and Wollongong enabling me to dialup about a hundred other repeaters world wide as well as the ability to hold a decent conversation. with more than enough other repeaters to provide a quality of coverage that is exemplary.

UHF CB in Sydney has Channel 1. I have listened to it on a number of occasions and I'm at somewhat of a loss to explain it's advantages. Some one want to list them?

I agree with the other responders, Mr. Hampton. This is a stretch and
contributed nothing to the thread.

>
>this actually started out to be a nice
>thread. They don't seem to be able to get more than about 3 deep before
>this legal/illegal stuff starts again.

In many NG, a thread deteriorates after seven posts. In rec.radio.cb, the time
frame is much shorter. It's a carry-over from being on the air. We talk quick
because the band may drop out or some channel-hog may "walk" all over us.

QRM

With a good base antenna, you can pick up a nat fart at 5 miles.

Even a scanner needs a real antenna for VHF-LO operation. It's
the frequency that requires a real antenna. At cellular frequencies,
a quarter wave is 3.03 inches (at 858 MHz).

Hello Doug or Frank:

Are you kidding this radio is very popular here in the USA.

The Prez Lincoln is really a great radio. The Chip Switch modification is shear guineas!

The other Mods I like are the IF crystal filter, the 5 Kc only switch mod, and of course the new versions have the MRF 455 installed as a finial RF Amp.

The noise blanker works great, but I still have some fuel pump noise I will fix later.

I got a pair of new RCI 2970's radios that I traded off for two new in the box Lincoln's.

With the Chip Switch Modifications I can keep an ear on all the boys from 12 meters to 10 metres. Don't know why 12 meters is so popular for some of the boys, but we have a few who hang there on a couple of frequencies.

The locals are trying to get a 10 meter FM repeater on a hill, and see what happens, I am supplying one of the hill top antennas.

So with just a few memories programed in I can keep a ear on the boys on 12, 11, and 10 meters, this is fantastic.

Maybe you should get one!

I turned off my filters. I still skip some of the crazy stuff.

Now if I could get some locals in my neighborhood to get on
the radio. The last local had a lightning hit last week fry
his Antron and 148 along with his power supply, stereo, TV
and answering machine. He said a spark went around his window
sill 3 times!

I'm sick of the ham-attitude on the sideband channel I used
to frequent. They have extra-class assholes now. These are
the same hams that said they wouldn't change because of their
ticket. Right. I heard the leader of the ham-pack say he's
only been on the radio about 5 years. That makes him a
newbie compared to me. I've seen many come and go since '77.
I be on 11 meters long after they tire of ham or other radio.

Don't let the so called snooty amateur on cb band drive you from what you like.. many of the amateurs will never admit to anyone that tyhey started out on the CB band.. but i guess that is their perrogative.. but on that note i will say that i hold an amateur certificate and i won't deny it.. i started out in CB as well and do still operate on it.. if you get a chance or have the capability to listen to the local amateur radio repeaters and simplex frequencies.. you'll be suprised at how many voices you might recognize on there that operate CB as well..

he he well i apologise for starting the thread again.. but yes i agree there why dirty a good thing.. most operators and there are a majority of them out there that do make their own antenna's(my hat goes off to them) then there are the operators that get good results off of the A-99's or the old Shakespear Super BigStick.. or they just go with the yagi antenna's and there is nothing wrong with that at all. when i started i had the bigstick from shakespear.. and had many problems with TVI with the neighbours..(i guess from my understanding the big stick causes alot of splatter across the bands) but i got into building my own antenna's and for some it is an easy chore to do.. and for others it is not so easy.. but i made the 1/4 wave groundplane antenna and never had another complaint about TVI or had Industry Canada show up at my door.. but in my case i had found that not only did the 1/4 wave GP seem cleaner in rf radiation but it also seemed to outperform anything i had boughten(including the neighbours A-99) which really suprised me. but it is the building of my own antenna's and tinkering around with them that i think can really make or break a station
Sorry about the slow response.. but i was busy building a 11 ele yagi for VHF

For you folks who like this stuff, here's a good article on
Smith charts and SWR:
http://www.tmworld.com/articles/2001/07_smith.htm

I couldn't resist pointing this out: "The relationship of reflection coefficient and SWR depends only on the reflection coefficient magnitude and not on its phase." The length of your transmission line only affects the phase (ingoring minor losses and common mode currents). And, as the man says, the phase does not affect your SWR. That is, coax length does not affect SWR.

I'm moving August 1st to a place where antennas are not allowed. I was looking at either the Firestik IBA-5 system placed on the patio deck (I'm ground level) or a wire dipole tacked to the outside wall. I mostly talk sideband on channels 36, 38 and 27.555 using an Eagle Sidewinder 400 and a Palomar 225. Which antenna will work best for my situation? If i go with the Firestik set up can I use a 102" whip in place of the 5 foot Firestik antenna? Thanks.

It seems like all us hams who started out on CB, usually come back to it.
God knows I'll never throw away or sell any of my 11 meter gear.
I think I'm a newbie compared to you. In '77 I was just a snot nose getting
mouthy with truckers while sitting in dad's Vista Cruiser.
This is, in fact, a hobby. And, life is too short to turn people off with
holier-than-thou attitudes.

I tried looking that one up at Radioshack.com. I don't think it's in their online data base.
But, you might try it if you know the original catalog number (example: 940-1190).

"Hey! Where you been bottom feeding lately?"

OK, why don't we see more "worldwide" posts and discussions here in this NG (except for the occasional post in a foreign language that goes totally ignored unanswered)?

"Uh, we do see worldwide posts and discussions in here. Maybe you have trouble reading or seeing them. I told you once before your browser is screwed up, try webtv and you won't miss a thing :)"

Why does it appear to be exclusively populated by CBers from the USA?

"Hmmm, let's see. Could it be because residents in the states own more computers than any other country in the world? Or maybe because we have more internet servers? Huh? Y'a THINK? Geez!"

With that in mid, wouldn't uk.rec.radio.cb be more appropriate to post the for sale ad of an "export" radio?

"With WHAT in mind?"

Or any of the half-dozen CB international newsgroups where non-USA folks hang out?

"Maybe. But it's legal and bunches your panties so we keep doing it."

(Of course we

"Becareful of that "we" thing. It got you caught before."

know that NO ONE in rec.radio.cb the USA is interested in buying such a radio as the one he's selling, right?)

"We all have friends around the world. We are always looking for new radio equipment for them, and for ourselves to experiment with, of course."

□□□

Assumption #1: It is not my job to enforce the law.

Seems strange that when certain individuals are not here for a while, an
entire group disappears(anti's). Or then again, maybe it's just the
beer......

This perpetuates a common myth

"Oh, THAT phrase again."

in rec.radio.cb, namely that there is only "one" person

"Here you go. You sling more bullshit than ranch in the spring. No one
has EVER suggested it was one person. And here you are attempting
another failure the of power of suggestion."

in all of Usenet who disagrees with illegal CB. The illegals think that
if they can just find

"Here is where you go rabid. The only ones obsessed with who is who is
you. And Sparky, he wants addresses. Oh, and Dogie and Leland, they
offered rewards for information on me and tried to blackmail the group.
Sparky even tried to start his own cb group awhile back, but it had no
radio talk in it, so everyone left and came back here."

and eliminate this ONE person, then there will never be a word said
against illegal CB again, ever.

"Rally all you want about legal cbs. No one will think any less of you,
it really isn't possible. Stop mistaking the debating of communication
laws pertaining to cb as a personal affront and you will be ok. Really."

Surely any intelligent person can see through this myth

"They see through you."

as nothing more than a combination of wishful thinking and egocentric
fantasy.
By the way, the chief believer in this "lone gunman" theory is our
resident nutbag, Twistedhed.

"I knew you couldn't get through it without paying homage to your radio
God, Leland. Thank you, my son."

Assumption #1: It is not my job to enforce the law.
Response: It is my legal right, moral responsibility, and independant
choice to enforce any law I see fit to enforce. But I am not enforcing

Save the sarcasm, Jim. WE know that YOU know that what was meant was
27.405 in the CB band, and not 900 Mhz. This *is* a CB newsgroup. Do you
think we REALLY meant to imply anything above 27.405 is illegal?
No. Of course not. But since you have taken on the role of defender of
the guys who sell amps

"Right there pal, like the tattoo on yer forehead that has a giant "T"
on it. Like I been saying all along, anyone, anyone at all that
questions or disagrees with the nocoders aliases are immediately
branded. Mighty familiar. Hint: 8 faces, Kansas City radio, federal
lawbreaker."

and wedge alternators under the hoods of Chevy Suburbans so they can
blow the locals off channel 6, then we might as well keep posting our
reminders of what is legal and what is not.

"Go ahead. No problem there. The problem is with your arrogance as
demonstrated above. Someone took issue with one of your posts so your
first defense is an attack in the form of a lie. This means your
argument (whatever it may be) concerning cb law is weak at BEST, and can
not survive a finely honed and scrutinized debate."

All who have engaged Twistedhed in 'conversation' know the fundamental rule he operates by. He says whatever comes into his head at the time, no matter if it is true or not. If asked to prove it, he either makes up another lie, makes up a reason why he can't answer, or pretends that he never made any such claim in the first place.

This time, he claims that the identities of the troublesome (to him and his cronies) anti-illegal CBers are known "to all".

<<"They have been identified numerous times. Was a time they was braggin' on each other.">>

But when asked for proof...

<<Hey Twist. Why don't you post some proof that proves who they are. >>

He does a sudden "twist"...

<< "Funny thing is, you keep asking for more and give no answers when they are posed to you. I know the type. You wear it well. Tune in the early AM EST in the morning. Chao!" >>

There you have it. Poor Twistedhed. He labors under the delusion that some gang of clowns on a little pirate CB frequency actually affect people all over the universe.

ATTENTION TWISTEDHED: Blather all you want into the airwaves. No one is listening. Even if anyone wanted to (which is unlikely) they couldn't hear your insane mutterings.....

Dennis,

The 10 meter band is assigned to the Amateur Radio Service, and requires a
license. Some of the 10 meter stuff *can* be modified to operate on 11
meters, but is illegal. I would not attempt to operate on 10 meters without
the
required license. The "man" is aware of unlicensed operation up there now
by
renegade truckers and has already come down on a couple of trucking
companies because of it.

If you are attempting to claim that these amps are intended to be
"experimental and not used to transmit on CB with", then don't even
bother.

> and are used in medicinal research and technology as well,

Please provide some proof of how "mobil amps" such as the ones Train
sells are used in medicinal research and technology. Perhaps a
research facility or hospital name.

> no license or
> special skills needed to experiment and learn.

A broad statement that does not justify illegal acitivity.

> The only illegality
> concerning said devices is the manner in which they are employed.

Wrong. I have provided references to FCC law that state the contrary.
The CB amps in question are illegal to sell, promote, distribute, and
use.

> While
> speech content of actual illegal and/or illicit acts do indeed take
> place in many facets of society, simple speech in and of itself is
> totally free and should remain as such until evidence suggesting
> otherwise is set forth in a court of law.

The issue is not "free speech". The issue is a violation of ISP rules
that specifically prohibit using the service for illegal purposes,
i.e. selling CB amps. Please re-read the Terms Of Service excerpts
from Optonline that I conveniently included in the original letter.

>What is amazing is the ability of A2 to clear a CB channel in the NYC area.
>Man, that is one phenomenal Roger Beep.
>
>Dick Nï¿½BK

Hi Dick,

I have to say, ch. 14 (27.1250MHz) is not too crowded around here. We get some AM traffic in the evening, but at around 8a.m. it's relatively clear. We've done a little work in the evening and even when some adjacent channel interference "splashed" over, we could still discern the tones from the QRM. (That was the amazing part. Channels 15 through 17 are popular FM frequencies around here ...I know, I know.) If we hear a conversation taking place, we go phone and move to another frequency/channel. I just picked up an old Turner J+350 to go along with the Signature, Jr.; it gives it that nice older look. Both items are NOS and contrast the more modern gear nicely. Yeah, this is the only "Roger Beep" that I can say that I like.

73 de Bert
KC2HMN

P.S. One day, I'd like to restore a nice 11 meter tube set. Perhaps a Browning...I've heard that "real radios glow in the dark." :-)

We assume you are not a general class ham ticket holder by the nature of your question and your use of the term 'homebase'. JUST A REMINDER: 28 - 29.7 is a ham band. There is no country where CBers are permitted to transmit there.

Um...what is SSB and what is the Rubber Duck? How do I get a radio with 8 watts? I thought the FCC regulates and 4 watts is the max. Unless there is a way to increase wattage, which would be great if it can be done.

Thanks

Hi Bert,

This reply is in the best of spirit also. To help answer your
question, I must pose a similar question of you and the group. What do
you think Train's purpose is, and what does it appear he might want to
accomplish here on rec.radio.cb? I have provided a number of posts of
his where he openly promotes illegal cb and even offers to sell
illegal gear. To me, his agenda is obvious and clearly stated, which
is to break FCC law, and to promote the breaking of FCC law.

I am simply an alternative voice to that agenda. Since people like
Train do not seek any "middle ground", neither do I. I employ the
same methodology that those who oppose legal CB use.

My purpose and what I want to accomplish is best expressed by Sparky
and the Anti-KeyClown movement. Perhaps it is easiest to post their
FAQ here below.

I will be glad to answer further questions, provided they are serious
ones that pertain to this topic.

-Aaron-

Q: What is a KeyClown?

A: A 'KeyClown', in a nutshell, is a CBer gone bad. The name is
derived

from the term 'keydown', which is the equivalent of a dragrace using

illegal radio amplifiers. A keyclown can be recognized by his or her open

and public disregard for FCC regulations, total disrespect for other CBers,

and hostile aggression towards any form of criticism.

Q: What is an Anti-KeyClown?

A: An 'AntiKeyClown' is a legal CBer that actively confronts keyclowns on

their own terms. Disrespect is countered with disrespect, hostility with

hostility, etc. Any method or tactic used by the keyclown to harass legal

CBers, intimidate proponents of legal operation, or dominate either the

Citizen's Band or any other aspect of legal CB use, will be considered a

fair and viable method or tactic for use against the keyclowns.

Q: Are the AntiKeyClown posts actually all the work of N8WWM? Or Sparky? Or

Leland? Or...?

A: There are many AntiKeyClowns. Each Anti takes upon him or herself the

role that is best suited to their talents and abilities. While one Anti may

choose to remain 'behind the scenes', another will perform their duties as

a spokesperson. Some wish not to be indentified, while others enjoy the

freedoms of full exposure. An Anti need not identify him or herself as

such, and may make only a minor contribution to the effort. This describes

the majority of the AntiKeyClowns. Only a few have choosen to be visible.

Q: Why do you hate illegal/outlaw CBers?

A: AntiKeyClowns are not about hate. An Anti is typically a person that has

been offended, disturbed or victimized by the actions of keyclowns, and has

chosen to take action instead of accepting defeat at the hands of outlaws.

Q: What do keyclowns do?

A: A keyclown generally ignores two important laws:

The first is by using radio frequency amplifiers with their CB radios.

These amplifiers are usually of poor design and construction, and will emit

powerful harmonics. These harmonics, or "splatter," interferes with

broadcast radio and television, as well as other legal radio communications

such as police, fire, ambulance and aircraft communications. It also

disrupts the Citizen's Band on other channels, making the channel or band

useless for several miles within the radius of the keyclown. Many times

this disruption is done with the deliberate intention of "shutting down"

legal CBers.

The second law involves the use of frequencies that are outside of the

Citizen's Band, and can even intrude on the 10 and 12 meter Amateur Radio

bands. The primary reason for doing this is because people like themselves

have made the legal channels useless in their area.

The behavior of keyclowns, if left unchecked, may eventually lead to the

elimination of the Citizen's Band altogether. As the number of keyclowns

increases, so will the need for more bandwidth and more power. This is a

"king of the hill" mentality, and anyone that operates legally gets thrown

off the hill. At some point in the future the keyclowns may become so loud

and disruptive that the only way to stop them will be to 'clear the board' by

shutting down the Citizen's Band completely. We would like to prevent both

from happening.

Q: So why don't you just make your point and then go away? You're being

"rude" by contantly poking your nose where it doesn't belong.

A: The Anti's believe in the Golden Rule.

Q: But you're just riling up the illegals and making them angry. That's not

being a responsible person.

A: Their actions and emotions are not our responsibility.

Q: Why don't you go back and clean up your own mess on the ham bands?

A: The AntiKeyClowns have nothing to do with the Amateur Radio Services. It

is true that some of the Anti's are hams, but it is also true that some of

the keyclowns are hams as well. Amateur Radio has no more relevance to this

subject than does saltwater fishing.

Q: But I'm a ham and I don't care what goes on on CB.

A: You should. Every year the "CB problem" gets worse, not better. More

phoney export radios are flooding the market. More freebanders and confused

truckers are showing up on 10 meters. We guarantee that if nothing is done,

amateurs will be unwillingly "sharing" the 10 and 12 meter bands with

illegal CBers in a very short time. And with the increase of illegal amps

splattering into your home entertainment systems and other consumer

devices, this is an issue that needs to be addressed not only by CBers and

hams, but also by the general public.

Q: I support legal CB, but I do it quietly.

A: As stated before in this FAQ, each person will do what they feel is best

for them. However, illegal radio operation is making the radio spectrum a

very noisy place. In time, your quiet legal radio operation will be

silenced by the keyclowns. This is what the Anti's see in the very near

future, and it is what we are trying to prevent.

Q: You can't stop people from posting. It's perfectly legal to talk about

illegal CB.

A: It is not our intent, nor can we prevent anyone from excercising their

rights under the 1st amendment to the US Constitution.

Q: So why don't you go to a CB coffee break and harass people?

A: Our methods are diverse, but legal. We have noted the hostility of many

of these illegal operators, and any attempt to provoke a group with another

group would probably incite large-scale violence. Violence is not our

intent, and would not benefit anyone. We would prefer to stand at a

distance and collect information that can be used by the proper authorities.

Q: But I thought the law said I can own an export radio.

ï¿½

A: The FCC has issued a reminder about those HF transceivers

ostensibly marketed for "amateur" use but actually designed and intended

specifically for the so-called "freeband" radio operators who operate

primarily in the 26 to 28 MHz frequency range. This notice, as well as all

other FCC related material my be found at www.fcc.gov.

Q: Why can't I sell my CB amp or export radio on the newsgroup?

A: We cannot provide any legal advice except to suggest that anyone

interested should read the FCC regulations. If you are in doubt as to how

those regulations apply to you, consult an attorney, or email the FCC and

they will provide a quick and authoritative answer to your question.

Q: But illegal CBers are just "bending the law." These laws are trivial.

A: The laws that are being "bent" can result in fines up to $75,000 and up

to 1 year in prison. The punishment is not trivial, nor is the crime.

Q: The FCC doesn't enforce these laws, so why should I bother to obey them?

A: The FCC's recent lack of enforcement is no reason to think that they

cannot enforce these laws at any time they please. That is a decision to be

made by the FCC, not the AntiKeyClowns.

Q: Illegal CB is civil disobedience. Like the Minutemen did during the Revolutionary War. Or Rosa Parks during the Civil Rights protests.

A: We are, and always have been, open-minded to any argument providing

moral justification for this illegal behavior. Unfortunately, no one has

provided such an argument.

Q: CB is CB.....legal or not!

A: Here's an analogy. A hunter is one who follows hunting laws. Once he stops following the laws he is a poacher. A CB'er is one who follows CB regulations. Once he stops following the regulations, he is a pirate.

Q: Are you flamers? Trolls?

A: Yes and no. We flame and troll as necessary. Keyclowns are the only

targets, and only keyclowns that have previously trolled or flamed others.

Q: But you're screwing up the newsgroup.

A: Keyclowns have been "screwing up" the Citizen's Band for several years.

We exist as a consequence of their behavior. Please do not confuse 'cause'

(the keyclowns) and 'effect' (the AntiKeyClowns). Without keyclowns there

would be no AntiKeyClowns.

Q: Your anti-illegal CB postings are useless.

A: Perhaps. Perhaps not.

Twistie Who are they?

"They have been identified numerous times. Was a time they was braggin' on each other."
==========
Who has identified them? They have told you a name and you guys have ran with it.

"Nah. You must be just tuning in. Provide me with a valid email (you know what I mean) and I will be glad to give ya' all ya' can handle. The ng don't deserve to sit through another trial when the suspects were already tried, convicted, and sentenced."
xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx
Why don't you post some proof that proves who they are. Not who they said they were and who you think they are from what they have said, but some actual proof that someone has gotten from an ISP or an email stating exactly who they are. Hell someone said its easy where is the info!

"Funny thing is, you keep asking for more and give no answers when they are posed to you. I know the type. You wear it well. Tune in the early AM EST in the morning. Chao!"
==========
Twistie, You have been asked numerous times for proof of your allegations, You have provided none. I know your type dance around the question. For your information the question you say I havent answered was not even comparable

"By whose merit? Yours? Arrogance catching? I place more merit on why you dodge a question about alleged linear use and interference than I do explaining to you something that you already know good and well is true. It's simple. You are soooo certain who it isn't..how? Tell me that."

to what I am asking you. I didnt make any accusations or accuse anyone unlike you.

"Sure you did. You made the accusation my accusation was wrong. Several times. I asked how you can be certain and you still have failed to provide an answer."

I was telling you a story about a neighbor. and if you would look hard enough at my posts you will see i did answer your question about my neighbor bleeding 10 meters. The 2 arent even close.

"They are."

You accused someone with no evidance,

"You said I am wrong with no evidence."

I was telling a story about a local that you want to tell me how to solve a bleedover problem. Not even Close. But as usual you DUCK! The question and more importantly the REAL Answers.You are a real DUCK. Since I did answer your question how about answering mine.

"Quack Quack."

Assumption #1: It is not my job to enforce the law.
Response: It is my legal right, moral responsibility, and independant choice to enforce any law I see fit to enforce. But I am not enforcing -- or breaking -- any law by posting in this newsgroup.
Assumption #2: I get upset about the law being broken.
Response: I do not get upset about any CB law being broken. On the contrary, the more RF pirates that break the law the better.
Assumption #3: The breaking of the law does not directly harm me, a friend, or a loved one.
Response: RF pirates affect me directly in my work.

>length does not affect SWR.

Oooh, hey, you found a website. Good for you. But you are still lost
on the point that nobody said changing the length of the coax would
change SWR. What it -does- do is to change the point where the radio
meets the standing wave, which can give false SWR readings at the
radio end of the transmission line.

You -are- the type, twist. You haven't been able to back up a single
one of your lies... er, allegations since you began posting. Instead
you pick apart the other person's post almost letter by letter and
make stupid sarcastic remarks. For a journalist with a "passion to
educate the public", you are sure doing a piss-poor job. BTW, what are
some of those publications you write for? Or is that just another one
of your lies? As a journalist you probably know that it doesn't matter
for beans what you say unless you have something substantial to
support your opinions or conclusions. In fact, a journalist isn't
supposed to make the conclusions, but objectively deliver the facts
and let the readers make their own conclusions. So where are the
facts, twist?

An Anagram, as you all know, is a word or phrase made by transposing or rearranging the letters of another word or phrase. The following are exceptionally clever. Someone out there either has far too much spare time or is deadly at Scrabble.

George Bush: When you rearrange the letters: He Bugs Gore
Dormitory: When you rearrange the letters: Dirty Room
Evangelist: When you rearrange the letters: Evil’s Agent
Desperation: When you rearrange the letters: A Rope Ends It
The Morse Code: When you rearrange the letters: Here Come Dots
Slot Machines: When you rearrange the letters: Cash Lost in Em
Animosity: When you rearrange the letters: Is No Amity
Mother-in-law: When you rearrange the letters: Woman Hitler
Snooze Alarms: Wen you rearrange the letters: Alas No More Z’s
A Decimal Point: When you rearrange the letters: I’m a Dot in Place
The Earthquakes: When you rearrange the letters: That Queer Shake
Eleven plus two: When you rearrange the letters: Twelve plus one
President Clinton of the USA: It can be rearranged into: To Copulate he finds Interns.

A.K.A. "G-Man" on AM, 551 Chicago on SSB.

Check out the MFJ-250X. It is less expensive than most antennas and will provide a smooth, flat SWR 1:1 across the band. For sure you will be able to work every station you can hear. Further, in many years I have never had even a single TVI/RFI complaint.

Enjoy!

Here is a link.

Okay Aaron,

I think we can work with this. Your reply was pretty lengthy, but I certainly read it in full and can understand some of your points and the frustrations behind them. I'll try to address some of your "Q & A" points and see if we (as a group) can't find some sort of "middle ground."

>What do
>you think Train's purpose is, and what does it appear he might want to
>accomplish here on rec.radio.cb? I have provided a number of posts of
>his where he openly promotes illegal cb and even offers to sell
>illegal gear. To me, his agenda is obvious and clearly stated, which
>is to break FCC law, and to promote the breaking of FCC law.

If what you say is true, I'd say Train's purpose is to make money. I've been in the "game" for over twenty years and I can honestly say I've never met an amp builder or "export" radio retailer who wanted to promote the breaking of any laws. Does that make it right? No! However, there are those whose occupation it is to address this issue, they too do this to make money.

>I am simply an alternative voice to that agenda.

I respect that. I may not agree with what you have to say but I'll certainly defend your right to say it.

>Since people like
>Train do not seek any "middle ground", neither do I. I employ the
>same methodology that those who oppose legal CB use.

I don't think two wrongs make a right. If somebody burglarizes your home, you don't go and rob their's. You report it to the appropriate authorities. I understand that you would like to harass them and disrupt their comms on the NG, much in the way that they disrupt yours, mine, and other "legal" CBers. However, think about this, you end up disrupting my, as well as other "legal," comms on the NG. When I enter the NG, I don't want to wade through multiple posts filled with profanity any more than the next guy. You end up becoming the very same "disruptor" that you've set out to discourage, just on a different medium.

>Q: Are the AntiKeyClown posts actually all the work of N8WWM? Or
>Sparky? Or
>
>Leland? Or...?

Quite frankly, I never really cared whether it was one person or multiple posters. I personally couldn't care less if you carried on a ten way discussion and played the role of each poster as long as the message is valid.

>Q: Why do you hate illegal/outlaw CBers?
>
>A: AntiKeyClowns are not about hate. An Anti is typically a person
>that has
>been offended, disturbed or victimized by the actions of keyclowns,
>and has
>chosen to take action instead of accepting defeat at the hands of
>outlaws.

Here's where we hit paydirt! It appears that what you're trying to accomplish is vengeance aginst those who've "offended, disturbed or victimized" you. I was originally under the impression that you were actually trying to discourage others from further engaging in illegal 11 meter activities.

Quick story. (I promise) When I first decided to become licensed and earn my Novice ticket, I went to the local ARC to research the requirements. To make a long story short, once they found out that I was a CBer, (Nevermind that I was neither a freebander nor used an amp.) they treated me like crap...with a capital S! This resulted in a severe case of th "kiss my a$$" attitude from yourd truly. "Screw them" I said, but you know who I really screwed...ME! They couldn't care less, but I lost precious time with which I could've been "on the bands." Just something to think about.

>Q: What do keyclowns do?
>
>A: A keyclown generally ignores two important laws:
> The first is by using radio frequency amplifiers with their CB
>radios.
>These amplifiers are usually of poor design and construction, and will
>emit
>powerful harmonics. These harmonics, or "splatter," interferes with
>broadcast radio and television, as well as other legal radio
>communications
>such as police, fire, ambulance and aircraft communications. It also
>disrupts the Citizen's Band on other channels, making the channel or
>band
>useless for several miles within the radius of the keyclown. Many
>times
>this disruption is done with the deliberate intention of "shutting
>down"
>legal CBers.
>
> The second law involves the use of frequencies that are outside of
>the
>Citizen's Band, and can even intrude on the 10 and 12 meter Amateur
>Radio
>bands. The primary reason for doing this is because people like
>themselves
>have made the legal channels useless in their area.

I agree with you, there's really nothing I can offer to dispute this. Now rethe words channels and frequencies with newsgroups; and keyclown with AntiKeyClown;

and so on...get the picture?

>The behavior of keyclowns, if left unchecked, may eventually lead
>to the
>elimination of the Citizen's Band altogether.

Like I said, freebanders and what you describe as "keyclowns" have been around as long as CB has existed. In the words of George Carlin, "The earth's <band's> not going anywhere...we are folks!" Give it some thought. You make a well thought out statement but it doesn't actually seem to be lessening the problem, quite the opposite. Take it easy.

Hello Richard: Thanks for the vote of confidence, in this type of field, who really knows what happening! The guy who could see the energy radiating, they nailed to a cross!

I have the seen the Andrews guys set up a low dollar, predictable (in their words) antenna system, and then half to spend days looking at it, making measurements with a Network Analyzer for SWR, and Spectrum Analyzer for field strength. As tools where thrown at fellow workers and such I could tell from my years of experience, that things weren't working as advertised.

They did not have a analytical SWR or field strength values in hand, so field measurements had to be compared to ham radio type dipoles, for reference antennas. Being a avid CB'er I offered help and advice which was rejected on the spot, maybe I shouldn't have told them that I am a super CB'er?

Anyway the boys finally got it all working as they where told how it was supposed to work, from their engineering group, back east!

The point here is that every time I get into a antenna project I approach it cautiously full well knowing I don't know whats happening until measurements are made. And even then nature can throw you a curve!

Jay in the Great Mojave Desert.

I'm sure. Part of growing up is accepting responsibility for your mistakes. I should've let it slide right off my back but I was young and it had a polarizing effect. The best I can do now is share the experience and possibly help others avoid the same discouraging fate.

>What do
>you think Train's purpose is, and what does it appear he might want
to
>accomplish here on rec.radio.cb? I have provided a number of posts of
>his where he openly promotes illegal cb and even offers to sell
>illegal gear. To me, his agenda is obvious and clearly stated, which
>is to break FCC law, and to promote the breaking of FCC law.

<>

Yes, agreed, a thief who steals someone's wallet does not intend to
promote thievery, they simply need the money. Should we not
uneccesarily burden thieves and criminals with ideology they might not
subscribe to?

Regarding Train being motivated simply by money, I disagree. See
below.

>I am simply an alternative voice to that agenda.

<>

>Since people like
>Train do not seek any "middle ground", neither do I. I employ the
>same methodology that those who oppose legal CB use.

<>

Where there has been a crime (selling illegal amps) it has been
reported. However promoting illegal CB in a NG is not a crime. By the
same token, posting alternate viewpoints that disagree with those
promoting illegal CB in a NG is not a crime. I do not agree that
legal CBers must refrain from speaking up and voicing opposition to
illegal CBers because it may be "disruptive to the group".

<< I
understand that you would like to harass them and disrupt their comms
on the
NG, much in the way that they disrupt yours, mine, and other "legal"
CBers.

However, think about this, you end up disrupting my, as well as other "legal,"
comms on the NG. When I enter the NG, I don't want to wade through multiple
posts filled with profanity any more than the next guy. You end up becoming the
very same "disruptor" that you've set out to discourage, just on a different
medium.>>

My intent is not to prove who is more righteous. The illegals don't care about what is "right" anyway. They don't care about anyone's comfort or discomfort. They care only about their ability to pursue their illegal CB hobby or business being lessened.

I am sorry to disagree with you on this point, but all you need to do is read Train's own posts (which I conveniently attach). The author does not seem to be a person who cares only about "profits".

darn it........I have newsranger blocked and missed this post so I'll address it now...........Eat shit and die! Who sells what or who's buying is
of no concern to you.......You just need a reason to cry like the little
child you are. Grow up! Your little click isn't going to even put a dent in
what gets sold for CB radio legal or otherwise.
Being in radio as long as I have and knowing the people I know........It's
going to be a long long time before slime like you will ever be able to do a
damned thing to anyone selling radio stuff. I have more radio info on CD's
and a larger database than most of you clowns would ever dream of and if
need be ALL WILL BE PUT ON A WEBSITE. Everything from schematics for amps
that we were building in the 70's and 80's to every last page of master
editions.....secret cb.....green, gray, black books.........You name it and
I got it. Nothing you sleazy little shits can do will EVER stop people from
getting information they need. Bet on it!

Subject: MOBIL AMP SALE
Date: Sat, 14 Apr 2001 19:09:40 GMT
From: "Train"
Newsgroups: rec.radio.cb

As a public service to the NG, I will be offering to sell mobil amps to
those wishing to buy them. This is not done out of greed but out of
necessity to thwart the losers in the NG who think they have taken over OUR
nice little group and can use it to harass and belittle as they see fit. To
offer sale of these items is just the thing needed in a public forum to mess
with these nil-minded simpletons. Amps such as Texas Star, Palomar, Cobra,
Messenger, Gray, Galaxy, X-Force and so on. These will be sold for a limited
time and at a VERY small profit IF ANY !

This is not a money thing so much as it is an access thing.

Since these self appointed radio/computer gods have declared knowledge an
illegal thing also, I might just make the entire Secret CB book series
available on CD along with a CD of amplifier schematics for base and mobil
amps. Why is it that when these morons just think they are getting somewhere
in their fight somebody like me comes along and pisses on their parade?
BECAUSE THEY NEED IT AND DESERVE IT!!!!!!!!!

E-Mail me with your needs......

Sorry, no paydirt. If my goal was vengeance then there would probably
be more efficient and selective ways of accomplishing that goal rather

than debating legal/illegal CB on Usenet. However, I assure you my purpose is not vengeance. It is simply, as I stated before, to provide an alternate voice to the illegal propaganda in this NG. Unfortunately, to be a truly effective alternative, the alternative has to be as loud and as strident as what it is opposing.

Quick story. I have communicated with many of the vocal defenders of illegal CB here in the NG. In every case where the person was a ham, they invariably told me of an incident in their past when they were treated poorly by an amateur or potential Elmer because of their "CB" interests. This incident affected their attitude about the radio hobby to a great degree. Their subsequent embrace of pirate CB seemed motivated by vengeance toward 'stuck up' hams and rules in general. In relating this I make no judgements about you, Bert. This is just something to think about.

<
not going anywhere...we are folks!" Give it some thought. You make a
well
thought out statement but it doesn't actually seem to be lessening the
problem,
quite the opposite. Take it easy.>>

I disagree. A Google search will reveal the NG was once virtually the private clubhouse for the keydown gang and a virtual sales salon for illegal equipment dealers such as DaveMade and ExportsRUs. I take the fact that these people see rec.radio.cb as unfriendly to illegal CB (and so abstain from posting here) as a significant change and a lessening of "the problem".

Good post Aaron,

I certainly have a better "read' on your efforts now. I personally disagree with how you're going about it, but your goals seem altruistic enough. It's just a shame that the AKC multiple posts and profanity appear to have clogged the NG to the point where one needs a significant number of words, unrelated to CB, in one's filter to read the NG with any measure of pleasure. I'd rather pick and choose my topics of choice rather than have to sift through the AKC QRM, but that's just me. Thanks for the honest and friendly exchange, I appreciate it. Take it easy.

Not that I would ever use one on 11 meters, but I am just curious.

What are the differences between classes A, B, AB, C, etc.

Which ones are better?

Why are they better and what makes them that way?

How much should a really good amp cost per watt, new and used?

What is a Lincoln, and is it a good radio? Who makes it? Do I need one?

I could talk 17 miles on 4 watts, everyday, with the k40 antenna that I had
on my work van
5 years ago,
I can't find anything that will give me that kind of distance anymore, but
why does everyone tell me they are junk and to stay away from them now ??

How do you get rid of road static?

Hello Traders Haven:

I'll take a shoot at answering your question, since Mr and Mrs America are yelling and arguing a few doors down.....

Traders_Haven wrote:
>
> Not that I would ever use one on 11 meters, but I am just curious.

I have talked with some CB equipment manufactures and they believe that there are 10 to 12 million CB'ers that are active to not to active, and that the lions share do use linear amplifiers.

> What are the differences between classes A, B, AB, C, etc.

These classes of operation, really need to be looked up in a radio manual or handbook and read thru a few times. Do NOT get all wrapped around the axle if you read technical material and you don't get it the first time thru, or second, or third, it will eventually get thru to you.

These classes of operation state how much of the input signal is being amplified, as a definition in degree's of the input signals cycle.

The term "Linear Amplifier" means that the amplifier, will reproduce the input signal very well, with the minimum of distortion. So many CB or Ham radio type ah guys say "Linear Amplifier" meaning to sat RF amp, not to say the amplifier is truly linear. You will see much discussion on this.

Class A, the amplifier is amplifying the input signal all the time, or all of the input signal is being amplified, all 360 degree's. Class A is the most inefficient, but reproduces the cleanest signal. Class A amplifiers are mostly used when the cleanest reproduction of the input signal is needed. Such as audio high fidelity amplifiers.

Also should you have a large transmitting tube, say a 4CX10,000 you could use the tube in class A, to reduce the output power from requiring lead helmets being issued to all the family, to only a few thousand watts, very clean watts.

Class AB amplifiers, amplify the input signal for I believe around 120 degree's of the input signal. These type of amplifiers sound great when using AM or SSB. Tube amplifiers have a distinction as AB-1 or AB-2. Which means the tube amp with class AB-1 will not allow the Control Grid Driving voltage to allow grid current to flow. AB-2 will allow Grid Current to flow. Again you need to spend time going all over this

material.

Class B amplifiers, only amplify half or less than 180 degree's of the input signal. These class B amplifiers are used for RF, Audio, and all kinds of things. The really neat use for Class B is having two tubes or transistors in a Class B Push-Pull, meaning that when tube or transistor is off the other is on, king of like a 2 cylinder engine in a sense.

Class C amplifiers, only amplify less that 120 or is it 90 degree's of the input signal, like I said you need to look up this hoo raw up yourself. Class C is the most efficient but also the dirtiest reproduction of the all. Many RF amplifiers use Class C. The CB Battle or competition amplifiers or boxes use class C, and don't sound all that well on SSB.

There is a curve for tubes and transistors that show how the device is biased, to achieve the different classes of operations.

For tubes its called the Plate Current to Control Grid Voltage chart, and for Transistors is called or close to, Collector Current to Base Current curve. Its been awhile since I have reviewed this material. So I may have not said completely right.

> Which ones are better?

Well for AM you can use Class AB or B, or even C. But for SSB the Class AB amps sound pretty good.

FM or CW class C will work.

> Why are they better and what makes them that way?

Again you need to read about this material, yourself.

> How much should a really good amp cost per watt, new and used?

Well whats a really good amp going to do for you? What is it you want it to do?

> What is a Lincoln, and is it a good radio? Who makes it? Do I need one?

The Lincoln Radios are a very good radio, I have a few of them myself. They can cover 12, 11, and 10 meter bands.

> I could talk 17 miles on 4 watts, everyday, with the k40 antenna that I had
> on my work van 5 years ago, I can't find anything that will give me that
> kind of distance anymore, but why does everyone tell me they are junk and to
> stay away from them now ??

17 miles distance was a snap when all the skip was dead, meaning that stations will not bounce off the atmosphere creating a noisy condition.

The K40 Antenna has a internal 130 Pf disc capacitor as part of its impedance matching circuit. This is a cheap mass produced capacitor that is bought in mass production quantities. It is the weak link in the K40

design. CB'ers and Hams have burned up the K40 antennas by using too much power, which burns up the little 130 Pf disc capacitor. By replacing the little mass produced capacitor with a 1000 Volt Mica 130 Pf capacitor will fix the antenna for a lot of power.

The Wilson 1000 and 5000 antennas, have no capacitor to burn out, so a lot of people say these antennas are better. Wilson runs adds in magazines that show a 2dB increase in field strength from a Wilson 1000 as compared to a K40 antenna. Wilson says this is due to less loss in the dielectric material sounding the impedance matching coil, and the coil is made of larger gauge wire.

These antenna measurements where done at the Lockheed Antenna Range in Rye Canyon California. I am sure the boys at Wilson already knew that their antenna would beat the K40 antenna, before bringing their dump truck load of money for the Lockheed guys to measure the antennas. The Wilson Boys needed a independent antenna range to verify this for advertising purposes. I'd love to know what a Meg-O defence contractor charged for that little wrinkly?

I have used both the K40 and the Wilson 1000, and I prefer the Wilson 1000. And Wilson even says that the Wilson 5000 has even lower losses than does the their Wilson 1000 model.

> How do you get rid of road static?

What are you calling road static? And what type of noise does it make?

The best way to reduce engine noise is with a good noise blanker in the radio itself, at least this is a good start.

If you are having road noise from say tires, try driving thru the rain or a wet pavement to see if this reduces the noise. Then you may have some sort of noise from the tires or wheels?

Fixing or reducing engine, alternator, fuel pump, or engine computer noises can be a real chore. The ARRL has books on noise and interference and such.

>PS: I attribute this to a lot of book learning but not enought hands on!

Well, my "hands on" experience can be repeated by anyone willing to do
this simple experiment: Take a wavelenth of coax and send a signal
through it to an unmatched load. Measure SWR at the source and at the
load. Then shorten the coax by less than a quarter wavelength (make it
an arbitrary 3 feet for 11m) and measure SWR at both points again. The
SWR at the load will not change but the SWR measured at the source
will be different than the first measurement. This happens every
single time without fail.

I have posted this before, but it seems nobody bothered to do the
experiment for themselves. Most every text book on the subject will
say the same thing: measure SWR at the base of the antenna, not at the
radio. If there is another book that says any different, or if anyone
can describe any condition where the experiment doesn't work, I would
be very interested in hearing about it.

>Not that I would ever use one on 11 meters, but I am just curious.
>
>What are the differences between classes A, B, AB, C, etc.

Class A amplifies 100% of the cycle. It will give the least
distortion, but is not very efficient. It can be used as a linear
amplifier.

Class AB amplifies 51 to 99% of the cycle. Class AB is more efficient
than Class A. Since the wave is symmetrical, only half of the wave is
needed to reproduce a full cycle, so in a push-pull configuration it
can be used as a linear amplifier.

Class B amplifies 50% of the cycle. Class B is more efficient than
Class AB. In a push-pull configuration it can be used as a linear
amplifier. But since Class B requires very tight voltage regulation
and biasing, it is usually preferable to run Class AB close to 50%,
which is nearly as efficient as Class B but with fewer hassles.

Class C reproduces less than 50% of the wave. It is more efficient
than Class B. It cannot be used as a linear amplifier because more
than half of the wave is chopped, resulting in severe distortion. It
requires a tuned tank circuit on the output.

>Which ones are better?

That depends on what you need it for. Most audio amps run Class A for
low power and Class AB P-P (push-pull) for power. Most linear RF amps
run Class AB P-P. Class C can be used for AM or CW.

>Why are they better and what makes them that way?
>
>How much should a really good amp cost per watt, new and used?

Quite a bit if the amp is capable for use on 11m. Please note that
selling, or even advertising for sale, an amp that is capable of
working on 11m is illegal. So if the buyer gets swindled there are no
legal means to correct the deal. Also, the fines for using one on 11m
can be very high -- we're talking thousands of dollars -- so there are
other costs other than the greenbacks that are traded for the amp.

>What is a Lincoln, and is it a good radio? Who makes it? Do I need one?

There are literally thousands of different CBs available, new and
used. Some are great and some are junk, but most do essentially the

same job. If you want something better, talk to others and find out what they have, how long they have had it, and why they like it. If it works for you, go for it. Never buy anything unseen. My suggestion: Quality is in the radio, not the knobs. Find a radio with low noise, good sensitivity and good channel seperation (that's not as easy as it sounds).

>I could talk 17 miles on 4 watts, everyday, with the k40 antenna that I had
>on my work van
>5 years ago,
>I can't find anything that will give me that kind of distance anymore, but
>why does everyone tell me they are junk and to stay away from them now ??

If it works the way you want it to work, don't fix it.

>How do you get rid of road static?

Check to make sure that it really is road static. If it is, shunt the antenna to ground with a 4 to 10 uH (microHenry) choke. It is best to do this at the base of the antenna, but you can also do it inside the radio.

I have stated more than once (and twistie repeats me regularly) that
RF pirates affect my work directly. Regardless, the motivations are
irrelavent if the argument is valid.

<snip>
> Like I said, freebanders and what you describe as "keyclowns" have been around

RF piracy, by that or any other name, is theft of public property,
pure and simple. I have as much respect for them as I do for any other
common thief. There is no doubt that RF piracy will continue, just as
other crimes will continue. People will be people, and there will
always be a contingent that will have no respect for others in
general. But that does not mean that the actions of these people
should be acceptable simply because they will never go away.

At any point in time there may be a majority of people in this
newsgroup that prefer to ignore federal laws. This "group-think",
"group perception", or "mob mentality" can be a powerful influence on
any individual, and there are many individuals that read this
newsgroup. Any encouragement to break federal laws may or may not be
intentional, but it will be present as long as there is unchallenged
discussion in support of RF piracy.

While these people may hold the majority of this newsgroup, that does
not make their discussions of illegal behavior 'right'. They do not
represent the majority of people to whom these laws apply, but are
only a small minority in that respect. While I make no claims to be
representative of the public majority, I do not see any reason to
compromise the content of my posts simply because my opinions are not
shared by this newsgroup's majority.

If someone doesn't like my posts, they don't have to read them. Consider that most newsreaders have filters. For that reason, I only post with my email at the top. Once in a while I will change my header to get through someone's filter, but not often. Regardless, if you look at the posts as of late, most of the spam and profanity is coming from the "keyclowns", not the "anti's". Also consider that we all have to wade through the posts to find the ones of interest. That's just the way some newsgroups work.

Most ISP's address newsgroup behavior in their TOS. One of the common phrases regarding trolls is "it takes two to tango". In other words, don't lay any blame on Voobner, Doug, Leland, or any other "anti" without laying equal blame on those that respond to them. I haven't seen any posts asking any of the "keyclowns" for some sort of compromise...

There is no one who ever worked in any technical field that has not been hip deep in a problem only to have someone wander up and say 'why is that resistor burned, mister?'

Part of it is that to make any sense out of much of anything you ultimately have to produce a model of the problem, how it should work, and compare and analyze against it. And that is fine so long as you know the limitations of the model and do not take the position that Moses dragged the model down the hill at Mt. Sinai.

While the engineering types do tend to fall in love with models (since Cheryl Tiegs they've all been Elsie the Cow) you do have to admit that the average CB antennafest resembles the old Republic Tarzan movies where they grabbed six guys off the street, put them in grass skirts and told them to dance around a fire and chant. Ugga-bugga, Ugga-bugga. This is not a match made in heaven.

Class C cannot be used for AM!!!! I think you meant FM; I hope you meant FM.

There is some definitional controversy about Class C. You are correct in that any bias beyond cut-off makes it Class C but as a practical matter, some form of self-biasing is used to square up the waveform. It is this purposeful distortion (the waveform is screwed up anyway) that gets the efficiencies for which Class C amps are noted. Lot of BS floating on this subject.

Fair enough Sparky. I really wanted to understand the motivation behind the posts. Like you said, the filter can be employed and I have an ever growing list of words in it now. (As well as every profane word I can think of.) I just thought there might be a possibility of reaching some semblence of an understanding or truce but that no longer appears to be possible. At the very least, I've a better read on your efforts. My own efforts strive for the same ends, but employ vastly different means. Take it easy, Frank.

Hi Moparholic,

There's a mint Browning on ebay right now starting at $375.00, and it's a beauty! I just spent my "slush fund" rounding out my Turner mic collection as well as a NOS (...and I mean brand spanking new!) President Madison circa 1977 so I can't justify the additional outlay. Three months ago I would've jumped. No amps for me though, but I did notice that many of the major "brand names" actually made matching amps back then, Browning, Swan, Heathkit, Hallicrafters, etc., and ostensibly for CB...until they got clamped down on, that is. There are a few museum sites that show some really nice shots of the older rigs, I'll try to dig them up and post them for the group. I think all will enjoy them. The only other solid state rig I'd like to snare NOS is the General Electric Superbase. That'd round out my display shelf. Next years slush fund is dedicated to that Browning or one of the Hallicrafters CB-x series. Take it easy now.

Twistie Who are they?

"They have been identified numerous times. Was a time they was braggin'
on each other."

uh,... WTF does that mean, "braggin' on each other."?

"Uh, they were chanting to the tune of "Dougie, Leland, Kari, and
yourself."

Is "braggin" another of those words you purchased but forgot to read the
instructions?
Why don't you post some proof that proves who
"I didn't say "braggin". YOU did. I said, "braggin'." I would not expect
you to know the difference and have no desire to educate you anymore
than I already have concerning radio, laws, life, electronic theory,
antenna theory, or anything else, such as how to improve the nonexistent
antenna you currently have."

they are. Not who they said they were and who you think they are from
what they have said, but some actual proof that someone has gotten from
an ISP or an email stating exactly who they are. Hell someone said its
easy where is the info!

"Funny thing is, you keep asking for more and give no answers when they
are posed to you. I know the type.'

You -are- the type, twist. You haven't been able to back up a single one
of your lies... er, allegations since you began posting. Instead you
pick apart the other person's post almost letter by letter and make
stupid sarcastic remarks. For a journalist

"Here is another of your lies. You have elevated me to journalist. I
never claimed I was anything more than an excellent word dispatcher on
paper. Thanks for the vote of confidence though, liar. The rest of your
dribble needs not be addressed since you reduced yourself to what I have
always claimed by lying. And stop sending me email."

with a "passion to educate the public", you are sure doing a piss-poor
job. BTW, what are some of those publications you write for?

"HAhahahaha! Stop it, Sparky. You still sound like a jealous little kid
that wants what the neighbor kid has but will never attain it 'case you

don't deserve it. You found one, find another. As I always said, it's always you girls so obsessed with our personal lives, simply, because you have none. HAhaha! Poor baby."

RF pirates affect my work directly. Regardless, the motivations are
irrelavent if the argument is valid.
<snip>
  Like I said, freebanders and what you describe as "keyclowns" have
been around as long as CB has existed. In the words of George Carlin,
"The earth's <band's> not going anywhere...we are folks!" Give it some
thought. You make a well thought out statement but it doesn't actually
seem to be lessening the problem, quite the opposite. Take it easy.
73 de Bert
KC2HMN

RF piracy, by that or any other name, is theft of public property,

"Whaaaa? Public property? The spectrum now belongs to the public, huh?
Of which country?"

pure and simple. I have as much respect for them as I do

"As anyone here has for you."

for any other common thief. There is no doubt that RF piracy will
continue, just as other crimes will continue. People will be people, and
there will always be a contingent that will have no respect for others
in general.

"Like you. Also like you, one that must get personal when their debate
arguent is shot full of holes."

But that does not mean that the actions of these people should be
acceptable simply because they will never go away.

"Your actions AREN'T accepted. You lost ynn, did you not?"

At any point in time there may be a majority of people in this newsgroup
that prefer to ignore federal laws.

"What is your comment regarding Leland's post seeking to circumvent and
IGNORE federal law?"

This "group-think", "group perception", or "mob mentality" can be a
powerful influence on any individual,

"Ha! Only on the weak. People like me watch you and your three pals play
Walter Mitty of the cb and hammie airwaes and howl with gratification."

and there are many individuals that read this newsgroup. Any
encouragement to break federal laws

"Here comes your bullshit you sling so well. No one ENCOURAGES it you boob. Simply talking about it burns your chaps so you pretend it is something it isn't. I said it to you 6 months ago junior, and I'll say it now, you'll NOT control the speech of this ng., no matter how you carry on."

may or may not be intentional, but it will be present as long as there is unchallenged discussion in support of RF piracy.

"Or your constant attack on the speech of RF theory and related items."

While these people may hold the majority of this newsgroup, that does not make their discussions of illegal behavior 'right'.

"You are in no position to tell anyone what is right. What is good for you is not good enough for me. What really chaps you is no control. You have an ego and control problem and can't do anything about it. You thought that nocode ticket was going to get you royal subjects among the cbers. Man, were you wrong. The cbers here all put your type to shame. Most people here I have found to be decent individuals. You have problems that you project onto others resulting in you being an ugly, ugly, human being.."

They do not represent the majority of people to whom these laws apply, but are only a small minority in that respect. While I make no claims to be representative of the public majority, I do not see any reason to compromise the content
of my posts simply because my opinions are not shared by this newsgroup's majority.
If someone doesn't like my posts, they don't have to read them. Consider that most newsreaders have filters. For that reason, I only post with my email at the top.

"Yea, you have posted with the home.com, home.net, supernews, ynn, then lied about it all."

Once in a while I will change my header to get through someone's filter, but not often.

"Do tell."

Regardless, if you look at the posts as of late, most of the spam and profanity is coming from the "keyclowns", not the "anti's". Also consider that we

"Damn, that great concern for everyone but you. Gee, how to thoughtful."

all have to wade through the posts to find the ones of interest. That's just the way some newsgroups work.
Most ISP's address newsgroup behavior in their TOS.

"LOL, you know all about that."

One of the common phrases regarding trolls is "it takes two to tango". In other words, don't lay any blame on Voobner, Doug, Leland, or any

other "anti" without laying equal blame on those that respond to them.

"Ha! Another thinly, albeit poorly disguised attempt at telling people what they should do, hahaha. You are entertaining."

I haven't seen any posts asking any of the "keyclowns" for some sort of compromise...

"Nothing to compromise. You pals sling it, it's coming home to roost."

I have posted this before, but it seems nobody bothered to do the experiment for themselves. Most every text book on the subject will say the same thing: measure SWR at the base of the antenna, not at the radio. If there is another book that says any different, or if anyone can describe any condition where the experiment doesn't work, I would be very interested in hearing about it.

"It just APPEARS to be changing. It isn't. It remains the same. Don't argue with me, just take my word for it. Hey Sparky, the rain is slowing, thanks for your morning contributed thoughts. I have a date with the Hillsborough River and no motorized craft on the upper portion so I can't even continue this on the air today. See ya' Monday, sport!"

Message-ID: <28546-3B472E03-52@storefull-123.iap.bryant.webtv.net>
Source record: 88117

From: voobner@yahoo.com (Aaron H. Voobner)
twistedhed@webtv.net (Twistedhed) wrote in message
The information you were supplied by
the individual is misleading at best. The devices in question

.which we can agree are "Texas Star, Palomar, Cobra, Messenger, Gray,
Galaxy, X-Force and so on"

"No. I can't agree with that at all. I know nothing of Train at all
except what I read here and that he was unfairly attacked just like the
rest of us for not taking your bullshit."

are
perfectly legal for experimentation among electronic hobby enthusiasts

If you are attempting to claim that these amps are intended

"No one but a court of law can define what "intended" legally means if
that were the case. Not you, not anyone."

to be "experimental and not used to transmit on CB with", then don't
even bother.
and are used in medicinal research and technology as well,
Please provide some proof of how "mobil amps"
"You didn't specify in your complaint anything about "mobile amps."

such as the ones Train sells are used in medicinal research and
technology. Perhaps a research facility or hospital name.
no license or
special skills needed to experiment and learn.
A broad statement that does not justify illegal acitivity.

"Not as broad as your invalid complaint to an ISP concerning freedom of
speech and that's exactly what it is."

The only illegality
concerning said devices is the manner in which they are employed.

Wrong. I have provided references to FCC law that state the contrary.
The CB amps

"Who specifically calls them cb amps?"

in question are illegal to sell, promote, distribute, and use.
While
speech content of actual illegal and/or illicit acts do indeed take
place in many facets of society, simple speech in and of itself is
totally free and should remain as such until evidence suggesting

otherwise is set forth in a court of law.
The issue is not "free speech".

"Sure it is. It is the very speech you and your
cohorts have attempted to control since Doug arrived."

The issue is a violation of ISP rules that specifically prohibit using
the service for illegal purposes, i.e. selling CB amps.

"Exactly. Who are you to mindread the intended? Even if all the
probablilty in the world existed, you can not prove their intentions.
Only a court of law can."

Please re-read the Terms Of Service excerpts from Optonline that I
conveniently included in the original letter.

"I did. The outcome shall be interesting. And thanks for a decent
dialogue without getting off topic or nasty, at least in this last
exchange."

Assumption #1: It is not my job to enforce the law.
Response: It is my legal right, moral responsibility, and independant
choice to enforce any law I see fit to enforce. But I am not enforcing
-- or breaking -- any law by posting in this newsgroup.
Assumption #2: I get upset about the law being broken.
Response: I do not get upset about any CB law being broken. On the
contrary, the more RF pirates that break the law the better.
Assumption #3: The breaking of the law does not directly harm me, a
friend, or a loved one.
Response: RF pirates affect me directly in my work.

I hope this is a joke. I'm suppoosed to have a Turner mic "in the mail." I'm so used to ebay, I didn't really give it a second thought. I hope you're wrong in this instance. :-(

Easy solution is to use the message rule feature on OE5 or a similar feature
on your newsreader to simply block cotse and other public urinals.

"No. I can't agree with that at all.

OK, it's clear you have not bothered to read the complaint in which
Train offers those specific devices for sale. It is also clear that
you are no longer in touch with reality. Have fun weaving baskets.

I guess your idea of "decent" includes promoting a club that
encourages "freebanding" (which is illegal)?

It's funny how someone else can read my post, understand it, and reply
with a concise and intelligent post of their own. You, OTOH, must tear
apart my posts word-by-word. Didn't you say something earlier about
'obsession'?

Ignore them, Bert. Those idiots do not have a clear grasp on reality. Twistie thinks I am Leland, Doug, Voobner, Glenn Sparks, and several other Frank Gillilands, including N7VCF. They have posted four different phone numbers saying each one is mine, and telling others to call because they don't have the balls to call themselves. I don't mind at all because it is such a wonderful demonstration of the keyclown mentality. If that's how they want to represent the 'freebanders', that's fine with me.

I also failed to mention that, as Jay pointed out, a Class C really
doesn't show any advantage until it is biased well below cutoff.

Hi Jay,

A person, especially a newbie, reading the statement above could get the idea that the majority of CBers use illegal amplifiers. I am sure you, Jay, would have no reason to exaggerate or misrepresent the truth, but I wonder if you might provide the names of the CB manufacturers you spoke with and perhaps a contact name at each. I would like to confirm the statement above (i.e., the lion's share of 12 million CBers use amplifiers) and also ask them a few questions myself about the industry in general. You can email the info to me at voobner@yahoo.com if that is more comfortable for you.

Hello Aaron:

Marking research is kind of a neat thing. You half to use your wit, style, charm, and pay a few bucks out for transportation and such.

Analyzing the figures, talking to different sources, and making a judgement call on certain facts is difficult at best.

Ya gots to talk with the people, get a feel for whats happening, and try to get a second and third input to round off your results. Talkin to the folks at the Keydowns and Breaks is great, you get to meet new people, see how other people solder on PL-259's and LC connectors, sample home made wine, and some back woods shine.

The hard part is the lack of origination of the all the CB radio enthusiasts. Not having any national origination that can track any type of history or any other information. So its kind of a crap shoot, mixed in with American CB Folk Lore. Meaning this makes it even harder to figure a marker base or trend.

I find the work fascinating. I wouldn't want to rob you of such fun and job satisfaction. So it would be best for you to attend one of the local breaks or keydowns and mingle, introduce yourself and have a good time of it all. Watch out for the Tennessee Hills Back Woods White Lightening, it will make you put shit back ya didn't steal. Then finding you car can a real difficult time.

I would think you need more time out. Maybe meet a CB honey, enjoy the BBQ, and again I can't emphasize enough to mingle with all the friendly people. There is so much to learn!

Good luck!

You may even want to compete and start looking for a Chevy Suburban in a short while. Just think of the success and fun you will have with all the others. I can see the flyers now......

IMO, most likely because when you touch your antenna you are in effect blocking its ability to receive signals. In effect, your body is acting as a type of insulator.

This is assuming that by your radio "dying" you no longer receive signals.

But again, this is just my opinion. Someone I am sure will prove me wrong.

Bias and cutoff are not the same thing. Bias usually determines
cutoff, which is what I believe you are trying to say. Please try to
learn the difference between the two terms.

>> >There is some definitional controversy about Class C.

I think he is referring to grid-leak or contact-potential biasing,
although there are other methods of self-biasing.

>> >It is this
>> >purposeful distortion (the waveform is screwed up anyway) that gets the

> In a zero-bias bipolar transistor CB amp there is no "self-biasing."

Nothing works unless it is biased. It can be designed to have the bias supplied to it from an external source, or it can provide it's own bias potential. In the case of griffey's muntz amp, the bias is determined by the voltage drop of the base-emitter junction.

I might point out that with a muntz amp the transistor's input impedance -- and therefore the input voltage -- is so low that a significant part of the signal is chopped before the transistor even begins to conduct. This results in a very efficient Class C P-P harmonic generator and not much else. If heavily filtered it might work for FM and CW. But since the output impedance is also very low, an efficient filter will be hard to find.

> The increase in efficiency seen in a Class C amp is not due to
> "purposeful distortion."

Yes it is.The distortion is intentionally created not for the sake of distortion, but because some types of modulation have a constant amplitude and are not affected by that distortion, such as FM. PM, CW, and some other types of pulse modulation. A Class C cannot cannot be used with any type of amplitude modulation (AM, DSB, SSB, etc.) because the modulation will swing below cutoff.

I might also add that distortion is intentionally created using similar techniques for frequency multipliers. But then it wouldn't necessarily be an amplifier, so that point is moot.

A Class AB (or, less frequently, a Class B) push-pull reproduces 100% of the cycle, half from one side and the other half from the other side. The only distortion comes from the non-linearity of components themselves.

Now before you get worked up about all those rigs that use a Class C output on AM and SSB, don't forget that the modulation is done at the RF final, and it is not working as a linear amplifier. Regardless, distortion from a Class C amp is filtered with a good (high Q) tank on the output.

That's the way it works no matter how you slice it.

>
> Dick in the hot humid mid-continent

Speaking of Cheryl Tiegs, I have called her for a social get together,
and never once has she responded to my phone calls, or radio calls on
the CB. Whats up with that? Being dumped or ignored is something I am
getting use to.

I don't really get a lot of "Ugga-bugga from CB'ers. Most of these guys
are happy to get a little help with their antennas. Although there are
exceptions.

I do get a lot of "Timba Twonga Randa-bashebee Timba Twonga Ungowhaa"
from the ham guys, at times. It appears a little knowledge can be
dangerous at times.
Threes also a lot of sharp guys out there, so I listen a lot.

But one the group that takes the cake are the professorial
Electromagnetic Anachoiac Chamber type people. The guys who do it for a
living, all the time, and of course the desk flying management doesn't
help a lot.

My point here is to point the finger at American Corporate and Management guys, and philosophy about antennas problems. After working many months on a effort, it was going no where at a very expensive rate. Man talk about "Ugga-bugga" from the management, telling that the product had to working, and getting ready for production in a very unrealistic short time, or heads will roll, ect. "Oh yeah that get everybody working together"

What was wrong is that nobody every did any real homework, or analytical figuring to see what we needed to do or where to go! The group had to realize is the basic engineering needed to be done, to make any intelligent actions that would make any money. In other words, we needed to understand that we are lost, and basic measurements need to be done to support the future actions for success.

As we accepted the fact that we where all lost, is when we started to make progress, and reorganize our efforts in a much better way.

The moral of this story is, most all antenna projects need to be looked at in a humble way. Its best to be humbol doing the ground work, than to be humboled by not doing your home work.

Jay in the Mojave

Here's a wild shot. It *may* be that you have no chassis ground to the rig
and
the radio is obtaining ground from the antenna. If the antenna mount is
loose,
when you touch it you disturb this connection which causes the radio to
quit.
Does the radio have 1 or 2 power wires (example--red= positive, black=
negative). In any case, try running a short ground wire from the radio
chassis back to the battery.

Just a wild guess.

\Jerry

You got it. Cotse was where your bozo came from. There are others but they can be added as needed to the original rule. Joy and happiness will reign supreme until you get cold feet watching your reader turn half of the days postings into nothingness.

I have yet to see anything from xg.nu, cotse.com, or newsranger be worth the sweat from one's testicles.

Nicely done, Frank. Yes, my experience is far more with tubes than bi-polar transistors so grid leak is what I had in mind although, as you say, there are other ways to skin the cat. When you drive a grid positive and current flows the electrons have to get to ground somehow or you develop a negative bias so tight the tube is lucky to conduct at all let alone draw grid current. Hence the name grid leak resistor. Because it is an absolutely necessary component, it is the most frequent way to self bias.

In Class C service it is customary with tubes to apply outside bias only to the extent necessary to protect the tube in the absence of drive and adjust the grid leak resistor to obtain about 120 degree conduction angle. By self-biasing in this manner, you both end up with a much more stable system with respect to drive level changes and tube wear but you also can drive the tube harder because the increase in bias as the tube conducts tends to

flatten the peaks of the sine wave and nip the waist of the sine wave. The actual output tends to look much 'squarer' than the input.

Frank makes a good point with respect to the 0.7 volt or so reverse bias inherent in the muntz scheme being more than it would first appear given the input impedence. It also presents a really choppy load to the driver. The two items should make the muntz design essentially useless for any amplitude varying modulation.

Good Lord, Frank, frequency multipliers? You are making me feel like an old man :-)

When you touch the antenna you become the antenna and antennas have to be cut to a specific wavelength to receive. You have probably seen this on a TV with Rabbit Ears. You touch the rabbit ears to get a better signal and when the signal is clear you back off to your seat and the signal goes to crap again. That could be one answer.
The other is that you could have an open in your base coil or the spot that the whip connects to the coil. When you touch the antenna you brake the connection and the antenna connection is cut. I don't think that is the trouble but it might be.

That's a good antenna. I used it in the November phone sweepstakes. I
received a 5x9 report from every station I contacted.
I run it without a filter and I don't even have TVI on my own set.

I remember the post fine. I wasn't ranting -- I was laughing!!! It's even funnier now that I see you didn't have the balls to put a name with the number. Then you posted N7VCF's number the same way. Was that just another number you happened to pull randomly out of a hat? Or did you just use 'the force'? LMFAO!!!!

Two, but law enforcement is not limited to making arrests. I thought
you would know better than that. Guess I was wrong.

>moral responsibility,
>
>"Talk about morals? YOU?
>HAHAHHAhahahahahahhahahhahhahaahahahahahahahahaha! After all that trash
>you hurled at cbers in here who dared disagree with you?

hmmmm..... pot - kettle - black.

> Tell us about
>your morals Frank, when you went off the Prozac for a week and accused
>all the cbers in here of being fags and MUCH much worse. Morals. Mmph."

Was that when I was Doug, Leland, Big Ben, or Glenn Sparks? Jeez, ya
know twist, I have been so many people I just can't remember them all.
Why don't you refresh my memory?

> and independant choice to enforce any law I see fit to enforce. But I
>am not enforcing -- or breaking -- any law by posting in this newsgroup.
>
>"There are laws against libel Sparky. You definitely committed libel and
>probably a few other laws, you just haven't been sued or prosecuted
>yet."

When did I commit libel? That's pretty hard to do in this ng since
most everyone uses some sort of anonymous nic. The exception might be
Landshark, but I just posted info that was available to everyone and
let them make up their own minds. Like a journalist does, ya know? Or
maybe you don't know.....

>Assumption #2: I get upset about the law being broken. Response: I do
>not get upset about any CB law being broken.
>
>"No. You get upset at me."

Probably a bit for all your stupidity. You are an intelligent person,
but you sure do say dumb things.

> On the contrary, the more RF pirates that break the law the better.
>Assumption #3: The breaking of the law does not directly harm me, a
>friend, or a loved one.

>Fair enough?
>
>"No. How was that a more comprehensive answer on how RF affects you at
>work? It wasn't comprehensive at all. In fact, it had nothing to do with
>RF or your work at all.

.......speak of the devil.

The 'comprehensive' answer was to the question, not to any of the
assumptions hidden within the question. I guess I'll have to draw you
a picture next time.

> You are not a law enforcement officer in any shape or form.

True. Did you find that out with your journalistic skills, or was it
just a lucky guess? Probably the latter, since you are still horribly
confused about my true identity. I am not an LEO, but I am a
responsible citizen. Wait a sec, I forgot, I -am- a Leo. And you
thought my birthday was back in April. What made you think that,
twist?

> How I
>operate does not affect you in any way, therefore it remains none of
>your business."

Perhaps so, but we do seem to be posting in the same newsgroup, huh?
You say what you want and I say what I want. In fact, I hope you run
your mouth as much as you can, because you are the best thing that
ever happened to the AntiKeyclowns.

As much as I hate to say it, he's right...

For an unmatched, unbalanced load, the SWR at the load will not change with coax length, but the SWR reading at the source will. The reason for this is because for every half wavelength the complex impedance exhibited by the load inverts itself as seen by the source.

If the load is matched and "balanced" properly, and the impedance at the load matches the impedance at the source, the coax length does not matter.

After a fenderbender in which a Corvair driver lost it on wet pavement and did a near 180 while sliding into my lane, I wrote into the blank on the accident report that asked me to list defects in the other vehicle that might have contributed '1963 Corvair Monza'.

The face of the dear lady in the death seat as I first saw the car against a light at the neighboring horse track caused a few cold sweat nitemares for a while thereafter.

Nader missed (he is an idiot and attorney which might contribute) the one thing for which the courts in any civilized country would have ordered the first six layers of GM management executed. The steering box was in front of the front wheels coupled to a rigid shaft terminated in a plastic spearpoint. You could hit a fireplug at 15 mph and suffer a fatal injury.

Prior to 1965 (meaning 1964 and earlier) that was true... as well as the single u-joints on the halfshafts at the rear, which liked to fold under during high speed (over about 20 mph) turns.

My Corvair was a 1965 Monza, and suffered from neither of those problems. Of course, the front end, and steering, was replaced with one that came out of a '70 Camaro...

Kinda sucked not having a back seat in high school, though..

I used to have a CB years ago in the UK and was thinking of getting one (or 2) again, but I'd be slow to get one if I'm the only person with one. what do people use here AM or FM and what about SSB?
I live in the West Cork, Ireland

Charlie...

There are a lot of decent inexpensive ham rigs made by SGS,
TenTec, Electrokit, etc. that will beat the RCI hands down.

They will also hold their resale value far longer. I paid peanuts
for my RCI-2950 used. Less than 100 bucks, and I got what I
paid for at that price.

Regards

Peter

Not that I remember but they shelled fan belts at a prodigious rate. Dumped
one on Nebr 2 at Hyannis on sunday afternoon in front of the only open
repair facility for 100 miles. That was worth a quarter and two buttons in
the plate the next week.

Source record: 88012

Hey folks... My wife brought me a few orphans from the yard sale patrol yesterday, and the first one I looked over seems a little on the sick side. It's a Robyn SB-520D AM/SSB base unit. Since my current CB base unit is an AM only President Zachary T. (which has performed admirably, I might say), I figured the Robyn would be a decent upgrade. Well, the first thing I noticed was that the receive audio seemed a lot quieter than my Zachary T.. Went from an ambient noise level of about S3-S4 down to nothing. Well - I figured I MIGHT be able to live with a less sensitive receiver, as long as it wasn't completely deaf. Then I noticed that the received transmissions just didn't sound quite right... almost as if they were (yup - you guessed it) off frequency. So, spinning the dial, I heard some traffic on 30 AM. Keyed up, asked for a radio check, they said I sounded fine. Asked for their 20, and they were less than 5 air miles away, and only giving me about S2. Not good (5/8 wave ground plane 30 feet up. Hell, if they were using HANDHELDS I should have had S5 easy). Spun the dial again and lo and behold, the same folks, but on channel 40!

Well I grabbed the old frequency counter as quick as I could and deadkeyed a quick carrier. Guess what the counter read... 27.305 MHz! Spun to a couple of other channels and they were either exactly 100 KHz off or were dead on. So - the question to you folks is this... Have any of you had experience with this sort of occurrance, and if so, is it something that can be repaired at reasonable cost - or preferably, by myself?

Any constructive advice would be greatly appreciated and warmly welcome - and would really love to get this old lady working.. Oh, BTW, no evidence of any mods on the housing of the radio, no switches, no holes where a switch USED to be. The clarifier APPEARS to be untampered with, but I have NO way of verifying this. In other words, the radio APPEARS to be in all original condition...

Folks,

I've been monitoring SSB CB for a few months now, and participating periodically as well, and I've noticed a lot of the "skip shooters" (Who I can't reach, because I'm legal) use these random three-digit, and four-digit numbers to identify each other.

What the heck are those? I actually have an old FCC CB license my Dad obtained in 1978, and it's NOTHING like these numbers.

Can anyone shed any light on them?

Thanks,

>

As an addendum to Moparholic's explanation, many fo the DX groups have adopted a loose standard that goes something like this.

2AT411

Where the 2 signifies the division, in this case the USA. AT stands for Alfa Tango, the particular group. 411 is just a group assigned number for their roster. I'll include an 11 meter prefix chart to help you out on this. It's provided by The Alfa Tango Group. (www.alfatango.org)

http://www.alfatango.org/index2.htm

Hope this helps you. Take it easy.

Hello JR: Long time no hear from ya.

Not much has changed, your reply is short but pointless. Just like on the ng rec.amateur.radio.misc

I have encouraged Aaron to seek out knowledge, friendship, hands on experiences, and the likes. I may have even saved his life with such great advice. And all you can do is point out some typo!?!?!

With logic like this I am sure I know who voted for Clinton now.

Jay in the Great Mojave Desert, ...just down the road ah ways from the fillin station.

No high horse, here. Don't need it. I do the word barefoot just fine,
thank you. You say one thing, but the gist of the matter of late is you
either obey all the rules or you're a criminal. And I'm gonna shoot that
full of holes every time it comes up with some real merit and substance,
the same goes for talking above or below 40 if it ain't on the hammie
bands, quit yer belleyachin'! If your sole argument is splatter boxes,
say so. If yer of the mindset of some of our shakier resident boobs,
thats cool, too, but it is meritless.

It's either a mod gone bad or a stuck bit on the PLL. Since the
receive is weak, my guess would be the former. It's hard to tell just
how much damage is done because most of the 'techs' that do them only
know how to use arc-welders and hack-saws. Either way, it's repairable

but it's not an easy fix. How much you want to spend to get it fixed
is up to you.

darn it........I have newsranger blocked and missed this post so I'll
address it now...........Eat shit and die! Who sells what or who's
buying is
of no concern to you.......You just need a reason to cry like the
little
child you are. Grow up! Your little click isn't going to even put a
dent in
what gets sold for CB radio legal or otherwise.
Being in radio as long as I have and knowing the people I
know........It's
going to be a long long time before slime like you will ever be able
to do a
damned thing to anyone selling radio stuff. I have more radio info on
CD's
and a larger database than most of you clowns would ever dream of and
if
need be ALL WILL BE PUT ON A WEBSITE. Everything from schematics for
amps
that we were building in the 70's and 80's to every last page of
master

editions.....secret cb.....green, gray, black books.....You name
it and
I got it. Nothing you sleazy little shits can do will EVER stop people
from
getting information they need. Bet on it!

Subject: MOBIL AMP SALE
Date: Sat, 14 Apr 2001 19:09:40 GMT
From: "Train" <cbmods@optonline.net>
Newsgroups: rec.radio.cb

As a public service to the NG, I will be offering to sell mobil amps
to
those wishing to buy them. This is not done out of greed but out of
necessity to thwart the losers in the NG who think they have taken
over OUR
nice little group and can use it to harass and belittle as they see
fit. To
offer sale of these items is just the thing needed in a public forum
to mess
with these nil-minded simpletons. Amps such as Texas Star, Palomar,
Cobra,
Messenger, Gray, Galaxy, X-Force and so on. These will be sold for a
limited
time and at a VERY small profit IF ANY !

This is not a money thing so much as it is an access thing.

Since these self appointed radio/computer gods have declared knowledge
an
illegal thing also, I might just make the entire Secret CB book series
available on CD along with a CD of amplifier schematics for base and
mobil
amps. Why is it that when these morons just think they are getting
somewhere
in their fight somebody like me comes along and pisses on their
parade?
BECAUSE THEY NEED IT AND DESERVE IT!!!!!!!!!

E-Mail me with your needs......

I have no use for or reason to operate legally.
There are thousands of us who will continue to operate as we see fit
without
regard to whatever some schmuck like you or your little click of
over-opinionated morons have to say about it. You can cry all you like
but
those of us who can, will and those of you who can't......Will
continue to
cry about it.
Train

I disagree, Train. The definition of CB is that which is laid out by the FCC in Part 95. According to it, amplifiers are not to be used on CB. Therefore what you do is not CB. Call it whatever you want, pirate, illegal, freeband, outlaw - it's not CB, and is not on topic for a newsgroup devoted to rec.radio.cb.

I'm not sure what you mean by that, Train. Jay made this statement:

> > > I have talked with some CB equipment manufactures and they believe that
> > > there are 10 to 12 million CB'ers that are active to not to active, and
> > > that the lions share do use linear amplifiers.

And I posted a follow up asked for some clarification, since I felt
his statement was an exaggeration. Do you have a problem with my
opinion? Or do you feel that Jay's data is correct and mine is
incorrect? If so, can you clarify? If you feel more comfortable
discussing it via email I am at voobner@yahoo.com

ok i asked some questions about a few radios last month but got rid of all but one...the cobra 25 is the one i have left. could someone please help me out. i'm kinda hard on money and can't afford a CB repair shop...especially what this guy costs. The radio blows fuses no matter what power supply it has...this happened out of nowhere.

THANKS IN ADVANCE
Brian Hansen

I think you should get rid of the 200 watt amp. It's illegal for CB.
And it wrecks the band for other CB users.

Source record: 88038

I sounds as if the unit might have had the power hooked up with reverse polarity. In many rigs, there is a diode placed across the power input line. Under normal conditions, it is reverse-biased, so no current is drawn. When the unit is hooked up backwards, the diode conducts, and should blow the fuse. Unfortunately, the diode itself often shorts, causing the problem that you describe. If there is such a diode in your unit, remove it, and you will be ok. Another thing that can cause this problem is if your audio amp is blown. I just got through repairing a Motorola SSB unit that was struck by lightning, and the problem was the audio amp chip. Good luck!

Oh My God.

This wasn't simply a story about revenge on a scam artist. This was a depressing, horrific saga of social and moral degeneration. I could not identify, or sympathize, with the parties on either side of this dispute. Yet, how could you not feel a knot of anguish, pity, and disgust in the pit of your stomach for what has become of this hobby? This tale is sad, shameful, and disappointing, to say the LEAST.

I read stories like this, and I have to wonder why I remain so interested in this hobby. Isn't there *anyone* left who hasn't gone off his nut, or joined the ranks of the rabidly antisocial degenerates yet? It makes me want to sell all my gear, and go back to scale-modeling.

God. I feel now, just like I did after I'd finished watching 8MM.

I don't think I'm going to come here back for a while.

FCC ISSUES REMINDER ABOUT HF TRANSCEIVERS
ï¿½
The FCC has issued a friendly reminder about those HF transceivers
ostensibly marketed for "amateur" use, but actually designed and
intended specifically for the so-called "freeband" radio operators,
who operate primarily in the 26 to 28 MHz frequency range.
ï¿½
In a May 13 Public Notice, the FCC points out that it's a violation of
FCC regulations to import or market a transmitter designed or intended
to operate outside the amateur bands unless the equipment has been
issued a grant of equipment authorization for the radio services it's
capable of operating. The FCC says it wanted to clarify its rules on
equipment that's "intended to operate in various radio services in the
high frequency radio spectrum, including '10-meter' Amateur Radio
Service (ARS) equipment." The notice--directed to "manufacturers,
importers, vendors and users of these transceivers"--emphasizes that
transmitters intended for use by FCC-authorized radio services except
the Amateur Radio Service must be type-accepted.
ï¿½
In the words of the Public Notice: "The Commission considers that the
transceivers discussed above are intended to be operated on
frequencies where the use of type-accepted equipment is required,
because of the simplicity of modifying them to extend their operating
frequency range."
ï¿½
The FCC also noted that it's illegal to import, market or operate a
transmitter that requires a grant of equipment authorization but for
which no grant has been issued, and that it's a violation to transmit
on frequencies allocated to a licensed radio service "without the
appropriate Commission-issued station license." Violators could be
subject to fines or imprisonment as well as equipment seizure and
forfeiture.--FCC

Hi N7KN,

The RCI-2950 is a mobile while the RCI-2985 is a base. It does indeed
have the appearance of being able to be "rack mounted." I wouldn't try
it though as I believe the frame is merely for aesthetic purposes with
little structural strength. (Not to mention that I personally don't
like the RCI line of radios.) Hope that helps. Take it easy.

Hi everybody,

I had stated in a previous post that I'd post the link to a nice website with nice old tube sets. (...and solid state too.) Well, here it is; along with a bonus site that many of you may or may not already be familiar with. Hope you enjoy them as much as I do. Take it easy.

Bop up to rec.radio.amateur.policy and lay that pearl of wisdom on Phil Kane, retired head of the San Fran FCC office and practicing communications attorney. He will get a chuckle out of it just as have myriad Federal judges when confronted by it as a defense.

It walks like a duck, quacks like a duck, and removes pictures of dead Presidents from your wallet just like a duck. At best, regulation vs. law is a distinction without a difference.

Dick NBK

Oh, contrare, Sir. While the dissipation limit within the transmitter is actually 10w, RADIATED power must not exceed 4w continuous for AM Carrier RF.

Please refer to US CODE TITLE 47, PART 95, SUBSECTION 410, SUBPART D, which - most definitely - IS Federal Law.
==========
[Code of Federal Regulations]
[Title 47, Volume 5, Parts 80 to End]
[Revised as of October 1, 2000]
From the U.S. Government Printing Office via GPO Access
[CITE: 47CFR95.410]

[Page 536]

TITLE 47--TELECOMMUNICATION

COMMISSION (CONTINUED)

PART 95--PERSONAL RADIO SERVICES--Table of Contents

Subpart D--Citizens Band (CB) Radio Service

Sec. 95.410 (CB Rule 10) How much power may I use?

(a) Your CB station transmitter power output must not exceed the following values under any conditions:

AM (A3)--4 watts (carrier power) SSB--12 watts (peak envelope power)

(b) If you need more information about the power rule, see the technical rules in subpart E of part 95.
(c) Use of a transmitter which has carrier or peak envelope power in excess of that authorized voids your authority to operate the station.

==========
And in 95.667:
==========
TITLE 47-- TELECOMMUNICATION

COMMISSION (CONTINUED)

PART 95--PERSONAL RADIO SERVICES--Table of Contents

Subpart E--Technical Regulations

Sec. 95.667 CB transmitter power.

The dissipation rating of all the semiconductors or electron tubes which supply RF power to the antenna terminals of each CB transmitter must not exceed 10 W. For semiconductors, the dissipation rating is the greater of the collector or device dissipation value established by the manufacturer of the semiconductor. These values may be temperature de-rated by no more than 50 deg.C. For an electron tube, the dissipation rating is the Intermittent Commercial and Amateur Service plate dissipation value established by the manufacturer of the electron tube.

[53 FR 36789, Sept. 22, 1988. Redesignated at 61 FR 28769, June 6, 1996, and further redesignated at 61 FR 46567, Sept. 4, 1996]

Impostor of artificiaI Vooby heckled: I disagree, Train. The definition of CB is that which is laid out by the FCC in Part 95. According to it, amplifiers are not to be used on CB. Therefore what you do is not CB. Call it whatever you want, pirate, illegal, freeband, outlaw - it's not CB, and is not on topic

'Then I shall enlighten you again where you fail to distinguish between free speech and regulated speech. You said yourself that amplifiers are not to be used on cb as per FCC rules. Correct. But they are used and you can't change that fact. This makes them relevant to cb discussion. You may not like that it is relevant, and the use of them may not be legal on cb, but that is your problem and, nonetheless the fact that they are used with cb leaves the door wide open for discussion about it, something that burns your ass because you have been trying to dictate something for so long that you have absolotely no control over. It is laughable to watch you change your name and attack us, but the amusing thing is you actually believe after all this time that you have a valid argument as to what can be discussed, per YOUR beliefs as to what constitutes cb talk. Amazing. As was proved to you time and time again, you don't."

Bill,

I just placed the order with your company. A dealer that responds to newsgroup messages is amazing. The salesperson, although not intimately familiar with the products, was quite helpful and friendly. Your retail prices are extremely competitive and your company did not attempt to overcharge for shipping (all to common these days). All in all I would say it turned out to be a much more pleasant experience than I expected.

I hope I have as good an experience attempting to install this stuff into my new Jeep Wrangler as I did placing the order!

Thanks,
- James

Since you are beggin' for a response to this post.....

"Since I am begging? I didn't say anything else about it. Gee Whiz, sport! Your life that empty that you have to dig through posts over a week old to answer? And the funny thing is you don't know enough to be embarrassed about it."

On Thu, 28 Jun 2001 18:11:57 -0400 (EDT), twistedhed@webtv.net (Twistedhed) wrote:
Lying Frankie said: Assumption #1: It is not my job to enforce the law.
Response: It is my legal right,

"In the form of a citizens arrest it is. How many of those have you made? That's what I thought."

Two,

"As you are so fond of saying, care to back it up with some proof? Case numbers will suffice. Ah, never mind. They were probably women or kids. Were you sued over it?"

but law enforcement is not limited to making arrests.

"Who said they were? Once again, no one did. Another failed attempt at persuasive suggestion. Better give it up, you suck at it."

  I thought

"Third mistake."
  you would know better than that. Guess I was
wrong.
"
You usually are wrong. And rude."

moral responsibility,

"Talk about morals? YOU?
HAHAHHAhahahahahahhahahhahhahaahahahahahahahaha! After all that trash you hurled at cbers in here who dared disagree with you?

hmmmm..... pot - kettle - black.

"Really? Please show one, just one post where I ever attacked someone without that person coming at me first. You won't."

Tell us about
your morals Frank, when you went off the Prozac for a week and accused all the cbers in here of being fags and MUCH much worse. Morals. Mmph."

Was that when I was Doug, Leland, Big Ben, or Glenn Sparks? Jeez, ya know twist, I have been so many people I just can't remember them all.

"You know it, I know it, and the world knows it. It's true, it's true, it's all true."

Why don't you refresh my memory?

"You can't even remember where you live and what kind antenna you have. Besides, I told you I will not educate you anymore than I already have. Your retainment value is embarrassing, even though your entertainment level has risen since you ditched the profanity and harassment techniques. But just for kicks, how about all the accusations you made concerning the homo things? You jumped all over that fag garbage Sparky,, now you going to sit here and deny it?
I found the SWR thread quite interesting and it met all my journalistic standards for what constitutes acceptable dialogue from the would-be demagogues. As a matter of fact, I had to check the headers twice 'cause I couldn't believe it came from you, but it was obvious who it was from a post or two later when you called me the "F" word for pointing out what was an apparent error in your post."

and independant choice to enforce any law I see fit to enforce. But I am not enforcing -- or breaking -- any law by posting in this newsgroup.

"There are laws against libel Sparky. You definitely committed libel and probably a few other laws, you just haven't been sued or prosecuted yet."

When did I commit libel? That's pretty hard to do

"No, it's easy to do, tough to prove. Libel, or maybe to malign one's character is tough to prove, which was the repy I was looking for when I posted it. You are correct. It is absolutely impossible to distinguish what may constitute libel except by a court of law. This also holds true for the speech content. But what is easy to identify as libel and your character malignment is obvious. I doubt any court of law would side with you as a defendant if you were to write on usenet something to the effect of "John Doe@fake.net is a child molesting drug dealer and his business is a front for narcotics and money laundering where he funnels cash to the Tongs for Opium, extortion strongarms, and guns supporting child prostitution." Even if it were true, if you couldn't prove it, you could be in a world of shit if one were too persue it through the proper channels. You are not an idiot, I know you know this. What IS interesting is if any of these ISP's are going to cancel service because of the claims made to them by anticbers. A kneejerk reaction to pulling an account without their legal team scrutinizing the law would yield unintended and negative attention for the internet company in question. ACLU loves stuff like that."

in this ng since most everyone uses some sort of anonymous nic. The exception might be Landshark, but I just posted info that was available to everyone and let them make up their own minds. Like a journalist does, ya know?

"So that is why you are fixated on me. You wish to work in media when you grow up."

Or maybe you don't know.....

"Or maybe you don't."

Assumption #2: I get upset about the law being broken. Response: I do not get upset about any CB law being broken.

"No. You get upset at me."

Probably a bit for all your stupidity. You are an intelligent person, but you sure do say dumb things.

"I don't take things serious, Sparky. At least I try not to. I learn as I go and am usually too trusting of people which is the reason you were even able to find that original article and what I did in the eighties. I wasn't hiding it, I saw no reason to. Of course, after seeing how the anticbers operate (IE. the forged ads all over the web, the forgeries, the replying to the forges) it is of little wonder no one trusts your ilk. Do whatever you can to attack people here that don't agree with your views. When they go back at you, you cry victim, like the loud talker on the playground that talks tough and when someone calls his bluff, he calls for the playground monitor. Since you are in the mood of answering old questions, what is your take on Leland seeking assistance in breaking federal law? How about him seeking modifications for ham capabilities on the handheld FRS radios? Does that automatically make him a criminal, a queer and a keyclown as you are so fond of perpetuating cbers that do not agree with you or are seeking mods? Twisted and inquiring minds want to know."

  On the contrary, the more RF pirates that break the law the better. Assumption #3: The breaking of the law does not directly harm me, a friend, or a loved one.
Response: RF pirates affect me directly in my work.

If you want a more comprehensive answer: I choose to take a stand against illegal operators for several reasons,

"And no one has a problem with that, Sparky. In fact, you might be commended for standing up for what you believe in, but you go about it the wrong way. Getting personal, changing the topic when cornered, beittling when disagreed with. I can understand if someone is a jerkoff to someone, but for no other reason than disagreeing or not seeing the laws like the anti's do? Come on, you know that ain't cool."

not the least of which is the lack of enforcement by the FCC. I am not a ham, and I do nothing directly for the benefit of any legal amateur radio operator. My actions are perfectly legal, and should be of no concern to you unless you operate illegally. Fair enough?

"No. How was that a more comprehensive answer on how RF affects you at work? It wasn't comprehensive at all. In fact, it had nothing to do with RF or your work at all.

.....speak of the devil.
The 'comprehensive' answer was to the question, not to any of the assumptions

"Assumptions? Where? You said RF directly affects you in your work. If it is an assumption, it is yours. I simply wanted to know how."

hidden within the question. I guess I'll have to draw you a picture next time.

You are not a law enforcement officer in any shape or form. True. Did you find that out with your journalistic skills, or was it just a lucky guess?

"Neither. I have two cops in my family, an uncle and a first cousin. Attitudes like yours are usually cured before they get started."

Probably the latter, since you are still horribly confused about my true identity.

"Well, I am not in the least concerned with who you truly are. Why would I care? The fact remains that you are part of 3 or 4 active subterranean anticber posters on this ng, no matter who you refer to yourself as."

I am not an LEO, but I am a responsible citizen. Wait a sec, I forgot, I -am- a Leo. And you thought my birthday was back in April. What made you think that, twist?

"That wasn't me wishing you happy birthday. Told you your memory was shot."

How I
operate does not affect you in any way, therefore it remains none of your business."
Perhaps so, but we do seem to be posting in the same newsgroup, huh? You say what you want and I say what I want. In fact, I hope you run your mouth as much as you can, because you are the best thing that ever happened to the AntiKeyclowns.

"Of course I am. You all now have a life...waiting for me to return."

Unfortunately, the newsgroup's name is "rec.radio.cb", and so - unless there is some defining charter I am unaware of (help me out here, sysop?) - does not explicitly restrict or include any subject matter, so long as it is at least _related_ to the Citizens Band Radio service. As such, debates like these will likely continue ad nauseum.

I would like to propose a solution to this vexation. How about starting two newsgroups from this one? One devoted to "traditional", or "legal" CB usage, as defined by the FCC, and one devoted to "Freebanding", "DXing", and "Hardware Mods"? For instance:

rec.radio.cb.barefoot
rec.radio.cb.leadfoot

or

rec.radio.cb.legal
rec.radio.cb.freeband

How 'bout it?

I guess I did something that pissed Geocities off. They closed the account
I was using.
I threw it up here, http://www.ptinet.net/~n7kn/ajax/pr9202.pdf
1.72 Megs, requires Adobe Acrobat reader.

Regarding Bert's post: I realize that the 2985 is a base. I believe it is
also designed to cover 10, 11 and 12 meters while the 2950 covers 10 and 11.
I'm sure you will find (once you take the screws out of it) that it is a
very similar design to the 2950. The article I'm trying to present was
written by very objective experts. It really punches some holes in some of
the opinions the RCI fans hold.
I belive the bottom line is if you are considering shelling out $500 you
would get more features, more power, more frequency coverage, better
rejection of unwanted signals, etc... with a used Kenwood/Yaesu/Icom.
BTW, the HR 2510 got a much better review.

4127. Sparky plays private dick

So you never called yourself a journalist, huh?

"Not to you I didn't. I would never divulge anything of my personal life to someone that has expressed such an attraction to me in the past."

I Just another one of your lies, twist.

"Yea, that's it. I guess I did clarify that at one time, but it wasn't a lie. I also should further clarify that at that time I would have been what constituted a JUNIOR associate. I tired of lousy pay and people hacking my stuff. I wouldn't play by the censorship rules so I had no choice. Now you know why I feel strongly as I
do concerning the attempted speech cops."

And I'm not sending you any email at all. I sent you one several months ago but you said you never got it. There's not much point in sending you email if you don't get it.

"It's your browser, that's how I know. You get those brownouts and it screws your stuff up, which is why on occasion your trash is double posted. Why no more cotse?"

Just another one of your lies, twist.

"You don't even have luster anymore, Sparky. You're only seen here when someone like me responds."

"Take it for what you want. I never claimed to be a journalist to you ever and if you were around in January and the conversation had anything to do with you, please show me instead of snipping something and taking it out of context."

with a "passion to educate the public", you are sure doing a piss-poor job. BTW,

"BTW, my paychecks and the simple fact that I sit here and do what I want proves otherwise."

what are some of those publications you write for?

" Hahaha! Can't stand it, can you? You don't have what it takes to be an editor or critic. Besides what I do has nothing to do with cb, so I am so inclined to ask why it bothers you so? Now you know where I cut my teeth in between Cali and the southland. Do a process of elimination since you are so obsessed with what I do, start with the Atlanta runs from the eighties. If you want to blow my horn for me like you are so fond of, go ahead and post the more radical stuff. You have my permission. Play private dick all you want. As you proved, it is you

that is so obsessed with me, among others."
"
"HAhahahaha! Stop it, Sparky. You still sound like a jealous little kid that wants what the neighbor kid has but will never attain it 'case you don't deserve it. You found one, find another. As I always said, it's always you girls so obsessed with our personal lives, simply, because you have none. HAhaha! Poor baby."

That's not an answer. So what are some of those publications you write for?

"Do the PI thing. You did it once and hit paydirt. Why are you so obsessed with my personal life? As you proved, you can not be a critic, but you maybe able to eek out a living getting dirt on cheating spouses."

No. I added in a agreement, to your statement. If you have ever been wondering what to do to a antenna, and Somme seconds the motion its a warm feeling.

The Eznec Antenna Molding Program shows a typical stock Moonraker working just fine. But when a back door, or more reflector wires are added the beam is now a omni directional antenna.

The guy is thinking Roof, Ladders, dropping the antenna, where to start, what materials, how to install them, not damaging the roof for when it rains, ect ect.

> Guess you were just bored.

Nope I just wanted help out a little, by adding in a second opinion. I wish I had the time to get board.

Have ya heard Dave out there lately?

Actually there probably is no FCC employee that requires a gun for his job;
the US Marshall Service performs that function admirably. The power to
draft regulations in what is clearly an international let alone interstate
function has been granted by Congress on at least three occasions, the
Federal Radio Act of 1927, the Communications Act of 1934, and its rewrite
several years ago. The FCC is not the only such regulatory body.

The only thing a judge need be to see thru your argument is awake.

Since people have been talking about this radio covering 26-28 mHz,
maybe this will help clarify things.

-Aaron-

FCC ISSUES REMINDER ABOUT HF TRANSCEIVERS
ï¿½
The FCC has issued a friendly reminder about those HF transceivers
ostensibly marketed for "amateur" use, but actually designed and
intended specifically for the so-called "freeband" radio operators,
who operate primarily in the 26 to 28 MHz frequency range.
ï¿½
In a May 13 Public Notice, the FCC points out that it's a violation of
FCC regulations to import or market a transmitter designed or intended
to operate outside the amateur bands unless the equipment has been
issued a grant of equipment authorization for the radio services it's
capable of operating. The FCC says it wanted to clarify its rules on
equipment that's "intended to operate in various radio services in the
high frequency radio spectrum, including '10-meter' Amateur Radio
Service (ARS) equipment." The notice--directed to "manufacturers,
importers, vendors and users of these transceivers"--emphasizes that
transmitters intended for use by FCC-authorized radio services except
the Amateur Radio Service must be type-accepted.
ï¿½
In the words of the Public Notice: "The Commission considers that the
transceivers discussed above are intended to be operated on
frequencies where the use of type-accepted equipment is required,
because of the simplicity of modifying them to extend their operating
frequency range."
ï¿½
The FCC also noted that it's illegal to import, market or operate a
transmitter that requires a grant of equipment authorization but for
which no grant has been issued, and that it's a violation to transmit
on frequencies allocated to a licensed radio service "without the
appropriate Commission-issued station license." Violators could be
subject to fines or imprisonment as well as equipment seizure and
forfeiture.--FCC

Yes, it is horrific that anyone would do such a thing. Unfortunately, some individuals in this NG help keep that barbaric spirit alive.

"1mangang@mydeja.com" (generally acknowledged to be Twistedhed@webtv.net) made profanity-filled threats to one individual for weeks on end - with the tacit approval of this group.

"Superswangthang" (generally acknowledged to be "Chuck") posted a threat to destroy an individuals property and harm his family - again, with the tacit approval of this group.

I myself have been the victim of serious threats. At one point, "Phoneman" was offered a substantial cash reward by a coalition of illegal CB amplifier dealers and manufacturers in exchange for personal information about me and my family. He warned me that if I didn't stop posting negative opinions about illegal cb in this forum that I would very likely be "found face down in a ditch" at the hands of "some very bad people".

I know, it sounds unbelievable, but let me assure you, it happened. Of course, taking into account the emotional maturity levels of those making the threats, it is unlikely they could ever carry them out successfully.

However, it is sad that such an ugly strain of violence must reside in so many individuals. And over what? Not a dispute about property (as in the Chris Marquis case), but merely over conflicting opinions.

There is also Doc's Radio Repair in Buffalo NY.

http://kjv.homeip.net/~hr2510

This guy has been servicing >*MY<* electronics for more than 10 years, and electronics in general for about 20 years.. I'm such a happy customer that I decided that he HAD to be on the web and I designed the site for him.

Excellent work, warranteed, and an all round great guy.

One more thing... Unlike other "golden screwdriver" techs, Doc has a degree in electronics.

See if Doc knows anything about that unit.

http://kjv.homeip.net/~hr2510

He has a degree in electronics, and does the repair work on the side out of
his home.

All work is warranteed, and he knows his stuff about electronics. He's been
servicing my gear for almost 10 years now. He's one of the best Radio
tech's I have ever met.

On Mon, 9 Jul 2001 13:31:00 -0400 (EDT), twistedhed@webtv.net
(Twistedhed) only wrote a couple things worth a response:

<snip twistie-rant>
>"Talk about morals? YOU?
>HAHAHHAhahahahahahhahahhahhahaahahahahahahahahaha! After all that trash
>you hurled at cbers in here who dared disagree with you?
>
>hmmmm..... pot - kettle - black.
>
>"Really? Please show one, just one post where I ever attacked someone
>without that person coming at me first. You won't."

Do you mean most recently (since July 1, 2001)?
<19062-3B421CBC-163@storefull-121.iap.bryant.webtv.net>
<9194-3B3FAAD1-143@storefull-125.iap.bryant.webtv.net>
<5432-3B448472-233@storefull-126.iap.bryant.webtv.net>

You jumped on these three different people, that didn't even remotely
imply anything about you, accusing them of being Leland or someone
other than who they said they were. Does the term 'face value' mean
anything to you?

<snip more twistie-rant>
>"Well, I am not in the least concerned with who you truly are. Why would
>I care? The fact remains that you are part of 3 or 4 active subterranean
>anticber posters on this ng, no matter who you refer to yourself as."

This is your crutch, twist, and is the foundation of all the garbage
you spew in my direction. If you ever try to prove this delusion your
entire world will fall apart, because not everybody shares your
problem of MPD. Now I see that this is all a projection. You posted as
1mangang and N7VCF, and probably others, and you seem to feel that if
-you- need to post with other accounts, then others must be doing the
same. Sorry, twist, that ain't how it works. I only have one identity
because, unlike you, one is all I need.

If you want to hobble along while leaning on that crutch of delusions,
then don't bother trying to prove anything (not like you could
anyway). It's probably better that you -don't- try to see things for
the way they really are, because after your delusions get shattered
you will most likely end up in a rubber room wearing a white jacket
with really long sleeves.

Hello Frank:

No with 12 million CB'ers in the USA, there is a minimum of 6 million linear amplifiers, to even way more being used by CB'ers.

Figure 6 million amps using a min of 2 pills each, = Big Buck$.....
Say somewhere in the ball park of 24 million dollars plus, for starters.

Again just American CB Folk Lore, no national origination to back any kind of numbers os statists.

How do you think Motorola financed advanced research into VHF and UHF high power transistors, Impedance Matching Techniques, and many other independent R&D projects. Once the cash flow became apparent the upper brass, the application notes became widely published. Ever see MOTOROLA advertised on a few racing cars, boats, and planes?

Also I think the Free Speech thing has a little to do with this, ah? I am sure the Constitution is somewhere on the net?

If it hasn't been modified (this is the impression I get) then it should be
a simple fix. Worst case scenario I would think that the PLL chip might be
bad, OR perhaps a wite on the channel selector has a cold solder
connection.. That's probably why when you select channel 40, a lead on the
PLL doesn't get current, and hence it generates the frequency for Channel
30.

First off, I am not Doc (whom I recommended you contact above and would know
this.) However I'm wondering just what the heck a stuck bit on the PLL would
have to do with the receiver sensitivity? The PLL just generates a
frequency, so... I could understand if say when Channel 40 is selected
(which evidently puts it on channel 30) if the receive was less. Because
then I'd suspect that a cold solder joint is letting current through, just
not nearly enough. But this also depends on the PLL as well. (I'm a
software programmer with a basic knowledge of digital electronics. So I'm
just asking.... Don't take it the wrong way...)

> is up to you.

^^^ Call Doc... If noone has been in this radio before it's got to be a simple fix. Worst case scenario I would guess a bad channel selector, or a bad PLL.

Thanks Gents,

I ALMOST picked up a Hammarlund 212 CB on ebay today. It was a spur of the moment thing and my passion bid before my brain kicked in. I really want to get a nice old tube CB, preferably Browning, Hammarlund, or Hallicrafters; however, this was not the set. I jumped because it was MIB, (Mint In Box, same as NOS) but it was only a six channel AM. (A mode I rarely, if ever, employ.) Needless to say, I've never been so happy to be outbid as this afternoon. I'm glad you enjoyed the sites.

73 de Bert
KC2HMN

P.S. I did see a Browning Mk. IV with the first bid set at $1500.00 and a "Buy-It-Now!" of $1800.00. My birthday's in December, if anybody's interested? ;-)

Brian, Call Doc...

As long as you call him and spend the dime on the LD he'll go over some possible causes with ya.

http://kjv.homeip.net/~hr2510

He trouble shot a radio while I was there over the phone. I forget the model, but he told the guy exactly which component was bad, and where to get another one. The guy was so impressed he called back and let him know that it worked! If I'm not mistaken he was in Georgia somewhere. Roughly 2 minutes on the phone and he had troubleshot it and hit the problem bullseye.

I'm not saying that this would be the same with your situation, BUT it's worth the few cents for the call.

These are the voyages of the swelled head Eitnerprise. On it's four year mission to embellish new tales and ego mania. To boldly state what no man has stated before.

BTW: As far as the existence of a "God" (of any sort) you better brush up on your theology and logic. You can't prove a negative, and therefore you can't prove that "God" exists. You got it backwards.

I'm not challenging your omnipitous understanding of subatomic physics and electron particles at all. And I wouldn't doubt it if when you soldered bolts of lightning came out of your iron either....

But, you may want to tone it down a bit.

> >
> > Anyone who thinks they know more about solid state CB

DISCLAIMER: Bill takes no responsibility for his actions. Plagues such as raining toads, locusts, famine, drought, and for those of you in California earthquakes and rolling blackouts should be covered in your appropriate insurance policy as "acts of god". Seeing as Bill cannot prove that he exists don't be surprised if you don't get a response to your e-mail.

DIRECTIONS IF A REPLY COMES: Proceed immediately to the nearest Amateur radio testing facility to be "ordained" as at least a novice since that's the only place that you can legally use equipment like that.

SELF DISCLAIMER: Said tie and time again... I am only the messenger... Don't shoot! ;-)

It doesn't. But with almost all the radios I have seen, the mods
didn't stop with the PLL. Parts get snipped, and a lot of the time
it's the wrong part. Alignments are attempted by people that only have
a small ferrous screwdriver. I even have a nice old Teaberry that has
part of the circuit board cut out. It's amazing what people will do to
their radios, but rarely do I see a radio with just one mod.

That's what I meant by a "stuck bit", as you also described in the
paragraph above. I did say that it wasn't a simple fix based on my
definition of simple (like tightening a loose mic jack or replacing a
scrunched speaker). It is not a problem that someone without
electronics skills can troubleshoot and repair. That's all I meant.

No high horse, here. Don't need it. I do the word barefoot just fine,
thank you. You say one thing, but the gist of the matter of late is you
either obey all the rules or you're a criminal. And I'm gonna shoot that
full of holes every time it comes up with some real merit and substance,
the same goes for talking above or below 40 if it ain't on the hammie
bands, quit yer belleyachin'! If your sole argument is splatter boxes,
say so. If yer of the mindset of some of our shakier resident boobs,
thats cool, too, but it is meritless.

Hey Twisted. Is this a case of "it's true because you say it is"?

"Is WHAT true?"

Unfortunately,

"for you"

the newsgroup's name is "rec.radio.cb", and so - unless there is some defining charter I am unaware of (help me out here, sysop?) - does not explicitly restrict or include any subject matter, so long as it is at least _related_ to the Citizens Band Radio service.

"Uh, skip, AND boxes, and slow scan, and FM, and I can go on and on, are all part of it, like it or not. Go to a gun forum. Certain guns are prohibited, such as handguns in NYC. You would have them not be permitted to talk of illegal guns in a gun forum, no?
Holes.....argument....yours."

As such, debates like these will likely continue ad nauseum.
I might add here that it is not my intention to stop debate. Only to provide the "alternative" point of view to illegal CB.

"That's not a problem. No one has ever had a problem with anyone espousing the virtues of what they think, well, except the anticbers like yourself always concerned with what we think."

Assumption #1: It is not my job to enforce the law.

It's not "everybody else" that's wrong, just you, with your obviously warped world view. It would appear that you are one of those who, under the rationalization of "liberty" and "freedom," would claim unlimited private rights to limited public resources. Transmit all you want, on any frequency you want, just don't allow it to enter MY airspace, asshole.

Artificial Aaron (not to be confused with Artificial Rhonda) said: Yes, it is horrific that anyone would do such a thing. Unfortunately, some individuals in this NG help keep that barbaric spirit alive.
"1mangang@mydeja.com" (generally acknowledged

"Lie right in artificial aaron. I don't mind. That dude must have scared you. Swangthang, too"

to be Twistedhed@webtv.net) made profanity-filled threats to one individual

"Post them."

for weeks on end - with the tacit approval of this group.

"And the approvals."

"Superswangthang" (generally acknowledged to be "Chuck") posted a threat to destroy an individuals property and harm his family - again, with the tacit approval of this group.
I myself have been the victim of serious threats.
"Only of education."

At one point, "Phoneman" was offered a substantial cash reward by a coalition of illegal CB amplifier dealers and manufacturers in exchange for personal information about me and my family. He warned me that if I didn't stop posting negative opinions about illegal cb in this forum that I would very likely be "found face down in a ditch" at the hands of "some very bad people".

"And another time you girls blackmailed the group. And another where you gals were tripping all over yourself with envy and drool trying to find out info on me and others. Now Sparky is dying to know my outside interests besides cb. What did I have to do with any of that?"

I know, it sounds unbelievable, but let me assure you, it happened.

"Some of what you said has merit, the majority is BS as usual."

Of course, taking into account the emotional maturity levels of those making the threats, it is unlikely they could ever carry them out successfully.

"Like Doug? He was the very first one since I have been here to make a physical threat."

However, it is sad that such an ugly strain of violence must reside in so many individuals.

"And you frolic with them."

And over what? Not a dispute about property (as in the Chris Marquis case), but merely over conflicting opinions.

"Ha! One's that affect you so much you alias out and threaten cbers for it."

- Artificial Aaron-

I think you might be a bit high on your guess if the marketing jocks are correct. The average CBer before he loses interest goes thru about 7 rigs which makes for a tremendous used market and a lot of stuff in garages - with a lot of blown pills. He will usually end up on SSB with a converted ham rig. Probably worse in other countries where both amateur and CB licenses are harder to get and where annual taxes and baksheesh take their toll.

It would be more likely that the major funder of Motorola's R&D was our good Uncle Samuel. Given the 'Buy American' rules for defense procurement and a lot of experience in it themselves the two combined to unload a lot of development cost from the product line.

Motorola sells or sold cell phones, FRS stuff, etc. undoubtedly from Guandong Province China so plastering the logo on boats and things makes sense. And they still have a monumental percentage of commercial FM usage in the US. While the builders of multiple-pill amps are undoubtedly a part of the market (particularly when the users insist on blowing them up) just how big is a good question. Given that Motorola gear is generally designed to take a lickin' and keep on tickin' being confused with 'tune for maximum

smoke' CB is not exactly what they have in mind from a marketing perspective. They will take the money though. Note that the later additions to the line are 50 volt transistors designed for the upcoming conversion to 36-42 volt electrical systems in vehicles. FET modules anyone??

Unfortunately, the First Amendment is enforceable only against government so there is no right to sue the mob that drowns you out. Nor does it give anyone the right to speak and not have someone drop the big Monty Python foot on him. Aaron is well within the legalities and the proprieties as he sees them; incorrectly in my opinion, but the same has been said about everything from the abolition of slavery to birth control.

I have been known while my Saturday morning repast was being attacked by an old fart who had racial attitudes that probably would have offended Hitler to ask him if he bought his white sheet in perma-pressed or made his wife iron it. He was not impressed but his wife and other couple at the table nearly wet their pants to keep from laughing. My thing is racial stupidity, Aaron's is illegal CB. Neither of us is about to be silenced. Invading my space with a cell phone will often get a reaction from me; I recently asked a fellow with a belt-mounted phone and headset prancing about running his business in the line at a bakery if he topped the performance by farting in public as well. There is something to being about 6'2 and 240 that keeps me alive.

In the long run of things, let the honest but misguided find out they are misguided by participating in the rough and tumble of public debate under their own name. Ruthlessly killfile public newsports and those who confuse old Anglo-Saxon words with logic simply as a waste of time. Beyond that, let opinion and information roll!

Dick N&#65533;BK; reformed tilter at windmills (and the Great Plains once had a few worth tilting)

Hey Capt Jack, Helmut Sweenie, Prozac
Proziac, Informat8ion, Etc etc.
What ever you want to think, but I'm not
changing my nic every other post, nor am
I logging on to one of my "eight other accounts"
So you can rest assure that I am here, on this
account and only this account, so keep flinging
your bull.

Landshark
Oh, by the way..... How's your SWR today?

Why Hi Prozacholic, Helmut Sweenie, Capt Jack
Moped, Informat8ion, Prozac, Proziac, World wide proziac
ahhh Screw it..... I can't keep up with all your name changes.
I see you can't answer any questions still, bummer
you would think you could've thought of some answers
by now. Keep spewing your crap along with Frank and Doug, the only people
you impress..... are yourselves.

I am not changing mine every other post either, I still post from the same ip everytime, there is no deception there. Whats the big deal with a name Please let me know. Am I stuck with Prozac for life since that was my first one? haha now I have 8 accounts. You should have used a different acount when you went to the alt.sex NG we wouldnt be talking about it today. Have a good evening.btw I rained here so my swr was kinda high today.

Subj: [rec-radio-cb] CD, Its Gonna Hurt
Date: 7/9/01 6:39:17 PM Eastern Daylight Time
From: KnightPatrol82@aol.com

hey jarhead, its gonna hurt when i bring the pain to your pip squeek little mobile. the only way your going to have a chance at all is if you drop some bucks on some ceramic and steel or your riding with one of the big strappin boys out of h-town. i've been getting ready to assume my new job as your probation officer. i got everything straightened out with the 4 tube sb220 and i just won a driver for it on ebay last night and i already got a cobra 2000 to push the blueface 225 to drive the driver with. when i get everything right and go up with the antenna your in some trouble but i dont want to hear any crying. the ebay name is my moms, i dont have a credit card so i use her account.

Hello Mopedaholic,
Why yes I do, I've been quite happy
blocking out Frank's and Doug's dribble.
I never been bothered by you, so I didn't
install one for your ip, should I? Oh by the
way, how's that AOL Account holding up?
ok I hope, see ya.

Landshark

4193. help with my HR 2510 (no volume)

Newsgroup: rec.radio.cb
Date: 2001-07-10 04:21:41 UTC
From: tramd300@goingplatinum.com
Message-ID: <2bd4c5f2.0107092021.1f95e837@posting.google.com>
Source record: 88231

Here's the problem & what I have changed & checked...
Unit receives & shows signal, I can faintly here a tone when injected
with signal generator, but there is no volume adjustment.
I have checked the following and all are in working order...
Replaced audio amp, replaced volume switch, checked speaker and wires,
Also have the same results when using an external speaker.
This is the odd part..
When roger beep is enabled, I can hear it and adjust the loudness of
the tone as heard through my internal speaker with the volume control.
I don't recall being able to hear the roger beep prior to this volume
problem.
If you have any serious solutions or can help me out, please contact
me direct at...
tramd300@goingplatinum.com

Thank you in advance...

Source record: 88232

They are quite easy to build. I have built several, and almost all of them were to get the local troublemaker off the monitor channel.. One main one I recall, I built inside an old ceramic large living room lamp, complete with lampshade. I used 2) seperate 9 volt batteries, hooked to a 3-way toggle switch connected to the power leads of the radio inside of the lamp, which was glued shut. The switch needed to be turned to either one of the "ON" positions (either up or down, center is off) Up was one of the batteries, the other was down. Before I glued the lamp shut, I hot glued aluminum foil throughout the inside case. I used an old 40 channel Realistic handheld CB, for the transmitter. I hardwired one of those 1/2 wave dipole antennas, that you can buy from Copper's, straight to the antenna output jack up the back of the lamp, up and across a nearby fencepost, painted silver, and attached with silver duct tape. (out of sight, and the same color as the small 4' high fence) A solar cell or two will help keep the batteries charged for long periods of time. I set mine about 50 yards down the alley from the troublemaker, and camouflaged it quite well, next to a house that was being remodeled.... That already had a bunch of trash, etc in the alley.. It worked for about 5 days, until the whole channel, that days before hated this guy, now were defending him, and trying to find the carrier that was plugging his ears..... Go figure.. All in all I had spent maybe $15.00.... It was fun anyway.... Have fun.

Maniac

Message-ID: <9ie2j9kcg1@nnrp2.phx.gblx.net>
Source record: 88235

I have an old 148 GTL, a R.O.C for those who care to know. I have a adder board for a Galaxy 88 that uses the MC14008BCP chips. I read somewhere that the combination of these chips used with the MB8719 could produce a 5 band radio with 40 channels per band, 240 channels.. Would anyone have any ideas on how to incorperate this idea into an already perfect radio? :) I get bored and get crazy idea's, but hey its all for the fun and the challenge of it.

Any information is appreciated,
Jeff Kross

No high horse, here. Don't need it. I do the word barefoot just fine,
thank you. You say one thing, but the gist of the matter of late is you
either obey all the rules or you're a criminal. And I'm gonna shoot that
full of holes every time it comes up with some real merit and substance,
the same goes for talking above or below 40 if it ain't on the hammie
bands, quit yer belleyachin'! If your sole argument is splatter boxes,
say so. If yer of the mindset of some of our shakier resident boobs,
thats cool, too, but it is meritless.

Not at all, sir. I am merely responding to posters within this thread
with some very relevant information. These are your country's laws,
sir. Why should the publishing of them in a public forum disturb you
so much?

>Last time I checked this was AMERICA.

It still is. And if you don't like the FCC laws here, you have a
choice. You can work to change them, or you can leave. There's no
valid excuse for being an outlaw.

Ain't nothing you wouldn't hear on cable TV. More children get their
daily dose of unreality from TV then CB. While your "efforts" are
noble in your own mind, they fall on deaf ears like a banner ad.

>Again just American CB Folk Lore, no national origination to back any
>kind of numbers os statists.

Then where did your numbers and statistics come from? And how do the numbers for CB compare with the numbers for other markets within the RF industry?

>How do you think Motorola financed advanced research into VHF and UHF
>high power transistors, Impedance Matching Techniques, and many other
>independent R&D projects.

Military, NASA, and other government contracts and grants.

> Once the cash flow became apparent the upper
>brass, the application notes became widely published.

So are you saying the development of RF technology became available because of the increase in CB sales? I don't think so, Jay. Step back and take a look at the big picture. CB radio has always been ten steps behind state-of-the-art RF technology. Even today, with the advent of VLSI and high-density monolithic design, in comparison, the newest technology that CB radio has to offer is primordial goo.

> Ever see MOTOROLA
>advertised on a few racing cars, boats, and planes?

That statement reminds me of Harley's brief venture into the moped market. Motorola has a large line of professional and commercial grade radio communication equipment, and they have been in the biz since long before CB radio. Their other product lines have included a wide variety of products in RF, audio, power and industrial electronics, as well as a significant share of the microprocessor industry. And their

corporate holdings extend well beyond that. I really don't think Motorola spends a lot of it's advertising budget on CB radio. But then you might want to fabricate ....er, research some numbers just to be sure.

>Also I think the Free Speech thing has a little to do with this, ah? I >am sure the Constitution is somewhere on the net?

If you want to discuss the First Amendment, try a more appropriate newsgroup, like alt.free.speech. This one is about CB radio. Post what you want where you want, but expect others to do the same, even if it is to tell you that you are off-topic.

None taken. That is why I said 'later additions'. There have been, as you say, some 50 volters since Custer was a 2nd looie.

The change is being brought about because the current draw in modern cars is getting out of hand. Witness the great ignition switch problem; Mopar incinerates the plastic around the steering wheel where Ford has arranged to catch fire in the garage.

I fixed car radios when I was in high school and got to watch the transition to 12V negative ground. We had one guy, ran a service station in fact, that was blowing audio transistors on his 56 Ford until we discovered he had his regulator, etc. polarized for + ground like the old Fords had been.

Will have some interesting effects tho.

Dick

Thanks for the product review repost. You know, I've been reading QST and its product reviews since 1979, and I don't think I've ever seen them make so blatant a negative comment: "positively terrible?" Wow! The ARRL usually tries to be fair and not "slam" a product. It seems they're trying to tell us that this radio is one book you definitely CAN read by the cover!!!

BTW, my hometown doesn't have a ham store and I have to visit a (gulp) CB shop to get my cable, connectors, etc. -- actually they have a pretty good selection and quality stuff, but the prices are kind of high. Well, this place (called "Mobile Music" and located in an old gas station) not only sells the entire Ranger line, including that huge, rack-mount CB whose innards I'm sure are mostly air, but also the full Astatic line, the entire MFJ line and -- get this -- Ameritron amplifiers, proudly on display along with the Cobra CBs and the Sadelta Echo-Master mikes! Hmmmm ....

I was surprised, too. I'm going to have to read the article over again to see if they said anything good about that radio. I think it was the split operation for 10 meter repeaters (try finding a tone squelch board for an RCI, all the ads say they're available).

The nearest store to me is in Seattle (40 miles away, Radio Depot). I usually just order from HRO in Portland. The gas savings and sales tax savings far offsets the cost of shipping. Sometime you can even weasel your way out of the shipping cost.
Ameritron amps in a CB shop? I don't think Radio Depot even stocks them. Too much overhead.

I assume you are looking for a new "gizmotchy" antenna. Here are a couple of links about them and the manufacturer's information:

Charles Radio Co.
6836 W. Pearl City Rd.
Freeport,IL 61032
Phone:815-235-7733

http://www.retrocom.com/gizmotchy.htm
http://www.kenselectronics.com/
http://www.rrcom.com/sales/antenna.html

Interesting, you are basing all of this on a 9 year old article about a radio that is discontinued, no longer manufactured and replaced by a newer, much improved model. The new RCI radios are totally different. They are now surface mount component construction, perform much better. Remember the first Japanese cars? Look at them now!

When you find an un-biased article that is really about the radio we have been discussing, please post a link to it and we will all look at it. This is ancient information and does not describe any current Ranger product.

First, I did not cite regs, I cited three acts of Congress which qualify as 'laws' in anyone's book or should.

No, I have not read the Communications Act of 1934; it is on my list right up there with reading my life insurance policy and rechecking the math of the 1958 CSO mortality table. Nor have you nor anyone else without a professional interest.

But the issue of the regulations as law has been litigated many times since the practice began in the 1880s with the Interstate Commerce Commission of delegating rule-making authority to quasi-legislative and quasi-judicial organizations of which the FCC is but one. Like any other one of these, the FCC rules are subject to both Congressional and judicial review and must generally get enforcement thru the usual Federal Prosecutor route.

Spare us the seabag lawyering.

A 5/8 wave ground plane always beats a 1/2 wave dipole.

It may be a "good" antenna, a V58 or a Jay In The Mojave
antenna is a better bet.

(Jay, insert plug here)

Dear fellow CB:ers

Javaradio.com - The remotely controlled radio network on the Internet now celebrating its third year.

We have put 2 receivers near the Copenhagen area.

Remotely controlled Receiver #1 = All mode 0.1-1300 MHz with discone at 70 meters above sea level.

Remotely controlled Receiver #2 = Four 8 element stacked yagis FM DX receiver with web controlled azimuth control

73 de Webmaster - Javaradio.com

Welcome to:

http://www.javaradio.com

Listen and tune it LIVE!

Anyone have any suggestions to keep RF out of these first generation ECU computers in these cars.
The 82 Cavalier keep stalling when I key the mic, trunk mounted K60 and thin RG 8u.

The FT101 is an amatuer radio favored by outlaws operating illegal CB.

1. Get a decent DC ground. While the shield might do the job it works better if the negative lead to the radio comes off the alternator bracket or battery lead.

2. If you have a rear-window defogger you are what is commonly known as screwed.

3. If the only ground in the antenna system is the allen screw holding the thing to the trunk lid lip and the coax runs thru the window you have made the DC ground lead part of the antenna system along with you and the mike cable. There is enough rf in the cab to draw sparks. Compooters are somewhere above the passenger's feet and they really don't like being part of the antenna system. Short and sweet: you ain't connected to the trunk lid but then the trunk lid is not connected to the rest of the car anyway.

So you need to reinstall it correctly or if you insist on the trunk-mount and cigarette-lighter approach do something like the following:

1. Make up a coax lead to reach from the radio to the seat bolt under your butt.

2. Buy a double female barrel connector and a couple of small hose clamps. Use these and some #14 ground wire, about a foot or less, to wire the barrel connector to the seat bolt. Use a washer and solder it if need be. You will need to scrape the galvanizing zinc off the washer.

3. Connect the lead between radio and barrel connector and your present coax into the other end.

This should quiet the compooter but you will still not radiate for shit.

4. Use the rest of the wire the hardware store sold you to figure out a good way to electrically attach the trunk lid to the rest of the car.

Good as in Luck

Dick N&#65533;BK

Looks like you hit it Rich, just took a look.
I do have a read defogger.
The RF was getting in via the traces in the rear window then into the wiring harness.
I just placed a .01 disc cap from the window+ terminal to ground with the portasol.
No more stalling.
I have both the trunk and antenna mount grounded with heavy braid as well as the radio.
Hash and RF choke, cap on the radio B+ ground.
Will tighten add some additional grounding tomorrow in the daylight
Thanks, Joe

You got out lucky, most do not respond to that approach quite so easily. I have fought a few of them from my Wisconsin days where RWDs are required.

Sounds like you have the rest of it pretty well under control.

Dick

4254. Putting a CB on a moped with 6V AC power?

Newsgroup: rec.radio.cb
Date: 2001-07-11 02:12:31 UTC
From: rustyameri@aol.comPROMARS
Message-ID: <20010710221231.10162.00006040@ng-md1.aol.com>
Source record: 88393

I got a moped, and I wish to put a CB on it. The moped does not have a battery. The source of power is from an alternator. It generates 6 volts AC (For the headlight, brake light, etc..). However, when you give the moped gas (Throttle up), the voltage jumps to the teens area (Like 16 volts) . I confirmed this with my multi meter. So it is unregulated. My question is, how do I convert that power to DC (13.8 volts)? And how do I make it so that when I give it gas, the 13.8 volts stays constant? I'm not too concerned with the voltage jumping all around on the AC side, but the DC side would have to be stable at around 13.8 volts. Be as specific as you have to be. I can make the converter myself if I have to. Please help. Thanks.

Nah, he doesn't. He does, however, have a "reserve". He can end the auction early, or, if no one meets his reserve, he can sell it to someone else that did not participate.

4257. Any websites that have real time CB broadcasts?

Newsgroup: rec.radio.cb
Date: 2001-07-11 02:35:09 UTC
From: rustyameri@aol.comPROMARS
Message-ID: <20010710223509.10162.00006049@ng-md1.aol.com>
Source record: 88397

Just wondering, are there any websites that have real time or almost real time broadcasts of a specific CB channel. For example, maybe some guy, out in Texas has a CB set to channel 32 and has his website that broadcasts what his CB is receiving. Take it even a step furhter and there is a small window of the RF/Signal meter so you can see your "poundage". I think this would be a cool idea so that many Dx'ers can hear and see what they sound like, see how long the delay is between when they let go of the mike and when they hear themselves, etc..Any websites even remotely like this? Thanks.

> as for my woman, your still mad because i actually have one.

You're still too young to know yet but I'll give you a bit of advice Tim. Women are far easier to get than to get rid of. You can get them for almost nothing everywhere you look. The older they get, and especially if they have kids, they want a "sugar daddy" to take care of them. Then later before you know it, they think they own half of everything you got, and the courts will agree with them most of the time too. Remember that women are the most expensive hobby you can have.

You getting tired getting of the "I have a headache" routine when you want some yet? Remember why a beer is better than a women? At least when you're done with the beer you can get your deposit back in those states that have it. And with a beer at least the headache is AFTER the fun.

Moped magnetos only put out 500MA to 1.5 amp's tops
You will need to store power in a deep cycle gel battery
and charge it through a diode.
The magneto wont put out enough current to overcharge a 12V-7AH battery
....unless you have it floored for 40 miles
, use a 13.8 or 14 volt zener diode if you wish

> ---REMOVE PROMARS FROM MY E-MAIL ADDRESS TO E-MAIL ME

Since the voltage drops below 13.8 you can't regulate it. The low drop out voltage regulators on the market need at least 1 volt above the rated regulated voltage to function, and the older normal voltage regulators need at least 2.5 volts or more. Second when it does jump to 16 volts you still need to rectify the AC voltage, then use a high current voltage regulator. Since the alternator on your moped is very likely single phase it will need a lot of DC filtering after the rectifier. The alternator on larger motor vehicles is 3 phase so it requires very little filtering to give clean DC, so that's why they use it, 3 phase. Finally the last thing to consider is the alternator on your moped may not have enough capacity to handle the extra load due to your mobile CB anyway.

Most consumer electronics for mobile use are designed to operate from 12 to 14 or 15 volts DC. When the voltage drops below 12 volts DC the equipment has a possibility to malfunction. In your case I think the best bet is to go to your local department store and get a small 12 volt DC motorcycle battery and a cheap battery charger. A battery in the range of 4 to 5 amphours should be enough for about 2 to 3 hours of mobile operation before needing a recharge. Believe it or not some Hams that can't drill holes in their vehicles, like leased cars, just get an extra car battery and stick it under the seat in a van, or the trunk in a car. This provides enough power for a 25 to 50 watt radio for several days before needing a recharge. So the solution I'm suggesting has been done before by others so don't dismiss it right off hand.

Yes.

> I know I would have to ground the antenna base and
> such....anyone have any luck with it?

There was a thread on this news group a while back about this subject. The question was asked if a mobile antenna could be used as a base antenna. Yes it can with a large enough ground plane.

> I don't have the ability to put up an antenna,

If you mean that you are not permitted to put up antenna then your only solution is trying to use one of the short mobile antennas with a ground plane. On the other hand if you mean you can't put the antenna up yourself physically then how about asking some of your friends if they can do it for you. Many disabled Ham Radio operators have gotten on the air that way. In fact some able bodied Hams even form a local group to do just that, help out the disabled with their hardware installations.

> nor do I have the money to buy a base

Now if money is a problem people have made their own 1/2 wave antenna using nothing else but the coax cable! You just strip off the outer plastic jacket for about 108 inches. Take the exposed braid of the cable and carefully push it backwards up over the outer plastic jacket so that it extends the same length, 108 inches, over it. Now hang the coax, the end of the part with the white foam on it, up in the clear on something nonconductive, and well away from power lines, aluminum siding on the house etc. I have even head of people doing this by taping the coax to a long section of wood, then fastening the wood to the chimney on the roof. Check the SWR on channel 19. If the SWR is too high then trim off a bit of the braid AND the section with the white foam by the same amount at the ends. Don't trim off more than about a quarter of an inch at a time. Don't expect the SWR to be much better than 1.5 to one at best. Not exactly a great antenna, but it's cheap, and can get you on the air. Oh, don't forget to put some sealer around the area where the braid just separates from the white foam to keep out rain water.

If you're talking the presiding US Supreme Court, I can think of a boat load
of _very_ descriptive names for it. :-)

> Re. the Mk. IV...Honey!...Oh, Honey!... 0_:-)

Neat old radios. I have seen like new MK III's on Ebay go for 500 to 700 bucks. Same for MK IV's. Unless that radio has never been out of the box _and_ comes with both mic's, the 180 tube amplifier, etc, I think the $1500 may be a _wee_ bit high. Who knows, maybe the guy will get lucky and find a buyer. Stranger things have happened. Hell, look what less than half the vote put into the White House! :-)

Hi

I am needing a part to repair my Uniden HR2510. I need an SWR level adjustment pot. These seem to be slimmer than regular pots and I'm having difficulty locating one. Do you know where I can get this part? Do you have any spares? Do you have any HR2510's that are beyond economical repair? I'd be interested in buying one.

cheers
Jack

Thanks Jeff,

LMAO...that's good! :-D I agree with you re. the prices...some of these sellers get a little out of hand. BTW, looks like that auction ended with "Buy It Now." It was no longer active. Crazy, eh? Take it easy.

Like anyone really CARES what motivates his posts?

What an ego maniac. Reminds me of a cartoon years ago in the New Yorker magazine. At a party, an author is speaking with an attractive young lady. He says, "But enough about ME. What did YOU think of my new book?"

You might try something like that, but remember that the transmitter and receiver aren't very broad banded in the 148GTL... so in the "off" bands your power and receive will be severely limited. The further away you go from where the radio is tuned for, the worse it will be.

interesting experiment, though..

or

Voobsie, you have no sense of the surrealistic. These multiple-pill amps are much like the description of Orange County CA in one of the Watergate books, "Everything you ever hated about Indiana grown to grotesque proportions in the desert sun".

Multiple pill amps, be they for the local version of Spinal Tap (goes to 11 man) or the local Bowler keep repairmen in business replacing big expensive transistors that go 32 at a time in cascade failure. When you have made out the bill for 32 transistors at list, it is really hard to add a labor charge -- but you grin and do it anyway.

Input impedence matching is a bitch, output matching to anything resembling 50 ohms is a bitch and the various 'solutions' will give you a sense of never-ending hilarity. The heat density is so phenomenal that the only blower motor that has a prayer says Cummins on it even if the heat sink approaches adequacy (the bow section of an aluminum liberty ship for example). To put this in a box of any kind that does not have circulating R-10 or 11 and one hell of a condenser is ridiculous - conjugated to ridiculi, rediculorum.

As Mad Magazine once slightly modified an RCA ad, "At RGA Victim, the pride of ownership is second only to the expense".

You gotta learn to be more selective, man. This one does not deserve a response, just learn to whistle Loony Tunes.

Dick NBK

4285. Canadian CB Dealers

Newsgroup: rec.radio.cb
Date: 2001-07-11 13:20:50 UTC
From: DP <darrylperrin@nowherehotmail.com>
Message-ID: <SoY27.44677$TW.221705@tor-nn1.netcom.ca>
Source record: 88425

Just looking for some Canadian CB radio dealers with a website. The only one I have found to date is Durham Radio. Anyone know of others?

Many Thanks,

Darryl

>
Well, let's see here. I've been searching for only 10 minutes, and
while I haven't found a review, I did manage to find a mod page for
the radio. All you have to do to open the radio up for 26 to 30 MHz
TRANSCEIVE is move a jumper plug from one set of pins to another
inside the radio.

I thought it was against the law in the U.S. to sell radios that were
readily designed to operate illegally ... maybe an e-mail to the FCC
is in order.

4287. CB antenna for FM car stereo reciever?

Newsgroup: rec.radio.cb
Date: 2001-07-11 14:29:58 UTC
From: news@270.cjb.net
Message-ID: <a6bf83ba.0107110629.5bc837ba@posting.google.com>
Source record: 88427

I have an old truck and dont feel like drilling any new holes for a fm antenna. I have a 5' base loaded magnamount CB antenna already mounted. Can I use it for FM radio broadcasts? Also, what about using the same antenna for a mobile scanner antenna? If thats possible, what about using them both on the same antenna at the same time? Im not an antenna guru. I know enough to tune my antenna to my radio. Thats about it. Thanks for any help.

:)

Austin

A few observations:

1. If the RCI-2990 is a 10- and 12-meter ham-band radio, then take a look at this photo of the front panel and tell me if you see something interesting about the way the main tuning knob is labeled:

http://www.rangerusa.com/closeup2990dx-2.jpg

2. It's nice to see fine citizens such as "The Outlaw" using RCI's fine "amateur radio" products:

http://www.howdyneighbor.com/dfitch/cb/

3. In an earlier post in this thread, I questioned why a CB would need a frequency counter. Well, now I have to wonder the reverse -- if the ranger 29xx series are 10-meter radios, why does one current model -- the RCI-2980 -- have a CHANNEL display?

http://www.etronicsonline.com/images/Ranger/2980.jpg

Breaker 27.185 good buddy!

You can use switches on the PLL chips of the radio, but not much new
frequencies that way. The crystal method is the better idea. I did
one 10 years oga using switches, was a pain though.

Homer

Well just plug it in and try it. If it works good enough for your needs
you're done.

Not exactly. This is a public ng. If, as you say, clowns like artificial Aaron (not to be confused with artificial Rhonda) come only to troll, then that is their thing. If me, or anyone else responding to ridiculous things she posts, qualifies to you and your pink ladies as taking the "shiny, shiny, bait" as you say, so be it whatever you want it to be. To me, and others it is totally different. Artificial Aaron (not to be confused with artiicial Rhonda) is easy to debunk on everything and anything she says about cb, and I for one, take great pleasure in debating the anticbers, 'cause not one of them can stay on topic when questioned about their positions, or they get personal. To me that certainly qualifies the entire anticb brigade, you included, as not able to hold their own in a debate, with the exception of one of you who has a great deal to offer but is a horrible human being. Has nothing to do with your or their trollings, regardless what you were told to say."

On Mon, 09 Jul 2001 17:42:00 -0400, Jay in the Mojave <jay123a@qnet.com>
wrote:
Hello Frank:

Hello Jay. The post you are replying to is signed 'Aaron'. Are you
having the same identity problems as rubbah-hed?

"Heheh. Bless you my son, you may rise now and no longer kneel before
me. You mean the identity games you play continually? The ones where
your folly is "guess who I am, you don't know who I am, nyah ynah." The
one's where when you are stripped of all merit, you must say, "well, I
may be a troll and a loser and a liar, but you mistook me for someone
else, so there." LMAO! Don't flatter yourself. Again, no one gives a
damn who you are except you and the info gal."

What the hay, I'll answer it anywayz.
No with 12 million CB'ers in the USA, there is a minimum of 6 million
linear amplifiers, to even way more being used by CB'ers.
Figure 6 million amps using a min of 2 pills each, = Big Buck$.......
Say somewhere in the ball park of 24 million dollars plus, for starters.
Again just American CB Folk Lore, no national origination to back any
kind of numbers os statists.

Then where did your numbers and statistics come from?

"Ah yes. The proof you always require but fail to provide for others
when your own standards are applied to you. We know, Sparky, we know."

And how do the numbers for CB compare with the numbers for other
markets within the RF industry?
How do you think Motorola financed advanced research into VHF and UHF
high power transistors, Impedance Matching Techniques, and many other
independent R&D projects.
Military, NASA, and other government contracts and grants.
  Once the cash flow became apparent the upper brass, the
application notes became widely published.

So are you saying the development of RF technology became available
because of the increase in CB sales? I don't think so, Jay. Step back
and take a look at the big picture. CB radio has always been ten steps
behind state-of-the-art RF technology. Even today, with the advent of
VLSI and high-density monolithic design, in comparison, the newest
technology that CB radio has to offer is primordial goo.
Ever see MOTOROLA
advertised on a few racing cars, boats, and planes?
That statement reminds me of Harley's brief venture into the moped

market.

"And you remind me of the schoolyard bully who when stood up to and had his eye dotted, ran to the playground monitor and said someone was picking on you. Not relevant to cb, and not a one person gives a goat's lick about your personal feelings or opinions on anything."

Motorola has a large line of professional and commercial grade radio communication equipment, and they have been in the biz since long before CB radio. Their other product lines have included a wide variety of products in RF, audio, power and industrial electronics, as well as a significant share of the microprocessor industry. And their corporate holdings extend well beyond that. I really don't think Motorola spends a lot of it's advertising budget on CB radio. But then you might want to fabricate

"Complete insolence. You are a foul person."

...er, research some numbers just to be sure.
Also I think the Free Speech thing has a little to do with this, ah? I am sure the Constitution is somewhere on the net?
If you want to discuss the First Amendment, try a more appropriate newsgroup, like alt.free.speech. This one is about CB radio.

"Yep, but here you are talking about Harleys."

Post what you want where you want, but expect others to do the same, even if it is to tell you that you are off-topic.

"As I did in the beginning, as I do now, as I ever will do."

Jay in the Mojave

Your information is incorrect. No Jumper will modify this radio. You must be looking at the wrong thing. (big surprise!)

This radio cannot be modified for out of band coverage unless you have the "export" version which requires an electronic key. (A small pcb with a few surface mount components on it)

I keep having to educate you folks that "know so much" about these radios!

If you had a clue as to what is currently going on with this equipment, you wouldn't be displaying your ignorance here.

The RCI-2950DX, The RCI-2970DX are also models that CAN NOT be modified by jumper or an electronic key.

ASK Amateur Electronic Supply or Ham Radio Outlet. Their models WILL NOT MODIFY!!!!

You must have a different revision (export version) for it to even accept the modification key!

Darn it, When will you people listen?

Once again, Do proper research and LISTEN!!!!

Gee, I guess you never had an old ham radio with crystal positions that were marked CHANNEL!!!

Who cares! Lots of folks use the term Channel and frequency interchangeably although obviously incorrectly.

I suppose we should all complain about the radio that has "Clarifier" or "Fine Tune" written on the panel instead of the "Receiver Incremental Tuning (RIT)" control.

How about the Uniden HR2510 that so many old "hambones" consider a ham radio? It is labeled by channels. So do most of your Kenwoods, Icoms and the rest of that wonderful stuff when pertaining to memories frequencies. Since when is it a memory channel? I thought all this "superior" equipment only had memory frequencies? Its just terminology buddy, Get a grip!

Never mind, don't bother get a grip. Attitudes like this is what kills the attraction to ham radio anyway. Good work, keep it going. It's obvious no one can tell you anything. You already know everything about this equipment.

Open minded people are required to advance any hobby or technology. Try opening yours!

yeah leland. most young people dont have them or need them.

So long as they live at home with mom. 8-))

as for my woman, your still mad because i actually have one.

You're still too young to know yet but I'll give you a bit of advice
Tim.

"And I will correct it."

Women are far easier to get than to get rid of.

"Leland's translation: I was burned by a gold digger who I finally
realized did not even like me let alone love me, it was materialistic
things and my paycheck."

You can get them for almost nothing everywhere you look.

Translation: "I frequent 20 dollar streetwalkers."

The older they get, and especially if they have kids, they want a
"sugar daddy" to take care of them.

"Translation: I am so jaded in my woman hating ways. No females are
interested in me for just me."

Then later before

"Later before? That is an oxy,moron."

you know it, they think they own half of everything you got,

"Only the ones you ended up marrying."

and the courts will agree with them most of the time too.

Translation: "Each woman I married took turns cleaning me out."

Remember that women are the most expensive hobby you can have.

"You, apparently were never taught or learned how to get along with the
opposite sex, let alone how to treat them, hence your poor experiences
with them."

You getting tired getting of the "I have a headache" routine when you
want some yet?

"LMAO! That one stands on it's own."

Remember why a beer is better than a women? At least when you're done with the beer you can get your deposit back in those states that have it. And with a beer at least the headache is AFTER the fun.

"The above is only quoted and believed by those who are failures in the romance department."

Assumption #1: It is not my job to enforce the law.
Response: It is my legal right, moral responsibility, and independant choice to enforce any law I see fit to enforce. But I am not enforcing -- or breaking -- any law by posting in this newsgroup.
Assumption #2: I get upset about the law being broken.
Response: I do not get upset about any CB law being broken. On the contrary, the more RF pirates that break the law the better.
Assumption #3: The breaking of the law does not directly harm me, a friend, or a loved one.
Response: RF pirates affect me directly in my work.

RCI will build a radio for you to your specifications just like they do for Galaxy if you contract them to do so. Unfortunately, the radios you see in your second link are illegal imports. Galaxy radio doesn't even support the Galaxy Saturn or the Saturn Turbo in the American Market. Check out:

http://www.galaxyradios.com/techsupport.html

Copied from the above page:
"Please be aware that we are the importer of the Galaxy DX radios only, and our technicians do not service the Saturn, Saturn Turbo, Melaka, Pluto, Sirius or any Galaxy radios other than the DX models."

I looked around for quite a while, too.
Evidently Gordon West wrote and article in Popular Communications (January, 2001, I believe) regarding the 2970DX.
The article must reflect positively on RCI because RCI mentions it on their website. I have not been able to find this article online. All I can find is a brief description of it: "Gordon West stopped by Ranger Communications and 'picked up' a 2970DX and went marching off into the hills with it." I would be surprised if Mr. West actually hooked the rig up to a spectrum analyzer.
If someone *gave* me an RCI 2970 to write a product review I would certainly highlight the positive features and neglect to mention the negative ones. QST buys the products they review.

I would also like to mention that modern amateur HF transceivers (at least the ones I own) can be modified to transmit everywhere they receive (500 KHz to 30 MHz). The dealer will tell you how to do it, if you can prove you have a valid MARS/CAP ticket. As Dick mentioned; it's the licensee's responsibility to know his band limits.

It's not a pissing contest, Dick, (as much as ANYTHING can be not a
pissing contest in THIS newsgroup! LOL). It's more like setting
limits for an unruly adolescent. Train stomps around the NG bellowing
about how big and bad he is and how he can break laws and to hell with
everyone else he'll do what he wants. If no one calls him on this
behavior, he just gets worse.

ï¿½
FCC ISSUES REMINDER ABOUT HF TRANSCEIVERS
ï¿½
The FCC has issued a friendly reminder about those HF transceivers
ostensibly marketed for "amateur" use, but actually designed and
intended specifically for the so-called "freeband" radio operators,
who operate primarily in the 26 to 28 MHz frequency range.
ï¿½
In a May 13 Public Notice, the FCC points out that it's a violation of
FCC regulations to import or market a transmitter designed or intended
to operate outside the amateur bands unless the equipment has been
issued a grant of equipment authorization for the radio services it's
capable of operating. The FCC says it wanted to clarify its rules on
equipment that's "intended to operate in various radio services in the
high frequency radio spectrum, including '10-meter' Amateur Radio
Service (ARS) equipment." The notice--directed to "manufacturers,
importers, vendors and users of these transceivers"--emphasizes that
transmitters intended for use by FCC-authorized radio services except
the Amateur Radio Service must be type-accepted.
ï¿½
In the words of the Public Notice: "The Commission considers that the
transceivers discussed above are intended to be operated on
frequencies where the use of type-accepted equipment is required,
because of the simplicity of modifying them to extend their operating
frequency range."
ï¿½
The FCC also noted that it's illegal to import, market or operate a
transmitter that requires a grant of equipment authorization but for
which no grant has been issued, and that it's a violation to transmit
on frequencies allocated to a licensed radio service "without the
appropriate Commission-issued station license." Violators could be
subject to fines or imprisonment as well as equipment seizure and
forfeiture.--FCC

Look folks, Ranger makes OK CB radios. The 696 series, or whatever they are calling them are fine for CB usage. But, do not attempt to imply that the 2950, 2970, 2985, et al, are REAL ham radios. They are not, never have been, and never will be. They are a ruse, brought into this country as ham(snicker) rigs to get past customs. That's all. It's very similar to the black box cable TV descrambler industry. These are all test boxes.....yeah right! Get over it. \

They are fine for 10 meter FM usage.....IF you ad a tone board to them. They state that as an option. They don't even make one for them, nor do they have connections on the board for one. You have to wire them into the board yourself. SSB is also OK, as this does not require CTCSS.

You people touting these over-horsepowered CBs as ham rigs need to step back, take a deep breath, and accept things as they are.

Think I'll fire the blender up and have a couple of 'ritas.

Later.

Yes, I agree, it symbolizes the height of "dumb-tech". It's like
strapping together 32 lawn mower engines to make an Indy 500 racer.
It's something that Jethro Bodine might think up ("Uncle Jed! Look
what I did!").

Well, if this crap *stayed* in the realm of the surreal, things would be just fine. Unfortunately these contraptions are very real and their very real owners think it's a delight to use them on the air where they knowingly or unknowingly deliver very real interference on lots of very real frequencies other than 27 mHz.

And the smaller group of idiots who put 32-pill signals on the air occasionally provoke a larger group of idiots who think they must have 16 or 8-pill signals on the air all the time in order to compete (e.g. Tim Nebo). Both groups nurture a growing anti-social, anti-CB trend, which is to be king of the hill in the neighborhood.

So in this case, I think surrealism has very real consequences and therefore deserves a response.

Yes there all kinds of I.R.A.D. (Independent Research and Developement)
granted from Uncle Sam. But if private R&D is done and then presented,
this can prim the pump for further and more IRAD money.

Adjust R67 to to read 50 ohms with a 50 ohm dumml load hooked up.

Adjust R56 to read a SWR of 2 to 1, with a 100 ohm resistor at the
antenna terminals.

This is from MFJ, to calirate the MFJ 259B antenna analyzer.

>"Leland's translation: I was burned by a gold digger who I finally
>realized did not even like me let alone love me, it was materialistic
>things and my paycheck."

Nope. More like she had a "drinking problem". Also last August instead of seeing my sister for her birthday I drove her over to the main hospital in Royal Oak. She wanted to see her live in boyfriend of 7 years for the last time as they pulled the plug on his life support. He died from a failed liver from years of drinking. It took a few years after he developed liver problems and quit drinking, but it was way too late by then and just a matter of time. So go ahead Twisted, and make fun of it. Nothing like drinking, or drug abuse, to destroy relationships and lives.

>Translation: "I frequent 20 dollar streetwalkers."

Nope. If your a dead beat with a dead end job, like sweeping floors for example, nobody is going to want you. Women are not stupid, they want a guy who has a brain and a good job. So Twisted you take your women, or guy maybe in your case if there is any truth in it, to Mickey Dee's for a $5 burger and drink, then hit her/him up for some cash for gas because now you're broke.

>"Translation: I am so jaded in my woman hating ways. No females are
>interested in me for just me."

Nope. If a women is looking for a "sugar daddy" to support her and the kids, well that's what welfare is designed for.

>Translation: "Each woman I married took turns cleaning me out."

Go ask any attorney that practices "family law" if the guy normally gets the raw end of the deal most of the time.

>"You, apparently were never taught or learned how to get along with the
>opposite sex, let alone how to treat them, hence your poor experiences
>with them."

I get along with them just fine. I just stay away from the losers.

>You getting tired getting of the "I have a headache" routine when you
>want some yet?

>"LMAO! That one stands on it's own."

Sounds like you have a lot of experience in that department Twisted. So is that why the posts on this news group claim you do little boys now?

>Remember why a beer is better than a women? At least when you're done
>with the beer you can get your deposit back in those states that have
>it. And with a beer at least the headache is AFTER the fun.
>
>"The above is only quoted and believed by those who are failures in the
>romance department."

Yup. I read it from some other poor slob's site on the internet somewhere.

Source record: 88307

Twistedhed@webtv.net writes via email:
>"In defense of Jethro you forget that Granny made batches
>of moonshine liquor in the kitchen completely violating
>federal laws. Hahaha! Artificial aaron (not to be confused with
>Arificial Rhonda) needs to brush up on his TV watching or
>go back on the short bus with Frank, Dogie and girls"

It is true that in various BH episodes Granny made moonshine. What you may not have taken into account is the episode where she was confronted by federal agents who sought to shut down her operation. Milburn Drysdale's quick thinking saved the day. With the aid of Jed's millions, Granny was quickly set up as a taxpaying private distillery corporation bearing all necessary licensing and subject to periodic inspections. So Granny did, in the end, comply with the law.

I have recently been introduced to CB radios and was wondering a couple thing. If I had a handheld CB and attached a large antenna to it, does that affect my transmit range, or my receive range OR both? Is there a MAX height (or length of Coax)?

I'm sure this is all common knowledge to most. Perhaps there's a site on the web which can answer many of my questions.. Thanks in advance.

4320. Re: Just what motivates my posts?

Artificial Aaron (not to be confused with artificial Rhonda) whined:I
t's not a pissing contest, Dick, (as much as ANYTHING can be not a
pissing contest in THIS newsgroup! LOL). It's more like setting limits

"Hahhahah! And by some delusion you feel it falls to you to set limits
of your own standard, only you can't and it chaps your undies..heheh!"

for an unruly adolescent. Train stomps around the NG bellowing about
how big and bad he is and how he can break laws and to hell with
everyone else he'll do what he wants.

"Why does someone elses behavior bother you? None of you have been able
to answer this question."

If no one calls him on this behavior, he just gets worse.

"Worse than what? What is acceptable your standards? (chuckle) Go soak
your head.".

-Artificial Aaron-
(not to be confused with artificial Rhonda)

Assumption #1: It is not my job to enforce the law.
Response: It is my legal right, moral responsibility, and independant
choice to enforce any law I see fit to enforce. But I am not enforcing
-- or breaking -- any law by posting in this newsgroup.
Assumption #2: I get upset about the law being broken.
Response: I do not get upset about any CB law being broken. On the
contrary, the more RF pirates that break the law the better.
Assumption #3: The breaking of the law does not directly harm me, a
friend, or a loved one.
Response: RF pirates affect me directly in my work.

Nice speech, twist. But you failed to point out that you have never
questioned anyone about their positions. The only questions you ask
are sarcastic, psuedo-rhetorical, meaningless dribble intended only to
flame or troll. If you were to ever pose an intelligent, coherent and
relevant question, you would probably get a civilized response. Try it
sometime. Unless, of course, you are afraid of debating the issues
with facts and logic.

Now there's a new one -- a genetic predisposition to rebellion. There are actually many studies that confront the nature/nurture issue, and some of them have shown that some people are genetically prone to violence or alcohol abuse. These are weak defences in court, however, since humans are endowed with enough cognitive powers to inhibit most of our biological instincts, especially where the resulting offence requires willful premeditation.

To compare your RF pirating activities to the selfless acts of the American revolutionaries is just plain offensive -- these people fought and died for what they believed in. Unless you are willing to do the same, don't even compare yourself to them, twist.

Got any other lame excuses?

No high horse, here. Don't need it. I do the word barefoot just fine,
thank you. You say one thing, but the gist of the matter of late is you
either obey all the rules or you're a criminal. And I'm gonna shoot that
full of holes every time it comes up with some real merit and substance,
the same goes for talking above or below 40 if it ain't on the hammie
bands, quit yer belleyachin'! If your sole argument is splatter boxes,
say so. If yer of the mindset of some of our shakier resident boobs,
thats cool, too, but it is meritless.

1. Where is the ECU in the car?

2. Is the radio mounted close to it?

3. Is the radio a stock 4 watt unit?

4. Have you grounded the radio chassis to frame via shortest route?

5. Where are you taking power for the radio--fuse block or battery?

Tell us more--maybe we can help.

Its a leagle Cibernet 23 channel Kraco junker that stays mounted with a old +3M
>
>4. Have you grounded the radio chassis to frame via shortest route?
I have, switched to a heavy wire today as well as hard grounded the PCB to the chasses.
These radios were made for both positive and negitive grounds and "float" inside there metal cases.
The negitive lead and PL-259 had no continuety and was coupled via .01 disks.

Be kind to the tubs. Some were riveted construction and served fairly well. Most built by Kaiser were welded and had a habit of going in two directions at once as the stern passed the bow and a lot of crewmen that were admiring the new porthole.

The year I was born had no copper pennies. Tell you enough? I wasn't a baby, I was ration stamps. My dad was at Finschhafen New Guinea at the time on a camping trip with the Japanese.

Don't know,,,,,

According to all the experts on this ng, it's average entry level cb stuff.
I just know how well it worked for me when I had it.

I recently found a web page (store) that sells the k40 speech processor
radio, and the
advertisement seemed to make sense. - i.e. twice the power at 100%
modulation -
Works for me :)

I haven't had a chance to try out that radio yet :(

A larger antenna such as a mobile or base antenna will greatly improve range
over a rubber duck or telescoping antenna, when talking antennas length is
everything.
Coax attennuation is negligible on runs shorter than 100ft.
Always use quality coax such as Belden RG8-X or Times LMR-240 when building
a 50ohm
transmission line for 11meters.
High shielding <90%, Low attenuation >1.5db@27.185Mhz /100ft.,High Velocity
Factor <.78
These factors determine how effectively your signal is carried to the
radiating element (antenna).

George Washington was once asked for some advanced war information from
Martha.

Martha asks: "George what is happening with our troops?"

George replies: "Can you keep a secret?"

Martha replies: "Yes I can"

George replies: "So can I"

No, what I am saying is that the increased revenue from the RF
Transistor sales primed a few pumps, or started a Domino effect, that
was very well managed from Motorola's end.

Hello Adrian

I'll see what I can dig up. I have a friend in Australia, where 11 meter packet is big. I don't know why as their counterpart to our FCC is very vigorous in their enforcement efforts...yet, it's still quite popular "down under." Take care and 73.

> Ok if these numbers are high, what are the numbers?

As you noted anything here is a guess but starting with the 12 Million CBers (which seems awfully high BTW), something on the order of 40 percent are casual users (dig it out for travel to keep tabs on the Smokies on the annual trek to Wally World, etc., have it in the truck for winter days, or on the boat so the kids can BS.) They are going nowhere. Gives us about 7 million who might be on the 7 rig treadmill. Part of the question is how many are base and how many mobile. Given the sales of base rigs of late, it appears to be a mobile medium. Until skip blows it up, about half of the users are perfectly satisfied, or do not consider it a worthy investment, to run heat. So perhaps 3 million users are candidates for amps at all. You listen to the sidebanders more than I do, you have to because I don't. I don't envision sidebanders as being great candidates for amps; TS50s and Icom 760s perhaps but not footwarmers. So I would cut about a million out of that. The market may be two million and that will be satisfied over at least a five year period, plus maybe an equal time in the roof of the garage. So I would guess the annual volume would be somewhere within an octave of 300k units. That still strikes me as exceeding the production capacity of Joe's Mortuary and CB Amp Factory Inc. That is still a million units for Motorola et al.

And when one is in the mobile radio biz, you do have to protect it. But at the same time, Mother Motorola got into the transistor biz with a lot of help from Sam.

Simply put, people treat you the way you allow them to. If you let a
big brainless thug scream obscenities at you he gets the idea you find
his behavior acceptable. This is what's known as setting limits. You
might want to explain "limits of your own standard", since it's
unclear what concept you were trying to communicate there, Twisted.
(Or you may opt to simply abandon this thread like you do when the
questions get too tough)

That brings up a question I've been meaning to ask you, Twisted. What is an "anti-cber"? I contend that it is you. You are a perfect example of an "anti-CBer". I will explain.

CB is defined by FCC Part 95. For instance, Part 95 does not define CB as microwave spread spectrum transmissions. Hence, microwave spread spectrum transmissions are not CB. Part 95 does not define CB as SSB DX on 27.555. Hence SSB DX on 27.555 is not CB. In fact, Part 95 specifically forbids out of band operation and illegal power. They are not CB.

Those who admit to and encourage freebanding (like you do) oppose CB as defined by the law-abiding majority of CBers and the FCC. They are anti-CBers. You are an anti-CBer.

>was very well managed from Motorola's end.

That has nothing to do with the availability of application notes,
which is what you stated before. The technology already existed, all
Motorola had to do was retool a few dies.

Like I asked before, what is the market share from the sales of RF
transistors used in CB amps as compared to their other products used
in legal merchandise? When you look at that you will see that the
increase in revenue from transistor sales was only a small fraction of
the total, and CB amp transistor sales alone "primed" nothing. I'm
sure they take advantage of it, but like I also said, I don't think
they would notice the difference. At any one time, M has had two or
maybe three transistors in their catalog aimed directly at the CB
amplifier market. These are low-cost, low-efficiency and low-quality
transistors out of the hundreds of RF semiconductors they manufacture,
mainly because illegal CBers are too cheap to use anything with
quality components. It would be poor managment for M to dump their own
dollars into R&D when the technology already exists to make these
consumers happy and still earn a respectable margin. And since it
would only take a simple act of regulation to trash the market

completely, it would be absolutely foolish to shovel money into a
market that could conceivably disappear overnight.

No, Jay, you are wrong. Unless you can come up with some -real-
numbers (you know, the kind that are referenced and can be
independantly verified), you are just spewing BS.

Greetings, all.

Hope I'm not out of line or OT for the group. I picked up a Royce I-620 at the Goodwill today and I don't know much of anything about it. It's in fairly good condition, and has the microphone with it. Was $15 too much to spend on it? Or is this something that I can work with. What bands am I looking at? It says 23 channel / AM on the front. I searched Google and usenet and couldn't find any information about it.

Thanks!

Joe

Hey man, I politely took issue with your statement that (allow me to
paraphrase) "the lions share of CBers use amps". I could have called
it a pile of crap (which I think it is) but instead I asked for
factual substantiation.

Aaron

First off I'd like to apologize for the delay in this writing. I got called out to Raleigh for a couple of days. What motivates me to post the things I do is really very simple and not at all difficult to understand (eve you might get it Boobner). I have just gotten sick and tired of all the "anti" bullshit in the group and decided to shove the thing the hate most right up the ass of those who would like for this to be the group THEY WANT it to be and not the group that it is and has been. Who these jokers think they are to constantly bitch, moan, complain about something as silly as the topic of conversation in here is STUPID. This group has for YEARS been an OPEN forum for all and anything CB. Not too many really cared if it was legal or not. The whole purpose of this group is OPEN DISCUSSION! All the little nagging shit posted that this is illegal or that is a violation of this or that is not and has never been what this group has been about. To think that a few whiney do gooders would ever be able to turn this group into their own sterile 40 channel 4 watt group is just something I would or will stand for. While I am not the only person in here with an opinion, I choose to confront these people with the thing that so irritates them the most. While any of these losers can do is continue to say all I am doing is lining my pockets from all my "illegal" sales, to this I would have to say.....Not a single amp was sold although I did get over 75 E-Mails from people looking to buy one. Selling them was not the point of the exercise.....The point was and is there people out here that refuse to be told how to conduct themselves and are unwilling to be told what to do by some overzealous twit who happens to have a keyboard and access to this group. All the while these turkeys were flooding the group with their bilge, the majority of discussion was still able to occur much to the chagrin of those who tried so hard to see that the only thing this group could do was fight amongst ourselves. There has been a core to this group for years and most are still here reading and replying in mail to questions posed here as it keeps the bitching to a minimum.
As I just got in from NC, I'll check this thread out later in the morning.

Hi Joe,

No, you're certainly not out of line. I'm a pretty big fan of the old Royce line myself. While $15 is not a bad price for a used rig in good condition, your investment in a 40 channel radio might've been better. By all means, "work with it," and get the feel of rf communications to see if it's something you enjoy. If you feel that you'd like to pursue it further, then think about the following.

Take into consideration that you "might" find some rude (known as lids) and inconsiderate (using high power to the point of interfering with others) operators on the lower 23 channels, which are traditionally used for AM. If you decide to go a little further, then consider a 40 ch. SSB radio. SSB stands for single sideband and, without getting too technical, allows you to utilize more power by transmitting your signal more efficiently. These radios can be had, used and in good condition, for $30 to $300. I recently saw an ebay auction of an older Realistic (Radio Shack) SSB rig NOS or New Old Stock that ended at around $35. The best part is that NOS rig will put out 12 watts on sideband just like the $200 Galaxy or Uniden model. (To let you in on a little secret, that Realistic uses the same or similar chassis made by Uniden anyway.;-))

The commonly used sideband channels are 35 through 40 and although you may find a rude dolt or two there as well, the liklihood is greatly lessened. You''ll also likely hear stations from afar, I'll go into that in greater depth later. Suffice it to say that my ham callsign is a result of one of those far away stations. I'll provide two links below. The first is to ebay's CB section and the second will be to a specific auction that I feel illustrates my point re. an affordable SSB rig. Hope it helps and please feel free to contact me via e-mail, I may even have a spare rig lying around that might suit your needs to a tee. (No charge of course. The rig's not doing anything in the closet:-)) Take it easy and good luck.

4359. Re: Check Out New Radio: RCI-2985DX

Newsgroup: rec.radio.cb
Date: 2001-07-12 12:21:25 UTC
From: mdaffron@the-rma.org
Message-ID: <961fa007.0107120421.4eb8ad11@posting.google.com>
Source record: 88450
Cross-posted to: rec.radio.amateur.equipment,rec.radio.cb,rec.radio.swap

So, these radios are UNMODIFIABLE, huh? Well, another quick search resulted in my discovery of several places that sell these radios modified. A typical example, this one a fine, reputable dealer in Florida:

http://www.pinklightning.com/Ranger.htm

Oh, and sure -- they say the radios are "FOR EXPORT," just like you say! But wait! Let's read their disclaimer to see if they'll really ONLY sell the radios to foreign purchasers (and find out a little about what "peaking and tuning" really is)! Read the disclaimer -- I'm surprised they're comfortable advertising their illegal service on the Internet!

http://www.pinklightning.com/Peaking.htm

Sorry my friend, you can't convince me. These radios are glorified CBs that are designed to be modified. Otherwise, if Ranger is so interested in amateur radio, how come we don't see them selling any equipment for the other HF bands? After all, 10 will be dead again in a couple of years and their "supposed" market will dry up until the next sunspot peak comes around. (Radio Shack took their 10-meter rig off the market for a few years until things heated up again.) If Ranger REALLY is after the ham market, it seems it'd be more logical to sell a 160-10 meter HF rig -- or at least one that covers a few of the lower HF bands that'll be popular when the sunspot cycle wanes again.

RCI PRODUCES CB CRAP THEY DUMPING ALL THEIR GEAR IN THE ASIAN MARKETS. THEIR EQUIPMENT IS SOLELY REPSONSIBLE FOR THE TOTAL DESTRUCTION OF THE 10 METRE BAND IN ASIA AND PACIFIC. THEY STARTING TO PRODUCE EQUIPMENT THAT GOES AS HIGH AS 14 MHZ. THE PIRATES HAVE ALREADY STARTED AND HAVE HUGE NUMBERS NOW ON 20 METERS. NO HAM SHOULD BE SUPPORTING THESE COMPANIES.

IT MIGHT NOT BE APPRARENT IN NORTH AMERICA. BUT ITS ONLY A MATTER OF TIME ONCE IT GETS INTO SOUTH AMERICA. YOU MARK MY WORDS.

ALL THESE RADIOS CAN ME MODIFIED. THEY ARE MADE TO BE MODIFIED FULL STUP
THATS WHY ALL THE TRUCKERS AND CBERS HAVE EM.

NEXT TIME YOU SPEAK TO A VK ASK THEM HOW 10 METERS IS CRUDDED UP WITH ALL
THE INDONESIAN AND ASIAN PIRATES YSING RCI PRODUCTS.
THIS COMPANY IS A LOOSER AND NO HAM SHOULD PUT 10 CENTS INTO THEM. REALLY WE
ALL SHOULD BE CALLING FOR A HAM BOYCOTT OF THEIR EQUIPMENT

Which is just about the norm for credit cards these days. The low rates you see quoted are for limited times only, then you get hit with the full normal rates. Now days there are some things you just can't do with without a credit card, like get a rental car at the airport for one. If you don't like the high interest rates then you pay the bugger off each month. I did that for years and the credit card company just kept raising my limit. Now I can go out and by a new SUV and charge the whole thing on my card if I want.

The same can be said about those who advocate illegal operations too, i.e.
telling those same people it's OK to break the law by freebanding and using
amplifiers. Your comment cuts both ways Train.

So most all the H.F. "ham" rigs modifiable for 11 meter coverage. I guess we should consider all of them CB radios since they modify and are used by a lot of people on CB. I guess they are all glorified CB's too!

Yes you can see them posted on webpages by proud CB operators as their CB base station. Just because something can be modified for use where its not supposed to be, you want to out throw them out of the "ham" market.

Remember, Alinco didn't make anything but vhf and uhf equipment at first either so I guess they would be considered by you to be 2 meter band CB manufacturers and not "real ham equipment" because they didn't manufacture H.F. equipment. Of course they are "okay" now since they are selling H.F. stuff (by that standard anyway).

You folks are not interested in equipment, you are just fighting the classic ham verses CB war that everyone is tired of.
You are not fooling anyone but yourselves. If the equipment meets required specifications and is used on the amateur radio bands, the fact remains that it is amateur radio equipment. If it were illegal and not accepted by the FCC then I guess Amateur Electronic Supply, Ham Radio Outlet and all the big ham store's are just as guilty as your local CB or truck stop. There are great big gaping holes in all your arguments! All the radio snobs are just going to have to accept it. If you don't like it, don't buy it. Don't give us this bogus argument that its not ham equipment!

I never felt Icom or Alinco was qualified as quality ham equipment, but that's just my opinion. Your mileage with that stuff may very. I remember when Icom first came on the market. My brother in law, my sister and I are all licensed hams and we all have had Icom equipment. Every Icom we had with the exception of the old IC-2AT had their problems with quality, years later they have emerged as a pretty decent manufacturer. Yaesu and Kenwood have been around a long time before them and they had a much better reputation at the time. Hopefully the FEW open minded hams that are left may see Ranger bloom into a full fledged amateur product line company so people will have more choices. Most surviving amateur radio manufacturers are only still in business because they make commercial stuff also. If they relied only on the amateur market, they'd be gone along time ago. Fortunately, Ranger makes commercial and CB stuff and are diversified enough to survive.

Their six meter stuff will never modify to go on CB, neither will their vhf handhelds or rural telephony equipment. You guys are just prejudice, admit it!

Carry on folks, I'm just about tired of wasting my time with you.

YOU need to accept things as they are, especially when your next "Cadillac" line of amateur equipment manufacturer gets out of the business. Kenwood may go the consumer electronics only path. Remember, it's been recently (within the last 20 years?) that they got big into home and mobile audio. They have seen the light! With limited Amateur purchases they have diversified.

By the way, Ranger WILL install the boards for you. They are using standard Communication Specialists encoder products. They have realized with their new RCI-5054DX radio that this is a MUST for the FM repeater enthusiast.

Ranger has been "in the country" for many years marketing commercial and CB equipment. Go to their website and read about it!

I guess the FCC should REMIND Amateur Electronic Supply, Ham Radio Outlet
and numerous others if Ranger equipment is in this category then huh?

Source record: 88472

Sparky inquired: Nice speech, twist. But you failed to point out that you have never questioned anyone about their positions.

"While this may be true in instances, it is misleading at best. I don't think it is necessary to question the little anticber clique on their positions, just read their posts. You are so fond of drudging up old posts, why not post Dougs entry and the entire antiBS when it started here? When one asks a question about mods, and Doug comes back and says" You're a fag *#@&sucker", most of us can figure out his "position". Same goes for the others when they make a point and someone grills them on it and they call names, I feel that also states their position. No one even minded the "legal" club with the aliases, etc., etc., but they turned nasty, spammed, flooded, etc., had some fire returned their way, and couldn't handle it. Yea, Sparky, it is a classic case of dishing it out but can't take it."

The only questions you ask are sarcastic, psuedo-rhetorical, meaningless dribble intended only to flame or troll.

"Wrong again as usual. They are never designed as trolls or flames. Critical, yes, especially to the wannabe cb and thought police."

If you were to ever pose an intelligent,
coherent and relevant question, you would probably get a civilized response.

"No. You guys pick and choose what to answer."

Try it sometime.

"Ok. Once again, a question you refuse to answer...you have made countless accusations against those who violate or would violate Unca Sam's communication laws and made your feelings known about those individuals. Now that Leland was shown to have violated federal law, I wish your opinion on the situation. Is he a faggot for doing so like the antis accused so many others of being for seeking a mod? He just posted about his disdain for women. Do I have to share the distinguished title of "keyclown" with Leland now? Lest your memory is foggy today, Leland seeked illegal mods for FRS radios to get ham bands and also sought a way around federal housing laws in order to construct an antenna. Many of Leland's statements directed at cbers since those posts proved hyper-hypocritical, no?"

Unless, of course, you are afraid of debating the issues with facts and logic.

"Unfamiliar territory for you. "

Assumption #1: It is not my job to enforce the law.
Response: It is my legal right, moral responsibility, and independant choice to enforce any law I see fit to enforce. But I am not enforcing -- or breaking -- any law by posting in this newsgroup.
Assumption #2: I get upset about the law being broken.
Response: I do not get upset about any CB law being broken. On the contrary, the more RF pirates that break the law the better.
Assumption #3: The breaking of the law does not directly harm me, a friend, or a loved one.
Response: RF pirates affect me directly in my work.

Artificial Aaro (not to be confused with artificial Rhonda) said: That brings up a question I've been meaning to ask you, Twisted. What is an "anti-cber"? I contend that it is you. You are a perfect example of an "anti-CBer". I will explain.
CB

"No. AMERICAN cb is defined as such. I will allow you that. And before you ask, there exist places that are not governed at all concerning cb and no I won't do the work for you, find it yourself (hint: start with the Isles and work backwards). If it can be tied in with cb, utilized, split, transmitted, received, etc., etc., it is pertinent to discuss whether you agree or not. Legalities actually have nothing at all to do with the discussion of cb, what can be done to a cb, etc., unless specifically addressed, and you attempt to profess law in all your posts, especially when the poster asked nothing of the law. As usual, you are wrong again."

is defined by FCC Part 95. For instance, Part 95 does not define CB as microwave spread spectrum transmissions. Hence, microwave spread spectrum transmissions are not CB. Part 95 does not define CB as SSB DX on 27.555. Hence SSB DX on 27.555 is not CB. In fact, Part 95 specifically forbids out of band operation and illegal power. They are not CB.
Those who admit to and encourage freebanding (like you do)

"How can someone live to be an age like yours and accumulate so little in the way of knowledge and sense over the years? Amazing."

oppose CB as defined by the law-abiding majority of CBers and the FCC. They are anti-CBers. You are an anti-CBer.
-Aaron-

Artificial Aaron (not to be confused with artificial Rhonda) said:
Simply put, people treat you the way you allow them to.

"While this holds true in some instances, this has nothing to do with what was being discussed.You are sticking your beak in where no one has even addressed you. You YNN account and Google account was pulled and you pop up out of nowhere and claim you were being mistreated? HAHAHH!"

If you let a big brainless thug scream obscenities at you

"No one was addressing you. Again, you came out of nowhere and are trying to set standards..hahaha! Poor guy."

he gets the idea you find his behavior acceptable. This is what's known as setting limits. You might want to explain "limits of your own standard", since it's unclear what concept you were trying to communicate there, Twisted.
"Sure Leland, as soon as you get back to what we were talking about..you attempting to control speech."

(Or you may opt to simply abandon this thread like you do when the questions get too tough)
  for an unruly adolescent. Train stomps around the NG bellowing about how big and bad he is and how he can break laws and to hell with everyone else he'll do what he wants.

"Why does someone elses behavior bother you? None of you have been able to answer this question."

See above.

"You didn't answer it. You made an analogy that didn't apply and avoided the question, Leland."
"
    If no one calls him on this behavior, he just gets worse.

"Worse than what? What is acceptable your standards?

See above.
(chuckle) Go soak
your head.".

Glad to see you're up on the latest schoolyard taunts.

-Artificial Aaron-

"Go soak your head."

Assumption #1: It is not my job to enforce the law.
Response: It is my legal right, moral responsibility, and independant choice to enforce any law I see fit to enforce. But I am not enforcing -- or breaking -- any law by posting in this newsgroup.
Assumption #2: I get upset about the law being broken.
Response: I do not get upset about any CB law being broken. On the contrary, the more RF pirates that break the law the better.
Assumption #3: The breaking of the law does not directly harm me, a friend, or a loved one.
Response: RF pirates affect me directly in my work.

Now there's a new one -- a genetic predisposition to rebellion. There are actually many studies that confront the nature/nurture issue, and some of them have shown that some people are genetically prone to violence or alcohol abuse.

"Which would hold true for what I just stated, TYVM."

These are weak defences in court,

"Whoa! What does that have to do with anything? We are not talking about a defense for the actions."

however, since humans are endowed with enough cognitive powers to inhibit most of our biological instincts,

"Really? I don't agree, I think it's about dead even. If you wish information on theorem suggesting other than what you claim, take it to email."

especially where the resulting offence requires willful premeditation.

"Agreed."

To compare

"But I didn't compare them. I cited reasoning based on a country born of rebellion. Nothing to compare."

your RF pirating activities to the selfless acts of the American revolutionaries is just plain offensive -- these people fought and died for what they believed in. Unless you are willing to do the same, don't even compare yourself to them, twist.

"You, sir, are the about the last person here I would ever choose to discuss my patriotism with, for the simple reason you have not a clue what it entails."

Got any other lame excuses?
==========

"You surprised me here, Sparky. I assumed you would comprehend it. It is obvious you are unable."

How do you jam a vhf and uhf public service band with 27 MHz CB equipment?

A lot of ignorant CBers think they can, but most of them never heard of a duplexer or any kind of tuned cavity.

Since when do Ham radio operators "have a right" to radio frequencies and CBers and other citizens don't?

"Hams" haven't really written rules for anyone but themselves thank goodness. (And most of them don't follow their own either!)

Ever heard a 5K amp run on 75 or 20 meters? Surely not! HA!

Here we go, CB verses Ham again and again and again and again and again and again.....

Not a right - a privilege. CB'ers are given their privilege in their respective band, and amateurs have theirs in others.

By getting the appropriate license, you can have the privelege of access to these other frequencies.

If a person does not understand why they need to achieve knowledge to operate in these other bands, then the process of acquiring it will show them some of the reasons for regulation of the privilege.

We have to be careful who and what we attack or
we may fall prey to our own snares.

1) Ham radios need not be "type accepted" because
they are intended for operation by licensed Hams.
Hams and prospective hams have always needed
to build, buy or modify equipment in order to learn
about ham radio and be able to participate. The fact
that the ham is assumed to be able to build, modify
or adapt equipment from other services, places the
sole responsibility for proper operation on the licensee
rather than the radio. It is understood that ALL radios
can be modified to operate in an unauthorized manner.

2) Radios intended for use on CB or other
commercial "channels" such as marine, must be
"type accepted" for their intended use, and must not
be tampered with in a way that might result in improper
operation. In fact there has been a move to limit
responsibility only to the manufacturer. Hence,
Cell, Nextel and a host of emerging technologies
that require remote customer activation and time
charges. This is because of numerous complaints
by those who can't get a word in otherwise.

3) Traditionally, "good amateur practice" was the
standard for spectral purity and operations, although
the abuse of 10, 11 and 12 meters by non-hams who
have found this loophole to exploit, has resulted in
tighter restrictions.

4) With the advent of the no-code ham license,
perhaps it is no longer necessary for prospective
hams to be able to buy radios until after they are
licensed, stamped, blued,glued, tattooed and boo-
hooed by every police, political and security agency
in the world (sorry, I got carried away).

The point is, there are no illegal Ham Radios (except for
a few exceptions that don't really apply to hams) only
illegal Ham Radio operators. We are all tested on our
band privileges. But, There are no illegal CB (or
commercial) operators because they are untrained and
assumed to be unable to distinguish right from wrong?
Only equipment and the manufacturers and suppliers

are held responsible for "allowing" the operators to
"inadvertently" operate outside their authorizations.

"cmcmanus" <cmcmanus@charter.net> wrote in message
news:tkrcannd1mb562@corp.supernews.com...
: So most all the H.F. "ham" rigs modifiable for 11 meter coverage. I
guess we
: should consider all of them CB radios since they modify and are
used by a
: lot of people on CB. I guess they are all glorified CB's too!
:
: Yes you can see them posted on webpages by proud CB operators as
their CB
: base station. Just because something can be modified for use where
its not
: supposed to be, you want to out throw them out of the "ham" market.
:
: Remember, Alinco didn't make anything but vhf and uhf equipment at
first
: either so I guess they would be considered by you to be 2 meter
band CB
: manufacturers and not "real ham equipment" because they didn't
manufacture
: H.F. equipment. Of course they are "okay" now since they are
selling H.F.
: stuff (by that standard anyway).
:
: You folks are not interested in equipment, you are just fighting
the classic
: ham verses CB war that everyone is tired of.
: You are not fooling anyone but yourselves. If the equipment meets
required
: specifications and is used on the amateur radio bands, the fact
remains that
: it is amateur radio equipment. If it were illegal and not accepted
by the
: FCC then I guess Amateur Electronic Supply, Ham Radio Outlet and
all the big
: ham store's are just as guilty as your local CB or truck stop.
There are
: great big gaping holes in all your arguments! All the radio snobs
are just
: going to have to accept it. If you don't like it, don't buy it.
Don't give
: us this bogus argument that its not ham equipment!
:
: I never felt Icom or Alinco was qualified as quality ham equipment,
but

: that's just my opinion. Your mileage with that stuff may very. I
remember
: when Icom first came on the market. My brother in law, my sister
and I are
: all licensed hams and we all have had Icom equipment. Every Icom we
had with
: the exception of the old IC-2AT had their problems with quality,
years later
: they have emerged as a pretty decent manufacturer. Yaesu and
Kenwood have
: been around a long time before them and they had a much better
reputation at
: the time. Hopefully the FEW open minded hams that are left may see
Ranger
: bloom into a full fledged amateur product line company so people
will have
: more choices. Most surviving amateur radio manufacturers are only
still in
: business because they make commercial stuff also. If they relied
only on the
: amateur market, they'd be gone along time ago. Fortunately, Ranger
makes
: commercial and CB stuff and are diversified enough to survive.
:
: Their six meter stuff will never modify to go on CB, neither will
their vhf
: handhelds or rural telephony equipment. You guys are just
prejudice, admit
: it!
:
: Carry on folks, I'm just about tired of wasting my time with you.

4394. same old story (and some recommendations)

Newsgroup: rec.radio.cb
Date: 2001-07-12 16:47:36 UTC
From: Eric Oyen <n7zzt@hotmail.com>
Message-ID: <3B4DD4A7.D5C6B21F@hotmail.com>
Source record: 88485

well,
I've been away working for a while and didn't have a lot of time to
even pay attention to things here. However, I've noticed that things
are pretty much the same.

you have 1 group thats acting like netcops, another thats always
insulting
each other, and a few with illegal stuff for sale and some that are
looking
for ways to boost power, modulation and range from their sets.

To this last group, I say the following:

increasing your power may not do a lot of good if conditions won't
permit the increased range. also, there are regulations in place for a
reason.
increasing your modulation into "cutoff" only serves to make your
station
dirty and doesn't improve anything. if you guys were smart, you'd start
with the following methodology:

1. examine the antenna. make sure it is operating at peak performance.
don't buy one of those antennas that makes claims of ultra-high
gains.
anyone with a few braincells knows that such claims are bogus.
standard ground-plane devices (or ringo type loaded antennas) serve
the
base station rather well and are easy to maintain (not to mention
relatively
cheap). if you want high gain, you'll have to spend some cash and get
a beam.
your requirements may vary depending on space limitations, local
CC&R's
and other considerations. choose wisely. the best stations often have
good
antenna systems!

2. look at the coax... the cheapy rg-58/u is fine for short runs under
30 feet.
any longer than this and loss becomes a major factor in station
design.
Lower loss cable (such as rg-213/u) may cost loads more, but is
designed
for low loss and high durability. also, make sure then ends are
properly
soldered (a cold solder joint can make or break a good station)

3. ground. as with any other concern, a good ground is a MUST. simply hooking
into the electrical ground of your house is not sufficient as the length of ground
wire is significant at the 11 meter band. I recommend reading up about grounding
issues in the ARRL antenna handbook.

4. the radio. a cheap cb radio can only do one thing: make noise! a better quality model
generally performs much better, sounds cleaner and is far less of a headache
than you would think. however, don't go trying to "peak & tweak" your set as
its already tuned for optimum performance. also, ONLY QUALIFIED PERSONELL
should ever open and modify your set (for repairs, etc). make sure the technician
working on your set is properly qualified (by having an FCC general communications
license). if he doesn't, then move on. most CB problems are the result of unqualified
and unlicensed technicians doing work to the radio that isn't needed, or may cause
additional problems....

lastly, never take "on-the-air" radio reports at face value. too many people with too
many different radios/antennas/etc. may read back misleading results. as is most
often the case, most radios in use are often modified to such an extent that any
readings they may give cannot be trusted.

a few books are required reading for those serious about running the best stations
they can:
1. the arrl antenna handbook
2. the arrl interference guide (yes, definitely a must to keep your neighbors happy)
3. other arrl publications as needed.

oh yeah, almost forgot, don't forget a good RFI filter (not ones of those cheap jobs either!).

I was wondering if anyone out there does custom work with handheld mics? I keep having to switch mics on my Sidewinder 400 in the car between a Road Devil NC power mic when I stay on channel 38 USB and the stock mic for when I want to use the up/down buttons to scan AM. Will pay $100 for someone to buid my a red Road Devil mic with up/down channel buttons mounted in the top that will work with the Sidewinder 400. I can supply a stock Sidewinder 400 mic if needed for proper wiring info and buttons. Thanks

Damn straight. The FCC should send a letter of notice to the legitimate
ham dealers informing them that the RCI rigs are illegal junk, and follow
it up with a visit to the Ranger manufacturing and distribution facilities
to close them down, sieze the inventories, and prosecute the principals.
While they are at it, they should do likewise to Copper Electronics and
it's principals...

Ham rigs do have to meet FCC approval before they can be sold in the US (see back cover of December 2000 QST ad for Kenwood TS 2000). New models must meet certain spectral purity requirements. They don't call this "type acceptance" but many hams refer to it as such.

Right. Amps for amateur use cannot be sold to operate "out of the box" between 24 and 50 MHz (or something like that, I don't have the regs in front of me). Most, however, can be modified to pick up 10 and 12 meters.

I'm not sure if I follow this point. You mean that one should have a ham ticket in order to buy any ham tranceiver?
>

Right. At least as far as CB/commercial equip goes. The ham must be sure he is in compliance with FCC rules. The radio won't do it for him.

I agree, exactly the point I was trying to make.

Hello Leonard Bailey:

What type radio, antenna, and amp do you have?

It will help us to help you, if you can tell us more about the radio system installation.

Is this a mobile or base staion.

How is the radio feed for power, antenna, ect?

How is the amp wired?

How is the antenna installed, where, and how.

Why do you say it ain't gettin out?

The good folks here on the ng will hep ya out!

I agree!
Just remember that frequencies are like a "natural resource" and Hams are
not the radio spectrum police!
The FCC currently has that jurisdiction (Only in the US).

I don't see what in the heck this has to do with the original arguement over
Ranger making a radio for Ham use and a bunch of soreheads pitchin a fit
over it! If it meets the specs and is used correctly, what is the deal?

One little difference here:

AES, HRO and other ham dealers will only perform MARS/CAP mods if you bring in a copy of the license that authorizes it. In comparison, I have found several CB dealers on the Web that will perform these mods for anyone and everyone, regardless of their justification for doing so. Sure, you can't control what people do in their workshops at home, and many hams do "open up" their radios. I'm not saying hams are any better or worse than CBers as people. But when "authorized dealers" offer to perform illegal modifications in-house for anyone with a couple of bucks, there's a problem. You will NEVER see HRO, AES, Texas Towers, Burghardt's or any other ham dealer ADVERTISING that they'll perform mods for you -- even if it's "at your own risk." I dare you to go surfing and try to find one.

And I was mistaken -- it's Ranger's RCI-2950 that employs a jumper plug that you move from one set of pins to the other to perform the out-of-band mod. But my logic still stands: it's against U.S. law (and I'm pretty sure it applies to CBers as well as hams) to sell a radio in this country that is readily modifiable for non-type-accepted use. With most, if not all, of the type-accepted ham gear you see out there, there are mods -- but you have to be fairly adept with a soldering iron and surface-mount technology these days to perform them.

I wouldn't be so quick to slam ICOM -- they have one of the highest reputations in the ham community today. In fact, I've been a Kenwood man for all of my 20 years of hamming (TS-530SP, TS-440S, TS-850S, TS-570D) until now. Last month my TS-570D got taken out by lightning, and I replaced it with an ICOM IC-746. It has a full-duty-cycle rated amp -- do you know what that means? Yaesu can't make that claim with their competing FT-920 rig, and the rig has far more features for the money than a TS-570S.

Alinco's not a bad brand -- yeah, there was resistance to the new name at first, about 10 years ago, but I think they've established themselves as a decent competitor in the ham market. But you're right -- they don't make any high-end HF stuff -- yet. But they made some of the best and most affordable dual-band VHF/UHF mobile equipment in the early 90s!

Lots of "real" hams have modified CB and business band radios to operate on the two, six, ten and seventy centimeter meter ham bands. Whether or not a radio is a CB radio or not is irrelevant to hams. The manufacturer has to worry about FCC approval in order to sell new amateur gear, not the amateur radio operator. I'll use any radio I please and I will make it conform to the FCC's prescribed emission standards.

The world is changing and lots of people aren't coping very well with the changes. I'm one of them. It merely depends upon the topic of discussion at the moment. However, RCI does not bother me in the least. Obviously, there is a market for their products. Just as obvious is the fact that if RCI wasn't fulfilling that need, someone else would. Boycotting RCI is pointless. I don't buy their stuff anyway. I had a 2970 for a while. I wasn't impressed. I attribute the experience to suffering a major brain fart. RCI is history for me anyway and the brain fart is over. At least until the next one.

Yes, there are pirate stations operating on the ham bands. So what? You can't stop them. Our FCC can't stop them. The Indonesian, Mexican and Australian governments can't stop them, just to name a few. So why is anyone worrying about it? Instead of allowing yourself to get upset over something you are powerless to change, how about finding something to do that makes you happy?

I came very close to selling all of my amateur radio equipment a while back. Close enough to know that if I get too upset again because the world isn't the way it used to be, I can always sell it for real. To put the icing on the cake, I have purchased two brand new HF/VHF/UHF combo rigs this year. I'm not happy with either one. Things have changed. So what? The world doesn't care.

If I cannot find some enjoyable aspect to amateur radio in a while, everything will go bye-byes for good. I've always wanted to cast my own small statues and trinkets (lost wax). I think I may give that a whirl if being a ham no longer appeals to me. Life is too short to be miserable. Sometimes it IS best to walk away and start over again. At least that way the ones left enjoying the hobby won't have to hear you

whine. (not directed at those whose posts I tagged along
with)

Train. If you support "open discussion" then why is it you want to
squelch me everytime I bring up the fact that what you are doing is
illegal? Open discussion protects MY rights as well as yours.

If you had any sense at all, you could see that I cannot stop you from
posting your opinion about illegal CB. When I rebut your opinion, you
have the option to simply ignore me.

But no, you do not have the maturity to do this. Instead, like some
spoiled child, you fly into a rage. You seek to SILENCE me completely.
Is this what you do on CB? You cannot tolerate a person who does not
agree with you so you seek to eliminate them?

> All the little nagging

Hey, Ding Dong. You want to discuss illegal CB, go ahead, but expect
criticism. You want to sell illegal stuff on the NG, go ahead, but
expect to be ratted out to ISP's and FCC.

> While I am not the only person in here with an opinion, I choose to confront

Your "core group" seems to exclude people who are not interested in
breaking FCC laws. That's not exactly an OPEN DISCUSSSION policy is
it?

Now we are starting to make a little sense. Icom is making okay stuff now, they weren't too great initially. Give Ranger communications the same chance Alinco got. I personally am a fan of the Kenwood stuff, I am beginning to wonder about them though. I agree that the newer Yaesu stuff is a little flaky. I played with the FT-847 and was not impressed at all.
I personally use a Kenwood TS-50S, TM-733A, TS680S as well as RCI-2970DX and various Alinco handhelds. Lets just not blame Ranger for the communication worlds problems.

Another point though is that almost none of the Ham equipment is any harder to modify for General coverage than the Ranger stuff. Think about this, If you modify a general coverage H.F. ham radio, you can interfere with a whole lot more than 10 or 12 meters and a bunch of hams. So who is the most irresponsible, the manufacturers of 10 & 12 meter equipment that can only expand to a small spectrum or the wonderful folks at Icom, Kenwood, Yaesu and the rest that only require the snipping of a diode or some other simple mod and you can screw up any frequency you want from about 1.6 to 30Mhz !!! How about the vhf & uhf stuff that will cover any public service freq from at least 138-174MHz and 400 to 470 or more? Which company's products have the most potential to be abused? See what I have been trying to tell you. It's all a bunch of hypocrisy! If you go by this thinking, I guess all their equipment should be banned! Actually, if it weren't for lawsuits you would still have to show an Amateur Radio license to purchase equipment. But now any fool can walk into your local wonderful Radio Shack and buy a radio and screw up the local 2 meter band if not others!

You Can't Blame The Manufacturer, Only The End User!!!!

ï¿½
FCC ISSUES REMINDER ABOUT HF TRANSCEIVERS
ï¿½
The FCC has issued a friendly reminder about those HF transceivers
ostensibly marketed for "amateur" use, but actually designed and
intended specifically for the so-called "freeband" radio operators,
who operate primarily in the 26 to 28 MHz frequency range.
ï¿½
In a May 13 Public Notice, the FCC points out that it's a violation of
FCC regulations to import or market a transmitter designed or intended
to operate outside the amateur bands unless the equipment has been
issued a grant of equipment authorization for the radio services it's
capable of operating. The FCC says it wanted to clarify its rules on
equipment that's "intended to operate in various radio services in the
high frequency radio spectrum, including '10-meter' Amateur Radio
Service (ARS) equipment." The notice--directed to "manufacturers,
importers, vendors and users of these transceivers"--emphasizes that
transmitters intended for use by FCC-authorized radio services except
the Amateur Radio Service must be type-accepted.
ï¿½
In the words of the Public Notice: "The Commission considers that the
transceivers discussed above are intended to be operated on
frequencies where the use of type-accepted equipment is required,
because of the simplicity of modifying them to extend their operating
frequency range."
ï¿½
The FCC also noted that it's illegal to import, market or operate a
transmitter that requires a grant of equipment authorization but for
which no grant has been issued, and that it's a violation to transmit
on frequencies allocated to a licensed radio service "without the
appropriate Commission-issued station license." Violators could be
subject to fines or imprisonment as well as equipment seizure and
forfeiture.--FCC

The only people that would suffer from having
"thinly-disguised-as-ham-radio illegal extended-coverage CB rigs"
pulled off the market or severly restricted are the freebanders and
outlaw CBers that they are designed for.

Get rid of the amplifier.

But they're not illegal. Why would the FCC want to do that? These radios are no more illegal than a screwdriver or a hammer. Both of the aforementioned items make good murder weapons, however, neither is illegal until they are used in the commission of a crime.

Funny how easy it is to obviate "personal responsibility." Perhaps the same effort could be levied upon the FCC to get off their collective you-know-whats and enforce their regulations. Novel idea. <:-0

Get rid of the amp. It's not neccesary. I reprint (below) Eric
Oyen's very good suggestions. Hope they help you.

-Aaron-

Increasing your power may not do a lot of good if conditions won't
permit the increased range. also, there are regulations in place for a
reason. increasing your modulation into "cutoff" only serves to make
your
station dirty and doesn't improve anything. if you guys were smart,
you'd start
with the following methodology:

1. examine the antenna. make sure it is operating at peak performance.
don't buy one of those antennas that makes claims of ultra-high
gains. anyone with a few braincells knows that such claims are bogus.
standard ground-plane devices (or ringo type loaded antennas) serve
the base station rather well and are easy to maintain (not to mention
relatively cheap). if you want high gain, you'll have to spend some
cash and get
a beam. your requirements may vary depending on space limitations,
local
CC&R's and other considerations. choose wisely. the best stations
often have
good antenna systems!

2. look at the coax... the cheapy rg-58/u is fine for short runs under
30 feet.
any longer than this and loss becomes a major factor in station
design.
Lower loss cable (such as rg-213/u) may cost loads more, but is
designed
for low loss and high durability. also, make sure then ends are
properly
soldered (a cold solder joint can make or break a good station)

3. ground. as with any other concern, a good ground is a MUST. simply
hooking

into the electrical ground of your house is not sufficient as the length of ground
wire is significant at the 11 meter band. I recommend reading up about grounding
issues in the ARRL antenna handbook.

4. the radio. a cheap cb radio can only do one thing: make noise! a better quality model
generally performs much better, sounds cleaner and is far less of a
headache
than you would think. however, don't go trying to "peak & tweak" your set as
its already tuned for optimum performance. also, ONLY QUALIFIED PERSONELL
should ever open and modify your set (for repairs, etc). make sure the technician
working on your set is properly qualified (by having an FCC general
communications
license). if he doesn't, then move on. most CB problems are the result of unqualified
and unlicensed technicians doing work to the radio that isn't needed, or may cause
additional problems....

lastly, never take "on-the-air" radio reports at face value. too many people with too
many different radios/antennas/etc. may read back misleading results. as
is most
often the case, most radios in use are often modified to such an extent
that any
readings they may give cannot be trusted.

a few books are required reading for those serious about running the best stations
they can:
1. the arrl antenna handbook
2. the arrl interference guide (yes, definitely a must to keep your neighbors happy)
3. other arrl publications as needed.

oh yeah, almost forgot, don't forget a good RFI filter (not ones of those cheap jobs either!).
